[1] Popular items appear in BOLD print and are usually in stock at authorized Ohmite stocking distributors. Items appearing in LIGHT FACE print are available from stocking distributors but are not normally stocked in depth. Parentheses indicate non-stock standard items subject to a minimum handling charge per item.

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® type 270 vitreous enameled fixed resistors

These lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel — the time-proved standard covering that is the best conductor of heat for a material which must also be a good electrical insulator.

Resistance tolerance is ±5% for values 1 ohm or higher; ±10% below 1 ohm.

Wattage ratings are for use in free air. When resistors are mounted in closed spaces or where the circulation of air is restricted, they should not be used at more than one-half rating. Currents and voltages for reduced ratings can be obtained by multiplying full rating by the following factors: 75% load = .86, 66% = .81, 50% = .71, 33% = .57, 25% = .50.

Higher wattage resistors are available on a custom manufactured basis, for information, request copy of catalog 101.

These items are also available on special order, with non-inductive windings, (Aryton Perry).

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® dividohm® type 210 adjustable vitreous enameled resistors

"Dividohm" resistors make ideal voltage dividers for original equipment and replacement in transmitters, rectifiers and other apparatus. Such tapped "bleeders" are made by using one or more adjustable lugs, as required. "Dividohms" are also handy for obtaining odd resistance values, for adjusting circuits, and for use on equipment which must be set to meet various line voltages.

"Dividohm" resistors are vitreous enameled resistors on which a narrow strip has been left uncovered to expose a portion of each turn. Contact to any wire in this strip is made by an embossed contact on the adjustable lug (supplied).

WATT RATING: **The stated wattage rating applies only when the entire resistance is in the circuit.** When the adjustable lug is set at an intermediate point, the wattage rating is reduced in approximately the same proportion, i.e., if the lug is set at half the resistance, the wattage is reduced by one-half. A safe rule to follow is to make sure that the maximum rated current is not exceeded. This should be carefully checked particularly if the resistor will be used as a voltage divider with several adjustable lugs. Resistance tolerance is ±10% for the total resistance value.

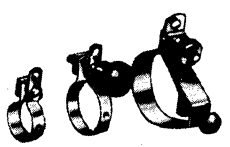
adjustable lugs

One "Screw Driver Type Adjustable Lug" is supplied with each unit. Lugs with a silver contact button can be ordered from the table shown below.

MOVING THE LUGS: Lugs always should be loosened completely before moving and not moved except while the current is off, in order to protect the exposed wire from mechanical or electrical injury and to protect the operator from dangerous voltages.



STANDARD

Core Diam. Inches	Screw Driver Type New Cat. No.	Screw Driver Type Old Cat. No.	Bakelite Knob Type New Cat. No.	Bakelite Knob Type Old Cat. No.

DOUBLE THUMB SCREW ADJUSTABLE LUG

This adjustable lug, which is illustrated at left, features two advantages — ease of adjustment and less chance of damaging the resistance wire while moving lugs. Available for 1⅛″ cores. Catalog No. **2160**

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® LO-MITE and other low resisitance wire-wound resistors

SERIES 99L LO-MITE

SPECIFICATIONS

Tolerance: ±5% std. Other tolerances available.

Temperature Coefficient:

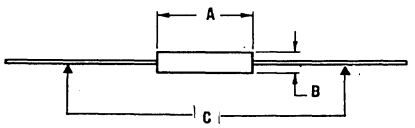
	Max. Temperature Coefficient
.005 — .009 ohms	0 ±600 ppm/°C
.01 — .019 ohms	0 ±300 ppm/°C
.02 — .029 ohms	0 ±175 ppm/°C
.03 — .039 ohms	0 ±125 ppm/°C
.04 — .09 ohms	0 ±100 ppm/°C
.1 — 1.0 ohm	0 ± 60 ppm/°C

Dielectric Withstanding Voltage: 1000 VAC.

Overload: 10X rated wattage for 5 sec. for 5 watt size and larger. 5X rated wattage for 5 sec. for 3 watt size.

Inductance: Typical values, 0.1 μhy for .01 to .09 ohms.

Coating: Molded vitreous enamel.



Watts	Type	Resistance Range	Body Dimensions				Leads 1.5" (38.1 mm)	
			Max. Lgth.—A		Max. Dia.—B			
		Min.-Max.	In.	MM	In.	MM	In.	MM

0 ±50 ppm/°C 1 to 10 ohms.
0 ±90 ppm/°C below 1 ohm.

Dielectric Withstanding Voltage: 500V. (250V for 1 watt size.) 1000V available.

Overload: 10X rated wattage for 5 sec. for 5 watt size and larger. 5X rated wattage for 5 sec. under 5 watt size.

Inductance: Standard units have single layer inductive winding. Non-inductive (Aryton Perry or limited inductance) windings available.

Core: Steatite ceramic.

Coating: Conformal silicone ceramic.

SERIES 99

SPECIFICATIONS

Tolerance: ±5% std. ±.25% to ±10% available. 2 ohm minimum for tolerances closer than ±1%.

Temperature Coefficient:
0 ± 30 ppm/°C 10 ohms and above.
0 ±100 ppm/°C 1 to 10 ohms.
0 ±200 ppm/°C below 1 ohm.

Dielectric Withstanding Voltage: 1000 VAC. 500 VAC for 1 watt size.

Overload: 10X rated wattage for 5 sec. for 5 watt size and larger. 5X rated wattage for 5 sec. under 5 watt size.

Wattage Rating: May be increased by using metal mounting clips as a heat sink.

Inductance: Standard units have single layer inductive winding. Non-inductive (Aryton Perry or limited inductance) windings available.

Core: Steatite ceramic.

Coating: Molded vitreous enamel.

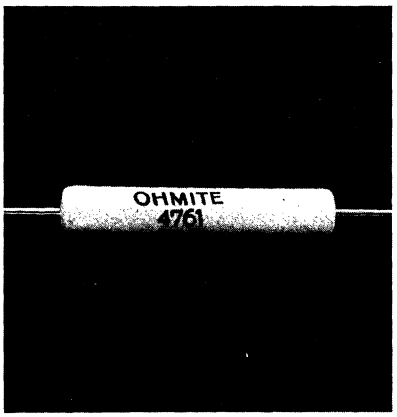
ORDERING DATA

To order any of the above, specify series wanted, wattage, resistance, and tolerance.

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, IL 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® type 995 MOLDED axial lead vitreous enameled resistors



- FIRST MOLDED WIREWOUND,
- VITREOUS ENAMEL RESISTOR
- INSULATED! MEETS 1000 VAC TEST
- WITHSTANDS 1500°F TEMPERATURES WITHOUT DISTORTION
- RESISTS CHIPPING, BREAKING
- UNIFORM SIZE PERMITS CLIP-MOUNTING
- WITH SIGNIFICANT HEAT SINK BENEFITS
- HIGH OVERLOAD CAPABILITY

An exclusive technique (U. S. Patent No.'s 3,229,237 and 3,489,828) permits application of the vitreous enamel coating by **molding** instead of the conventional "dip" process. The dimensionally consistent and thicker coating that results, guarantees a 1000 VAC insulation rating plus unparalleled capability for withstanding very high temperatures, high humidity and immersion in salt solution.

These resistors are normally mounted by their axial leads. However, their consistent form also permits mounting in clips with heat sink benefits up to 100%. Resistance tolerance is ±5%. Series 99 resistors meet the requirements of MIL-R-26 for "insulated" resistors.

OHMITE® Series 22 5% tolerance

conformal vitreous enamel axial lead wirewound resistors

- **Rugged Vitreous Enamel Coating Withstands Severe Humidity and Temperature Cycling**
- **Economical**
- **All Welded Construction**
- **Ideal for Machine Insertion**

Advanced conformal vitreous enamel coating protects resistors, even in environments of high heat.

These rugged, economical wirewound resistors are recommended for industrial applications where quality construction and reliable operation are prime specifying parameters.

5% tolerance is standard for all wattage sizes. Dielectric breakdown is 1KV (500V for 1 Watt size). Typical T.C. of ± 30 ppm/°C. for 10 ohm values and above.

Watts	Body Dimensions Max L (A) ("/mm)	Body Dimensions Max Dia. (B) ("/mm)	Leads 1.5"/38.1 mm GA

MECHANICAL

Terminal Strength: Meets MIL-R-26 requirements.

ELECTRICAL

Tolerance: ±5% std.;

Temperature Coefficient: 0±30 ppm/°C typical for 10Ω and above.

Dielectric Withstanding Voltage: 1 KV (500 V for 1 W types).

Overload, Short Time: 10X rated wattage for 5 sec. (5 W size & larger); 5X rated wattage for 5 sec. (under 5 W).

Inductance: Varies with no. of turns and wire size. Std. units have single layer winding.

MATERIALS

Core: Ceramic, resistant to thermal shock and wide variations in temperature.

Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance element welded to metal end caps.

Coating: High performance conformal vitreous enamel.

Leads: Solder coated.

conformal silicone ceramic axial lead wirewound resistors

Series 44 Ohmicone® conformal silicone ceramic power resistors are designed for a wide range of commercial, industrial and communications equipment and systems. Resistors feature low, stable T.C.; all welded construction; and operation under high temperature conditions.

Tolerance: ±1% and ±5% closer tolerance available.

Temperature Coefficient: <1Ω—0±90 ppm/°C; 1 to 10Ω—0±50 ppm/°C; 10Ω & greater—0±20 ppm/°C.

Dielectric Withstanding Voltage: 500 V (250 V for 1 W size).

Overload, Short Time: 10X rated wattage for 5 seconds (5 W and larger); 5X rated wattage for 5 seconds (3 W and smaller).

Wattage: 1, 2, 3, 5, and 10 Watt Sizes.

Inductance: Varies with no. of turns and wire size. Standard units have single layer winding.

Non-inductive (ARYTON-PERRY) windings available.

MATERIALS

Core: Ceramic, resistant to thermal shock and wide variations in temperature.

Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance element welded to metal end caps.

Coating: High performance conformal silicone ceramic.

Leads: Solder coated.

DERATING

Wattage is based on 25°C **Free Air Rating.** For higher temperature operation, derate linearly from 100% @ +25°C to 0% @ +275°C.

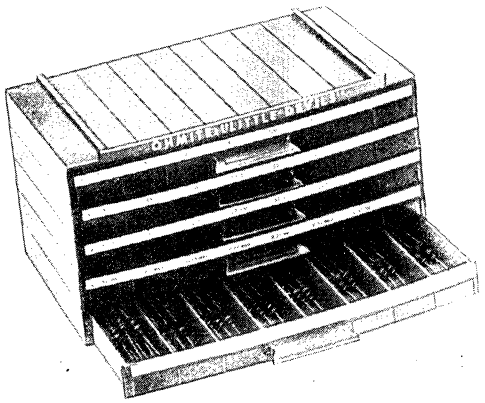
OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St.. Skokie. Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® cabinet resistor assortments



Perfect for R & D and prototype labs.
All popular values included.
8 wattage sizes to choose from.
Contents clearly marked on front of each drawer segment.

Always have the right style, wattage, and resistance value on hand. Thwart Murphey's Law which states; "The resistance value needed will not be available."

Ohmite cabinet assortments come in four different resistor styles and 8 different wattages. The resistors used to make up these assortments are the most popular resistance values as determined by national usage.

The handy compact plastic cabinets are packed in accordance with the tables below, which state the quantities, number of values, and the resistance range of each assortment. Each drawer segment is individually labeled. Dovetail tops and bottoms of each cabinet facilitate stacking. Individual cabinet dimensions are: 9″ long by 4¾″ high by 5¼″ deep.

For specific information regarding any of the cabinet assortments, ask your Ohmite Distributor for the latest cabinet brochure.

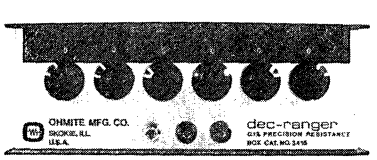
DEC-RANGER™



0.1% ACCURACY PRECISION DECADE RESISTANCE BOX NO. 3416

SPECIFICATIONS:

ACCURACY: ±0.1% (PLUS 0.03Ω MAXIMUM CONTACT AND CIRCUIT RESISTANCE)

NUMBER OF DECADES: 6

SELECTION: ROTARY TAP SWITCHES, CONTINUOUS ROTATION IN EITHER DIRECTION

READ OUT: DIGITAL, IN LINE, THROUGH "WINDOWS" IN PANEL

SWITCH LIFE: IN EXCESS OF 50,000 OPERATIONS

DIMENSIONS: 10½″ LONG x 3¾″ HIGH x 4⅝″ DEEP

CAP-RANGER®

ECONOMICAL, PORTABLE CAPACITANCE SELECTOR

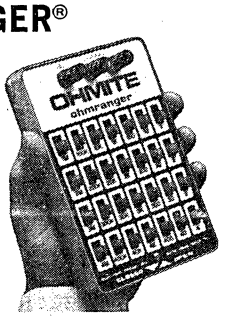
100 picofarads to 11.111 microfarads in 100 picofarad steps with ±2% accuracy. Three binding posts, one to ground the metal case. Compact size. Big performance. Simple operation. Solves your troubleshooting, breadboarding and circuit design problems using simple sliding switches. Dimensions 4″ x 6″ x 1″.

Catalog No. 3430

OHM-RANGER®

ECONOMICAL, PORTABLE RESISTANCE SELECTOR

- **Over 11 million ohms in one-ohm increments**
- **1% accuracy***
- **Easy slide switch operation**
- **Handy slimline size**
- **Rugged metal construction**



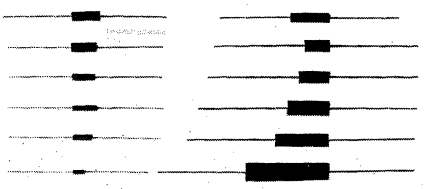
1 to 11,111,110 ohms, in one-ohm steps — with accuracy assured by half-watt 1% tolerance resistors! Has three binding posts, one to ground case. Small enough to take anywhere in your pocket, the handy easy-to-use OHM-RANGER is ideal for lab use, schools and service technicians. Dimensions 4″ x 6″ x 1″.

* 10 ohms and above

Catalog No. 3420

OHMITE MFG. CO., a NORTH AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, IL 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

PRECISION POWER RESISTORS
Sub-Miniature Wire Wound
V-Coated for 350° C

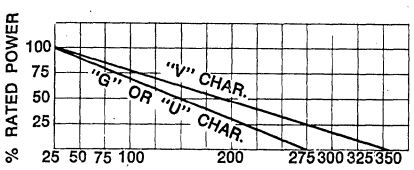


TYPE A MOLDED
.4 to 14 watts

TYPE B MOLDED
1 watt to 10 watts
Beryllium or Alumina Oxide Core

ELECTRICAL SPECIFICATIONS

1. **Tolerances** — 5%, 3%, 1%, .5%, .25%, .1%, .05%, .02%.
2. **Dielectric Strength** — 500 VAC for 04A, 05A, 15A; B1, B3. Bal. 1000 VAC, circular foil wrap method or V-block.
3. Life — Maximum 0.5% resistance change after 1000 hour load life cycling 1½ hours on, ½ hour off, full load at 25°C).
4. Temperature Coefficient — Below 1 ohm = 90 PPM, Below 10 ohms = 50 PPM, Below 50 ohms = 30 PPM, All above = 20 PPM.



AMBIENT TEMP. DEG. CENTIGRADE

GENERAL SPECIFICATIONS

1. **Molded Type A** axial-lead resistors, molded for uniformity and minimum size for today's space age requirements.
2. Completely welded construction.
3. Meet or exceed requirements of Mil-R26, characteristic U.
4. Leads are tinned copperweld. Other materials available on request.
5. High temperature silicone molded coating.
6. **Molded Type B** beryllium oxide or alumina with power ratings 1.4 to 4 times higher than conventional ceramic resistors of the same size.

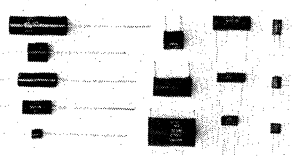
For Non-Inductive Winding add Suffix "N" to Callout.

MOLDED PRECISION WIRE WOUND RESISTORS



TYPE AP: AXIAL PRECISION
TYPE LP: LUG PRECISION
TYPE RP: RADIAL PRECISION
TYPE RPC: RECTANGULAR PRINTED CIRCUIT
TYPE PC: PRINTED CIRCUIT

All are non-inductively, reverse Pi wound at minimum wire tension for maximum long life stability. All production is aged before calibration for insurance of minimum long-term load-life drift. Due to advance winding techniques and design they have extremely low rise time characteristics approaching film type resistors. Through matching of materials, resistance changes from temperature expansion rates is eliminated. Zero voltage coefficient and low noise characteristics. Leads are solderable or weldable. TC of 15 PPM/°C standard. TC of 2 PPM/°C to 6000 PPM/°C available. All bridges and other instrumentation used in calibration are periodically checked against National Bureau Primary Standards. Designs exceed Mil-R-93 and Mil-R-9444. Distinct capabilities for: Special Networks; Matched Sets; Voltage Dividers; Molded and encapsulated Modules.

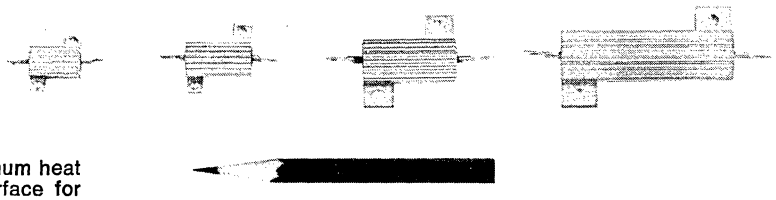
PACIFIC RESISTOR CO.
18300 OXNARD STREET, TARZANA, CA 91356 • (213) 345-7811 - (213) 873-4575 • Inside CA: 800-835-3355 • Outside CA: 800-367-6677

PRECISION POWER RESISTORS
Aluminum-Finned Heat Sink

TYPE CH CHASSIS MOUNT
5 through 250 watts

TYPE BCH CHASSIS MOUNT
15 through 35 watts
Beryllium Oxide or Alumina Core

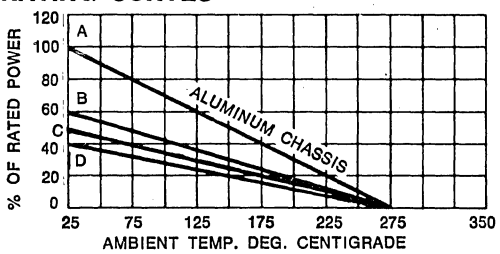


Chassis Mount, Type CH units are designed for maximum heat dissipation by mounting solidly to metal chassis surface for maximum heat transfer. They are outstanding for their high power dissipation with precision tolerances in minimum physical sizes.

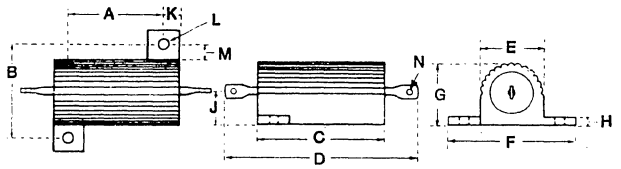
ELECTRICAL SPECIFICATIONS
1. Resistance Range — .05 ohms to 275K ohms.
2. Tolerance — 5%, 3%, 1%, .5%, .25%, .1%, .05%.
3. Temperature Coefficient — ±20 PPM to 90 PPM

GENERAL SPECIFICATIONS
1. Lower hot spot ratings due to exclusive complete encapsulation of element within anodized aluminum body.
2. Welded construction throughout assures long stable load life.
3. Heavy spade lug type leads on 5 through 70 watt sizes, threaded heavy stud terminals on 100 through 250 watts.
4. 1000 VAC minimum dielectric strength on 5CH, 10CH, B5CH and B10CH; 2500 VAC on 25CH, 50CH, 100CH, and B25CH; 5500 VAC on all others.
5. Temperature Range — −55°C to +275°C.
6. Eight standard sizes.

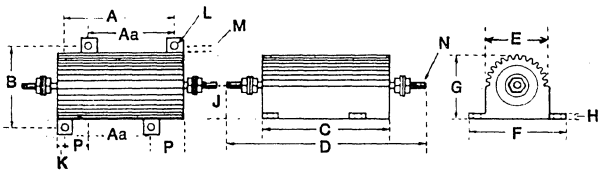
DERATING CURVES



Temp. of −55°C to +275°C. Derating is required for reduced chassis mounting area and high ambient temp.
Curves:
A — When mounted on proper alum.
Chassis:
4x6x2x.040 alum. chassis = 5CH & 10CH.
5x7x2x.040 alum. chassis = 25CH, B25CH, & B50CH.
12x12x.059 alum. panel = 50CH & 100CH.
12x12x.125 alum. panel = 110CH, 180CH, and 250CH.
B — Unmounted 5CH, 10CH, B5CH, B10CH.
C — Unmounted 25CH, 100CH, B25CH, and 110CH.
D — Unmounted 50CH, 180CH, and 250CH.



5CH, 10CH, 25CH, 50CH, 100CH, B5CH, B10CH, B25CH



110CH, 180CH, 250CH

Core Conductivity at 275°C — BTU-Ft / Ft²-Hr-°F

- BERYLLIUM OXIDE (BeO)-64
- ALUMINUM OXIDE — 8
- STEATITE — 1.5

* 0.02 ohm to 0.1 ohm and maximum resistance values available in non-standard physical sizes −0 +.062". All low value 2-terminal designs are calibrated and tested at mid-point on lead unless otherwise specified.

ENGINEERING DATA:

1 RESISTANCE RANGE "widest in the industry"
Any ohmic value or decimal part of an ohm within range listed. Shunt values to 0.005 ohm.

2 RESISTANCE TOLERANCE
Standard: ±1% (other tolerances available: ±½%, ±¼%, ±1/10% & ±1/20%).

3 TEMPERATURE COEFFICIENT OF RESISTANCE (TCR)
Standard: Zero ±5 ppm/°C to Zero ±20 ppm/°C.
Special: To ±2 ppm/°C.

4 INDUCTANCE
The basic TYPE SM resistors are inductively wound. Non-inductive resistors are available—add suffix letter "N" in part number.

5 VOLTAGE RATINGS (D.C. Voltage or Peak Voltage)
To calculate the safe operating voltage for any resistance value below the maximum listed, apply the Formula $E = \sqrt{PR}$. Our unique design allows twice normal operating standards.

6 POWER RATINGS
All standard 1% tolerance TYPE SM resistors are designed for continuous full load operation at 25°C. Derate to zero power at +275°C.

7 PROTECTIVE COATING
All TYPE SM resistors are sealed in a tough solvent resistant — high temperature silicone coating.

8 PRODUCTION CAPACITY
Small quantity lots delivered quickly, as well as competitive high volume general purpose resistor capabilities.

LONG LIFE • SOLVENT RESISTANT • LOWER TCR • HIGH TEMPERATURE • LOW COST

TYPE HR
ULTRA HIGH PRECISION AXIAL LEAD

1 RESISTANCE RANGE AND TOLERANCE "MIL GUIDELINES"

Standard: Any ohmic value or decimal part of an ohm desired from 0.1 ohm to 10 megohms with tolerances to ±0.01%.

2 TEMPERATURE COEFFICIENT OF RESISTANCE "TEMPERATURE STABLE"

Standard: Zero ±5 ppm/°C (100 ohms and above).
Zero ±15 ppm/°C (values below 100 ohms).
Special: To ±1 ppm/°C.

3 STABILITY VS. TIME CHARACTERISTICS "ZERO DRIFT"

To ±0.001%/year at 25°C. of tol.
.01% tol. = .001% stability/yr (no load).

TYPE SX
HIGH PRECISION AXIAL LEAD

1 RESISTANCE RANGE AND TOLERANCE "REPEATABLE (PART TO PART)"

Any ohmic value desired with tolerances of ±1% (standard), ±½%, ±¼%, ±1/10% and ±1/20%.

2 TEMPERATURE COEFFICIENT OF RESISTANCE (TCR)

Zero: ±10 ppm/°C (standard).

3 STABILITY VS. TIME CHARACTERISTICS "LOW ΔR"

To ±0.005%/year at 25°C (no load).

4 POWER RATINGS VS. AMBIENT TEMPERATURE AND RESISTANCE TOLERANCE

(Full power ratings to +125°C, are based upon standard ±1% resistance tolerance. Derating is required for higher temperatures and closer resistance tolerances.)

5 INDUCTANCE

The standard Type SX resistors are inductively wound. Non-inductive resistors are available — add suffix letter "N" in part number.

6 TERMINALS

Solderable hot-tinned (63% Sn — 37% Pb) copper wire leads. Low thermal EMF construction.

7 PROTECTIVE COATINGS

Type SX: New **solvent resistant** silicone-epoxy-seal.

8 PURCHASING INFORMATION

Please specify: Quantity, type, resistance value, resistance tolerance and special features which may apply. All orders are accurately checked 100% and delivered "on time" to meet critical schedules.

TYPE PT
TEMPERATURE-SENSITIVE SPECIFICATIONS

PRECISION'S linear (+) TCR thermal tracking resistors function as **economical temperature sensing** devices or used as **compensators** for voltage stabilization.

Maximum Resistance values based upon .001" wire size.
Hundreds of additional physical sizes and TCR combinations are available.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

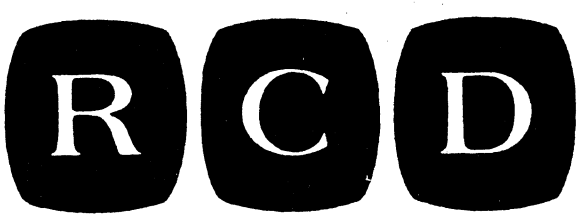
It's simple.

If we can't save you money on resistors, then we don't deserve your business.

RCD Components.

The fastest growing resistor manufacturer in the country.



RCD Components Inc. • 330 Bedford Street, Manchester, NH 03101
(603) 669-0054 Tlx: 943512

RCD Quick Reference Guide

POWER WIREWOUND RESISTORS

STOCK	**100,100X,100R,100B** ¼W-20W	Silicone coated, all-welded, per MIL-R-26(RW), MIL-R-39007 (RWR). .001Ω to 300KΩ, tolerances to ±0.01%, TCR to 5PPM. **100X** — non-inductive **100BEO** — increased power **100R** — radial leads **100F** — flameproof coating
	600,600X,600B  5W-300W	Silicone molded in an aluminum housing. High wattage capability with chassis mounting, per MIL-R-18546(RE), MIL-R-39009(RER). .005Ω to 200KΩ, tolerances to ±0.01%, TCR to 5PPM. **600X** — non-inductive **600BEO** — increased power
STOCK	**PW,PWA,PWR,PWF**  2W-50W	Low cost general purpose wirewounds. Ceramic encased, completely flameproof. **PWX** — non-inductive **PWA** — standoffs **PWR** — radial leads **PWF** — failsafe fusible **PWS** — miniature sizes
	RW,RWF 	Low cost epoxy molded or conformal coated wirewounds offer savings over carbon comps. RW-1 (1-watt) is the size of a ½-W carbon comp. RW-2(2W) and RW-3(3W) are both the size of a 1W comp. **RWF** — Flameproof fusible
	ULV,LVF 	Series ULV utilizes a newly-developed manufacturing technique to obtain very low values (to 0.002Ω), with precision accuracy at lowest cost. **LVF** — four terminal construct.

THICK FILM RESISTORS

STOCK	**RSF,BW**  ¼W-9W	New development! Flameproof, thick complex-oxide construction results in performance and size of wirewounds, at significant price reductions. Non-inductive, high-surge capability. 0.1Ω to 240K stocked. BW Series is fusible.
	RG, UHV  ¼W-4W	Cermet glaze for high voltage and/or high resistance applications. Voltage capability to 50KV. Resistance to 10,000 Gig. Tolerances to 0.5%, TCR to 50PPM.
	MG ¼W-1W	Miniature resistors! ½-watt is ⅛W size, 1-watt is ¼-watt size. Improved dissipation due to thick cermet glaze. 6.2 ohm to 1 Meg, TCR to 50 PPM, tolerances to 1.0%.
	MC, MCR 1/16-1.0W	High-stability thick film chip resistors. 4.7Ω to 2000 Meg. Wrap-around termination available. Tolerances to 0.25%, TCR to 50PPM.
	MR  1/4W	Cermet micro-resistors offer highest performance in smallest possible size. Only 0.1" long! 4.7Ω to 8.2 Meg. ±5%, ±10%.
STOCK	**DIP,SIP** 	Thick film resistor networks offer premium performance per MIL-R-83401. SIP packages are 4 to 12 pin. DIP's are 14 or 16 pin. Variety of standard and custom configurations, hybrids available.

PRECISION WIREWOUND RESISTORS

	SA,MA .1W-2W	Epoxy encapsulated, non-inductive precision bobbin wirewounds per MIL-R-93(RB), MIL-R-39005 (RBR). 0.1Ω to 25 Meg, tolerances to ±0.005%, TCR from ±1PPM to +6700PPM
	PC,PC451  .1W-1W	Same as Series SA, MA but feature radial leads for easy PCB insertion and space savings per MIL-R-93, MIL-R-39005. PC451 (rectangular) is direct low-cost replacement for ultra-precision films.
	Q 	Wirewound substitutes for precision metal film's RN55, RN60, RN65, RN70, RN75. Better stability, lower price. TCR as low as ±2PPM. Tolerances to ±0.01%.

THIN FILM RESISTORS

	MF .1W-1W	Precision metal film per MIL-R-10509, RN55,60,65,70,75 and MIL-R-55182(RNR,RNC). 10Ω to 5.1 Meg, tolerances to ±0.05%. Outstanding TC's to 5PPM.
STOCK	**GP** .1W-1W	Commercial metal film with MIL-spec performance at half the price! Exceeds MIL-R-10509(RN),-22684 (RL),-39017(RLR). Values to 22.1 Meg, TC's to 25PPM, tolerances to ±0.5%.
STOCK	**CF,CFF** 1/8W-2W	General purpose carbon fim feature highest grade core for extended life stability and overload dissipation. 1ohm to 22 Meg, 7 standard sizes. Series CFF is flameproof.

TEMPERATURE SENSORS

	LP 1/4 +150°C	Low cost metal film with linear positive TCR. 33Ω to 30K, tolerances to ±1.0%. Available in any T.C. up to +5000PPM (.5%/°C). Only ¼" long.
	ATB,PTB,ATS,ATC +375°C	Precision wirewound, axial or radial. Interchangeable TCR, 1Ω to 1 Meg, tolerances to ±0.05%. Available in any T.C. up to +6720 PPM.
	PTC,PTS +600°C	Ceramic encased RTD elements or stainless steel RTD probles. Platinum, Nickel, Nife elements stocked. Tolerances to +0.1%.

SPECIALTY PRODUCTS

	FUSE RESIRTORS 1/8W-10W	Standard and Custom fusing curves to provide precisely controlled circuit protection. Fusing time to 5μS at 0.1A and up.
	SURGE RESISTORS 1W-50W	Withstand high energy dissipation and absorb surges up to 75 joules with minor resistance shift Standard and Custom designs.
STOCK	**ZERO OHM** ¼W	Insulated jumpers come in 1/4 W size and are suited for automatic insertion. Resistance is .02 ohm or less.

INDUCTORS

STOCK	**AL** 	Low cost color banded inductors per MIL-C-15305. Special core results in high Q and SRF, low DCR. .22μH to 56000μH. Axial or radial leads.

CUSTOM

RCD manufactures a series of custom coil products including toroids, transformers, and shielded chokes. RCD also offers custom Res/cap, Res/Diode hybrid networks and voltage dividers.

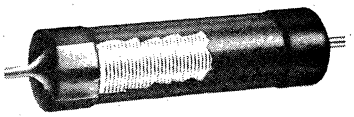
Don't forget our **'SWIFT'** service (**S**hip **W**ith **I**n **F**ifty **T**wo hours) when you require fast delivery of a non-stock item!

RCD Components Inc. • 330 Bedford Street, Manchester, NH 03101 • (603) 669-0054 Tlx: 943512

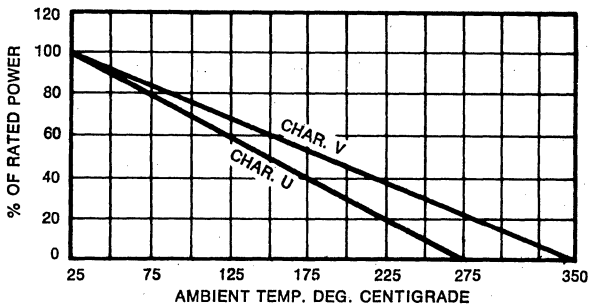
RCL·Shallcross POWER WIREWOUND RESISTORS

MIL-R-26, TYPE RW

T Series, Silicone Coated



DERATING CURVE



GENERAL SPECIFICATIONS

Wattage Range: 25 styles to choose from ranging from .4 to 14 watts.

Resistance Values: From 0.1 ohm to maximum values as stated in table. For values below 0.1 ohm, use RCL-Shallcross Low Ω Metal Element Resistors.

Power Rating: Two power ratings, depending on operating temperature and stability requirements:

- Characteristic U: 275°C maximum hotspot temperature.
- Characteristic V: 350°C maximum hotspot temperature.

Derating: Wattage Ratings based on operation at 25°C. For higher ambient temperatures, derate per derating curve.

Tolerance: ±1.0% is standard. Closer tolerances are available.

Temperature Range: From −65°C to +275°C (Characteristic U) or +350°C (Characteristic V).

Temperature Coefficient of Resistance: Standard T.C.: ±20 PPM/°C = 500Ω and up, ±30 PPM/°C = 10Ω to 499Ω, ±50 PPM/°C = 1Ω to 9.99Ω, ±90 PPM/°C = 0.1Ω to 0.99Ω, ±400 PPM/°C = 0.025Ω to 0.099Ω, ±650 PPM/°C = 0.01Ω to 0.024Ω.

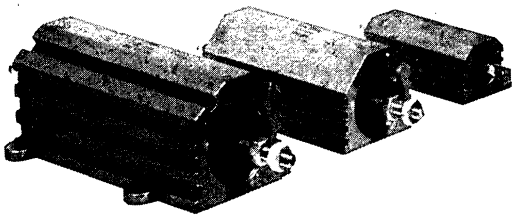
RCL·Shallcross POWER WIREWOUND RESISTORS

MIL-R-18546, TYPE RE

AL Series, Aluminum Housed Chassis Mount



GENERAL SPECIFICATIONS

Wattage Range: 7 styles to choose from ranging from 5 to 250 watts.

Resistance Values: From 0.1 ohm to maximum values as stated in table.

Power Rating: 275°C maximum hotspot at 25°C ambient. 1% maximum ΔR in 1000 hour load life.

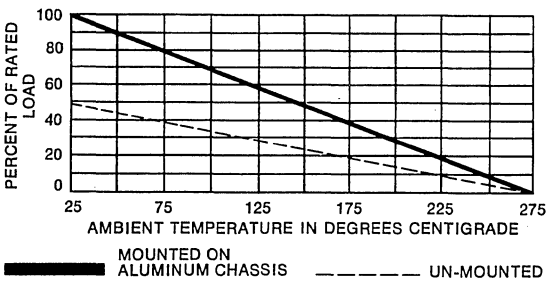
Derating: Wattage ratings based on operation at 25°C. For higher ambient temperatures, derate per derating curve.

Tolerance: ±1.0% is standard.

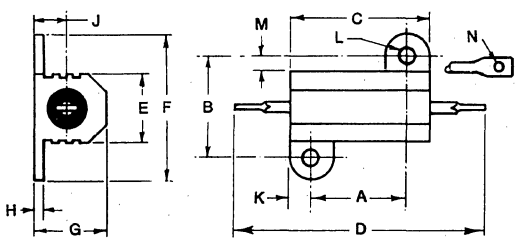
Temperature Range: From −55°C to +275°C.

Temperature Coefficient of Resistance: Standard T.C.: ±20 PPM/°C = 10Ω and up, ±50 PPM/°C = 1Ω to 9.99Ω, ±90 PPM/°C = below 1Ω.

WATTAGE VS. AMBIENT TEMP. DERATING

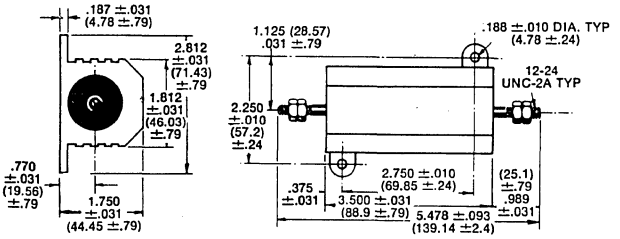


DIMENSIONS — 5 THRU 75 WATTS



(METRIC DIMENSIONS ARE IN PARENTHESIS)

DIMENSIONS — 100 WATT



DIMENSIONS — 250 WATT

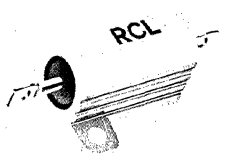
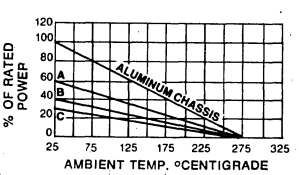
[3] Ayrton Perry Winding available for Non-Inductive requirements.

MIL-R-39009, TYPE RER, R LEVEL

AL-ER Series, Aluminum Housed Chassis Mount





GENERAL SPECIFICATIONS

Wattage Range: 4 styles to choose from ranging from 5 to 50 watts.

Power Rating: 275°C maximum hotspot at 25°C ambient. 1% maximum ΔR in 2000 hour load life.

Derating: AL-ER chassis mount resistors have an operating temperature range of −55°C to +275°C. For higher ambient temperatures, use derating curve which applies to operation of unmounted resistors (A = AL5ER and AL10ER, B = AL25ER and C = AL50ER).

Tolerance: ±1% is standard.

Temperature Coefficient of Resistance: Standard T.C.: ±20 PPM/°C = 20Ω and up, ±50 PPM/°C = 1Ω to 19.6Ω, ±100 PPM/°C = below 1Ω.

Dimensional Specifications: Identical to AL Series on previous page.

RCL·Shallcross LO-M® METAL ELEMENT RESISTORS

Low Ohmic Value At An Affordable Price

GENERAL SPECIFICATIONS

Wattage Range: 3 and 5 watts.

Resistance Values: 0.005, 0.01, 0.015, 0.02, 0.025, 0.03, 0.04, 0.05, 0.07, 0.08, 0.1, 0.2 ohms.

Derating: Lo Ω Metal Element Resistors are derated linearly from room temperature at full power to 0 power at 275°C.

Tolerance: 5% — All styles and values, 3% — All styles and values, 0.5% available above 0.005 ohms.

Construction: Tinned copper leads are welded directly to a low temperature coefficient of resistance element by a highly mechanized proprietary process. Resistors are encapsulated in a special formulated compound.

FEATURES

- Ultra Low Resistance Valves
- High Stability Over Life
- Low Temperature Coefficient of Resistance
- Inherently Non-Inductive

DUAL FUNCTION FUSE RESISTORS

A Dual Purpose Device That Acts As Both A Wirewound Resistor and Fuse

GENERAL SPECIFICATIONS

Resistance Range: 0.2Ω to 200Ω.
Resistance Tolerance: 10% is standard, 5% and 2% definition.
Blow Characteristics: Per table — 2 pt. definition.
Operating Temperature: −55°C to +150°C
Temperature Coefficient: ±50 PPM/°C Max.

FEATURES

- Affords protection for semiconductor devices
- Eliminates fire hazard and circuit board damage to overheated components
- Eliminates unnecessary blowing due to transient conditions
- Reduces the number of discrete components required.

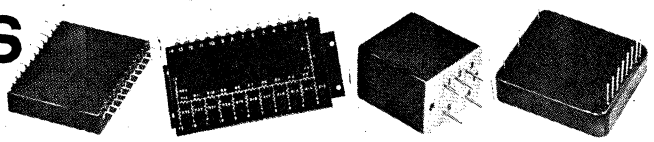
RCL/Shallcross DISCRETE RESISTOR NETWORKS & MATCHED SETS



NETWORKS

Network quality is determined by the qualities of its individual resistors and the packaging and mounting expertise of its assembler. RCL/Shallcross offers a unique background of experience, data, manufacturing and testing skills for its wirewound resistor networks. PARAMETERS: (1) Resistance ratios to .001%, (2) Resistor tolerances to ±.005% (at ambient), (3) Ratio tolerances as close as .01% (over a range of temperatures), (4) Stability to ±.001% per year.

MATCHED SETS

Two or more resistors can be matched with relative tolerance much higher than each one's individual tolerance. Characteristics most often matched are: (1) DC Resistance at one or more temperatures, (2) AC and DC Voltage ratios, (3) Temperate Coefficients and (4) Phase Shifts. Principle advantages of matched sets are: (a) Very tight relative tolerances, (b) Lower cost than networks of comparable accuracy and (c) Flexibility in locating components during design and packaging. An engineering staff at RCL/Shallcross is ready to assist you in specifying your matched set requirements.

Consideration of the following requirements will provide our engineering staff with adequate information to complete your specification and quotation:

A. CIRCUIT

Resistance values .....
Resistance tolerances .....
Ratio/Ratios .....
Ratio tolerance (Ambient) .....
(over operating temperature range) .....
Wattage dissipation ..... per resistor ..... total
Frequency in Hz if AC .....
Ambient Temperature ..... °C
Operating temperature range − ..... °C to + ... °C
Maximum applied voltage .....

Size (Maximum) Win I	H ± 0.320 (8.12) L = 0.305 (7.74) W = 0.110 (2.79)
Size (Maximum) Win II	H ± 0.365 (9.27) L = 0.365 (9.27) W = 0.160 (4.06)

RCL/Shallcross MOLDED TEMPERATURE SENSORS

RCL offers a standard line of epoxy encapsulated sensing resistors for temperature compensating applications. The standard resistance tolerance ±5% with tighter tolerances available on special order. Cable lengths from 2.0″ to 48.0″ (50.80 to 1219.2 mm) are available with 6.0″ (152.40 mm) standard. Operating temperature range is −55°C to +105°C. Repeatability of tempco within a given lot is ±100 PPM.

RCL Style	Resistance Range	PPM/°C Average Tempco 0°C — 100°C
TC35	10Ω — 50KΩ	3500 ±350
TC45	10Ω — 10KΩ	4500 ±450
TC55	10Ω — 5KΩ	5500 ±550

RES NET® ULTRA PRECISION METAL FILM RESISTORS & NETWORKS

RESISTANCE TOLERANCES — 0.005% to 1%

TEMPERATURE COEFFICIENT — 1, 2, 5, or 10ppm/°C

FEATURES

- Long Term Stability: 25ppm/year
- Noise Factor: Below 30db
- Inductance: Approx. .05 microhenry
- Capacitance: Below 0.5 picofarad
- Voltage Coefficient: < 2ppm/volt
- Rise Time: Less than 1ns without ringing

We've Put up a LOT of Resistance...

Reliable Performance *Wherever* Needed!

For More Than 30 Years Our Famous, *Versatile* Ohmic Capabilities have met the rigid demands of smart buyers with unerring consistency — saving time, tempers and money.

Against this enviable background our engineers envision even greater challenges in solving future OEM and industrial resistor application problems. For prompt, practical answers to your requirements, send us your prints or specs.

AXIAL LEAD

No.	Watts	Resistance Min. Max.	Dimensions O.D. x Lgth.
3 AX	3	0.1- 10,000	¼ max. x 5/16
5 AX	5	0.1- 30,000	11/32 max. x 1 1/16
10 AX	10	0.1- 50,000	13/32 max. x 1 5/16

FIXED LUG

No.	Wattage	Resistance Min.-Max.	Max. Dimensions O.D. x Lgth.
1 M	5	0.1- 11,000	5/16 x 1
1¾ M	10	0.1- 50,000	5/16 x 1¾

TRW

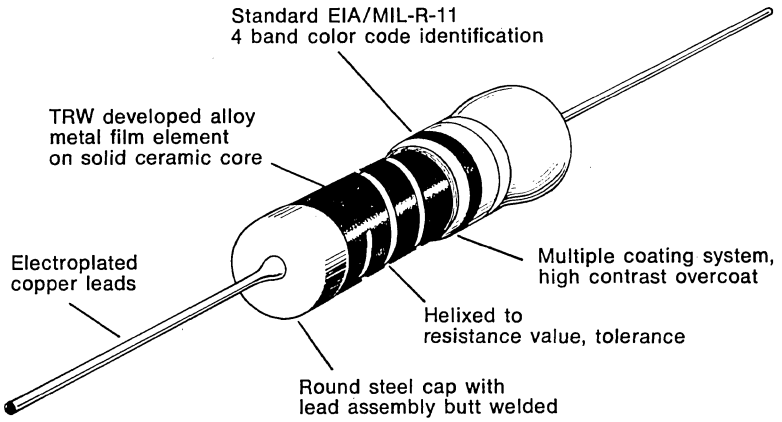
GENERAL-PURPOSE METAL FILM RESISTORS

GP¼ SERIES

- ☐ Dual rating for ¼ watt and ½ watt applications
- ☐ Metal film environmental performance
- ☐ 10 ohms to 1 megohm
- ☐ ±2% or ±5% tolerance
- ☐ ±200 ppm/°C temperature coefficient
- ☐ Low noise



SPECIFICATIONS

Resistance Values: 10Ω through 1.0 Meg

Resistance Tolerance: ¼W application ±2%, ±5% — ½W application ±5%

Power Rating @ 70°C: ¼W, ½W

Temperature Coefficient of Resistance: ±200 ppm

Temperature Range: −55°C to +155°C

Continuous Working Voltage: 250V

Insulation Resistance: 1000 Megohms

Noise: −5 dB to −30 dB

Lead Material: Electroplated Copper

Construction: TRW developed alloy metal film on solid ceramic core

PERFORMANCE DATA (MAX ΔR)

Shock, Medium Impact & Vibration High Frequency: .5% +.05Ω

Load Life 100% Power @ 70% 2% +.5Ω

Short Time Overload: .5% +.05Ω @ 2.5 x Rated Voltage for 5 sec.

High Temperature Exposure: 2% +.5Ω @ 155°C

Low Temperature Operation: .5% +.05Ω

Hot Spot Surface Temperature Rise: ¼W 20°C, ½W 40°C

Temperature Cycling: .5% +.05Ω

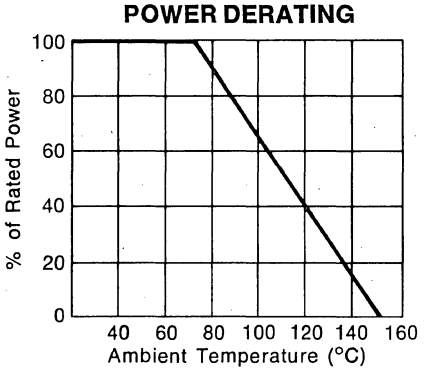
½W 5% - 3% +.05Ω

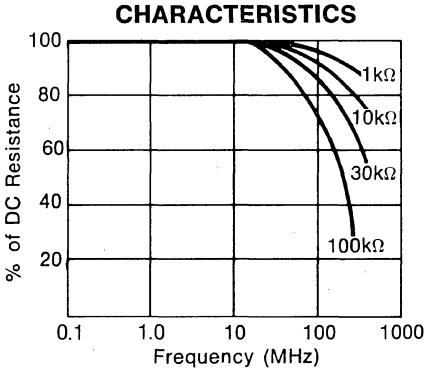
Solder Heat: .5% +.05Ω

Terminal Strength: .5% +.05Ω

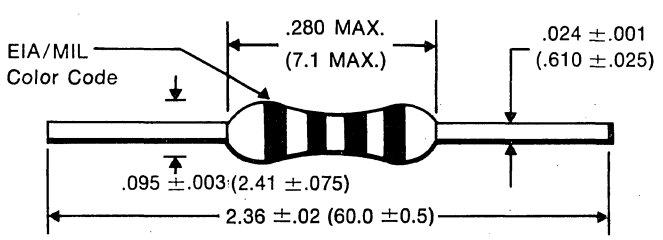
POWER DERATING



HIGH FREQUENCY CHARACTERISTICS



DIMENSIONS — IN. AND (mm)



The GP¼ is a superior dual rated, general purpose metal film resistor. Available as either a 5% general purpose or a 2% semi precision resistor, this conformally coated device exhibits a temperature coefficient of ±200 ppm/°C — far superior to the industry average.

Since it can perform in ¼W and ½W applications, the compact GP¼ saves valuable "real estate" in circuit boards while offering versatility for inventory purposes. This space saving capability coupled with the GP¼'s compatibility with automatic insertion equipment makes it the ideal alternative to carbon composition and carbon film resistors for computer, telecommunications, instrumentation, and many automotive applications.

All the quality and reliability exhibited by TRW Resistive Products for several decades are manufactured into the GP¼. The well established, time tested evaporated metal film process that has been utilized so successfully by our Burlington, Iowa plant is used to manufacture the GP¼. The same sturdy ceramic end cap construction and quality materials have been combined with an automated assembly technique that results in TRW quality at a lower price.

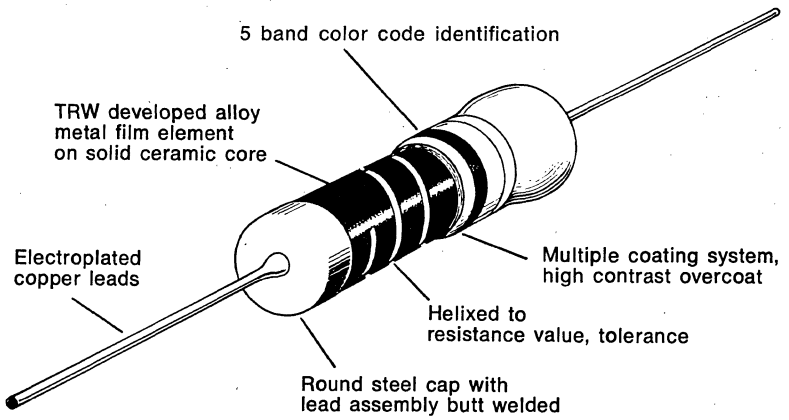
RN55DXXXF EQUIVALENT METAL FILM

GP55 SERIES

- ☐ Metal film stability
- ☐ ±1% tolerance
- ☐ ±100 ppm/°C temperature coefficient
- ☐ 10 ohm to 1 megohm
- ☐ Dual ¼ and ½ watt rated
- ☐ Meets or exceeds MIL-R-10509 and R-22684
- ☐ E.I.A. (5 color band) standard



SPECIFICATIONS

Resistance Values: 10Ω through 1.0 Meg; higher values available; consult factory.

Resistance Tolerance: ¼W application ±1% ½W application ±1%

Power Rating @ 70°C: ¼W, ½W

Temperature Coefficient of Resistance: ±100 ppm

Temperature Range: −55°C to 155°C

Continuous Working Voltage: 250 V

Insulation Resistance: 1000 Megohms

Noise: −5 dB to −30 dB

Lead Material: Electroplated Copper

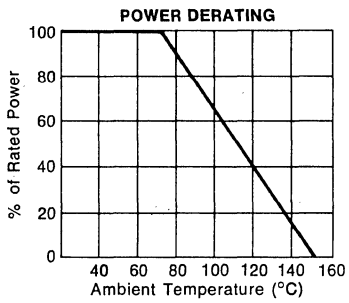
Construction: TRW developed alloy metal film on solid ceramic core

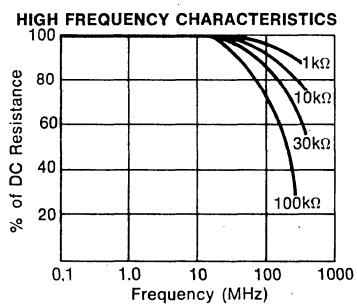
The GP55 is a quality, metal film resistor which is intended to help component engineers and circuit designers upgrade or replace carbon composition and carbon film resistors in most circuit applications. The standard unit comes in a 1% absolute tolerance and a temperature coefficient of ±100 ppm.

GP55 meets or exceeds all parameters of MIL-R-10509 (RN55) and MIL-R-22684 (RL07) and has been lab and field tested with many hours of proven reliability. RS-296D, Class I tape and reel is standard, making the GP55 ideal for high volume, automatic insertion applications.

This precision 1% unit has been designed to be dual-rated (¼ watt and ½ watt), thereby saving printed circuit space while being more cost effective. E.I.A. color banding (5 band) is also standard facilitating identification on printed circuit boards.

GP55 is approved and in use by many leading companies in the telecommunications, computer, automotive and instrumentation industries. Improve your cost effectiveness by converting to GP55.





PERFORMANCE DATA*

Test	Typical ΔR GP55 (1%)	MIL-R-10509	MIL-R-22684	MIL-R-39017

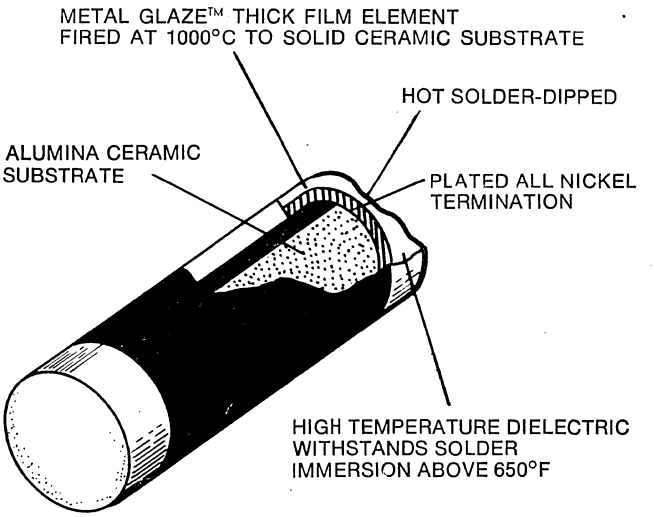
RG CHIP RESISTORS

- ☐ Metal Glaze™ Technology from TRW's RG resistor line. Proven reliability for over 15 years
- ☐ Low TCR — All < 100 ppm/°C
- ☐ Standard size 3.2 x 1.5mm (0.126″ x 0.057″). Compatible with chip placement equipment from Panasonic, Universal, and others
- ☐ Hot solder-dipped nickel contacts withstand prolonged (>60 sec.) immersion in solder with no de-wetting of contacts
- ☐ Bonds to circuit boards with standard techniques using adhesives or solder paste
- ☐ Completely interchangeable with rectangular chips
- ☐ Packaging in bulk or 8 mm tape reels, taping per EIA —RS481



SPECIFICATIONS

Resistance Range: 3Ω to 1 meg*, plus zero-ohm jumpers
Tolerances: 1%, 2% & 5%
Temperature Coefficient: <100 ppm/°C for all tolerances*
Rated Wattage: ⅛ W @ 70°C†
Rated Continuous Working Voltage: √.125 x R or 200V, whichever is less
Commercial RCWV: √.25 x R or 200V, whichever is less
Maximum Overload Voltage: 400V
Temperature Range: −55°C to +150°C
Insulation Resistance: 10,000 Meg min.

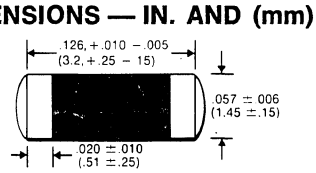
* Contact factory for other resistance values and other temperature coefficients, or for color banding.

† CHP⅛ may safely be double-rated to ¼W operation @ 70°C under normal conditions. Derate to zero at 150°C.

COMPARISON WITH MELF CHIP RESISTORS

RG chips are smaller in size than MELF chips, use thick-film technology rather than carbon films, and have plated nickel terminations, not pressed-on end caps. This also eliminates the typical "dog-bone" outline seen on MELF's. Unlike MELF's, RG chips are available in standard 8mm tape.

DIMENSIONS — IN. AND (mm)



ACTUAL SIZE

8 mm Tape Packaging

COMPARISON WITH CURRENT RECTANGULAR CHIPS

Thick film technology is used in manufacturing of RG chips and rectangular chips. Both have the same standard outline of 3.2 x 1.6mm. Both are available in standard 8mm tape which current chip placement equipment uses.

The RG chip's visible difference is its miniaturized cylindrical shape which makes it somewhat thicker than many resistor chips. This difference poses no problem however in packaging, or in handling, or in placement of the chips onto glue-dotted PCB's by current available chip inserters since they handle both types completely interchangeably.

A major advantage of the RG chip design is its unsurpassed solderability. It is the only resistor chip to offer all nickel contacts. They are completely silver-free . . . are hot soldered dipped, and provide maximum assurance of reliable solder connections without problems of leaching or de-wetting.

Some other advantages include low TCR, ¼ W rating capability, and availability of 1% chips at 5%-type prices. Color band marking is coming soon. All of these technological features are part of the RG family of precision resistors, which has had a proven record of performance for over 15 years.

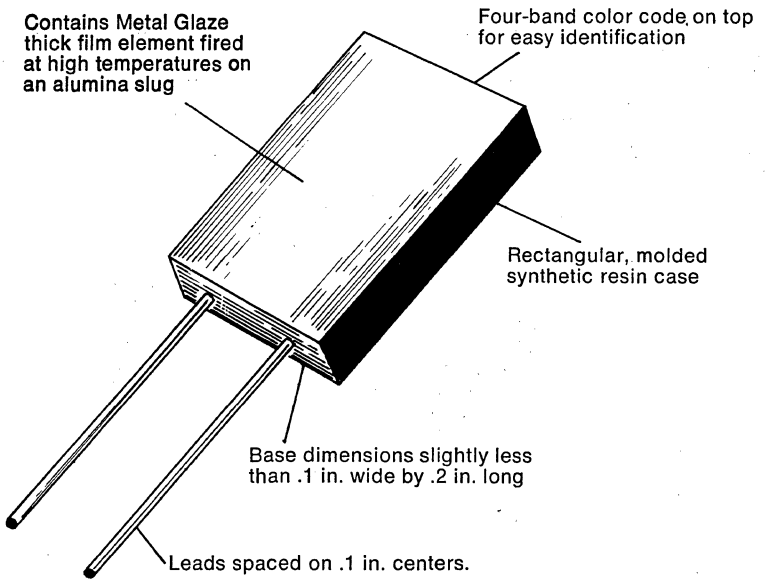
RADIAL LEAD MOLDED METAL GLAZE RESISTORS

RGU SERIES*

- ☐ Take up half the PC board area of comparably rated axial-lead resistors
- ☐ Project 0.39 in. from the board surface when installed
- ☐ Can be placed individually, or grouped in rows, in any direction on standard predrilled PC boards
- ☐ Available on carrier tape and are auto-insertable with existing equipment



SPECIFICATIONS

Resistance Range: 10 ohms to 1 megohm

Tolerance (E96, E24): ±1%, ±2%, ±5%

Temperature Coefficient: ±50, ±100 ppm/°C

Voltage Coefficient: Less than 30 ppm/V

Maximum Continuous Working Voltage: 350V RMS

Dielectric Withstanding Voltage: 1000V RMS min.

Insulation Resistance: Greater than 10^4 Megohms, except top surface

Power Rating: ½ watt at 70°C

Temperature Range: −55°C to +155°C for 56 days, −65°C to +175°C

Stability 70°C, 5000 h: ±0.5%

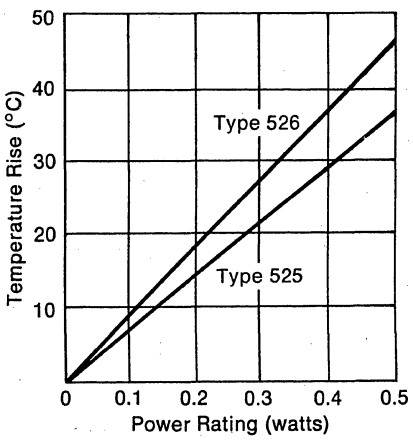
Damp Heat Steady State (40°C, 90 to 95% R.H., 56 days, 5 VDC): 1.0%

Failure Rate (V_O=155°C): <5 x 10^{-9}/h

STANDARDS

Electrical properties according to MIL-R 22684

TEMPERATURE RISE



DIMENSIONS — IN. AND (mm)

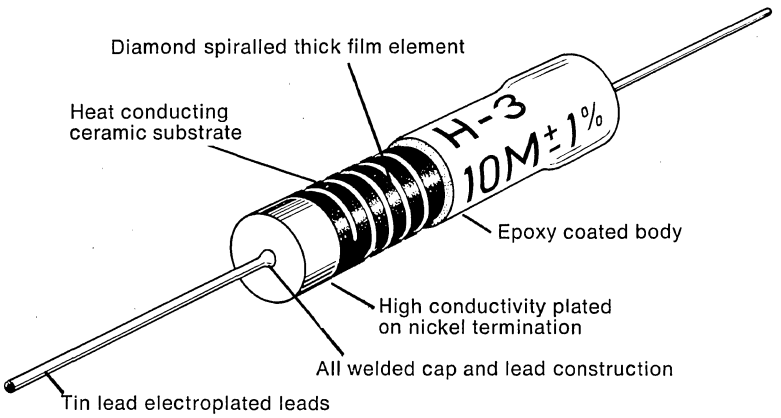
PRECISION, HIGH-VOLTAGE THICK FILM RESISTORS

CGH SERIES

- ¼ watt to 15 watts
- 100K to 500 megohm range
- ±0.5%, ±1%, ±2% or ±5% tolerance
- TC or ±50 ppm/°C or ±100 ppm/°C



SPECIFICATIONS

TRW Type	Power Rating at 70°C (watts)[1]	Voltage Rating (volts)[2]	Resistance Range (ohms)	Tolerance (±%)	Maximum TCR (±ppm/°C)	VCR (ppm/V)
CGH-¼	¼	750	100KΩ to 50MΩ	.5, 1, 2, 5	50, 100	0 to −5
CGH-½	½	1,500	100KΩ to 100MΩ	.5, 1, 2, 5	50, 100	0 to −5
CGH-1	1	3,000	500KΩ to 100MΩ	.5, 1, 2, 5	50, 100	0 to −5
CGH-2	2	5,000	1MΩ to 200MΩ	.5, 1, 2, 5	50, 100	0 to −5
CGH-3	3	10,000	1MΩ to 300MΩ	.5, 1, 2, 5	50, 100	0 to −5
CGH-5	5	20,000	1MΩ to 500MΩ	.5, 1, 2, 5	50, 100	0 to −5

NOTES:
(1) Other wattage ratings available on request. Consult factory. For power rating above 70°C, see derating curve.
(2) Voltage rating shown is the rated DC continuous working voltage or the sine-wave RMS absolute maximum voltage at commercial line frequency. For DC applications the absolute maximum permissible voltage is 1.5 times the value shown for low repetition short-time-overload or pulse conditions of 10 seconds or less duration.
(3) Typical voltage coefficient of resistance is -1 to -2 ppm/V measured at full rated voltage and 10% rated voltage.

CGH-7.5 thru -15 contact factory for specifications and higher or lower resistance values.

ENVIRONMENTAL PERFORMANCE

Test Condition[1]	Maximum ΔR (±3σ)	Typical[2] ΔR
Temperature Shock	±0.25%	±0.10%

The new cost-effective CM55 resistor is the offspring of a marriage of proven TRW technologies and state-of-the-art high speed production equipment. The new conformal outer coating has proven its reliability under extensive performance testing. Many of those tests were performed to military specifications.

The CM55 utilizes the same film system and cap/lead attachment which has proven its reliability over the years in TRW's ultra precision MAR product. Other characteristics exhibited by the CM55 are low inductance, smaller size for a given power rating, and much improved cost effectiveness.

Matched sets of CM55 resistors are available, which provide the ultimate in resistor matching and temperature coefficient tracking. Resistor matching to ±.005% and temperature coefficient tracking as low as ±2 ppm/°C is available in matched sets. Consult the factory for details.

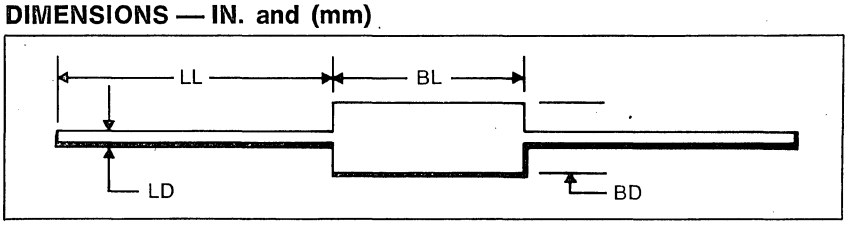
* Wider ranges are available. Consult the TRW plant in Corpus Christi or your nearest TRW sales office.
† T.C. tolerances available to ±5 ppm/°C.

DIMENSIONS — IN. and (mm)



TRW/IRC Type	Body Length BL	Body Diameter BD	Lead Length LL	Lead Diameter LD
MTR3	.191 (4.85)	.082 (2.08)	1.00 ±.062 (25.4 ±1.57)	.016 (.406)
MTR5	.281 (7.14)	.102 (2.59)	1.50 ±.125 (38.1 ±3.18)	.025 (.635)
MTR6	.425 (10.8)	.155 (3.94)	1.50 ±.125 (38.1 ±3.18)	.025 (.635)
MTR7	.650 (16.5)	.195 (4.95)	1.50 ±.125 (38.1 ±3.18)	.025 (.635)

For precision circuits where a high degree of temperature stability is required, MTR Series metal film resistors can be used to reduce the temperature effects of other components.

One common application is compensating for capacitors in RC filters and other RC circuits. By using an MTR resistor with a T.C. of the same magnitude but opposite slope, capacitor temperature coefficients from −100 to +150 ppm/°C can be effectively compensated to zero.

These resistors are also effective for improving the characteristics of amplifiers.

* The MAR5 resistor is qualified to Characteristics H, J and K and to Tolerances B, O and F of MIL-R-55182(E). Approved resistance range is 49.9Ω to 150KΩ.

The MAR resistors meet the need for an ultra precision metal film resistor with characteristics that are superior to other precision resistor techniques. Among these are higher reliability, lower inductance, smaller size for a given power rating, and cost effectiveness.
The proprietary coatings and epoxy mold jacket provides a virtual hermetic seal.

Matched sets of MAR resistors are available, which provides the ultimate in resistor tolerance matching and temperature tracking. Resistance matching to ±.005% and temperature coefficient tracking as low as ±1 ppm/°C are available in matched sets and to ±.01% and ±2 ppm/°C in modular assemblies of resistors.

MAR40	T16	0 ±5 ppm/°C 0 ±10 ppm/°C	0 to 60°C −55° to 125°C	20-250K (Below 50Ω not available in 0.01% Tol.)	0.005, 0.01, 0.02, 0.05, 0.1, 0.25, 0.5, 1.0	0.3	250
MAR40	T18	0 ±2 ppm/°C 0 ±5 ppm/°C	0 to 60°C −55° to 125°C	50-250K		0.3	250

The MAR40 Series of ultra-precision resistors combines the benefits of proven TRW metal film reliability, non-measurable noise, and superior frequency response with very low temperature characteristics, convenient radial lead design, and efficient use of printed circuit board "real estate".

The shelf life and load life stability characteristics are derived from our expertise with the MAR Series of axial leaded resistors. The physical size coincides nicely with the military standard RNC90. The internal construction utilizes the high reliability, noble metal, "end cap" technology of the MAR. In short, the design engineers can take an effective step towards product reliability and long, service-free life, by specifying the MAR40. The MAR40 may be specified to any custom value needed and/or purchased in matched sets with tolerances placed on the nominal ratios and close tracking of temperature coefficients.

The MAR40 ultra-precision resistor can be made to exact specifications without the usual delays in delivery of prototypes. The flexibility of the MAR40 manufacturing process allows quick response to customer delivery.

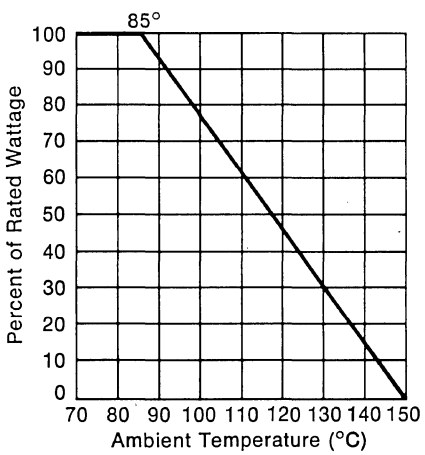
Shock and Vibration	+0.01
Short-Time Overload	+0.01
Insulation Resistance	>10000 MegΩ
Noise Index	<−30 dB
Voltage Coefficient	<0.05 ppm/volt
1-Year Shelf Life	±30 ppm

DERATING CURVE



RATIO ACCURACY AND TC TRACKING SPECIFIATIONS

Ratio to Master	TC Track 0° to 70°C	Resistance Ratio Accuracy
1:1	1 ppm	.005%
10:1	1 ppm	.01%
100:1	2 ppm	.01%
1000:1	3 ppm	.02%

The performance of most precision resistor circuits requires that the relationship of all the resistors used be held to exacting tolerances in relation to each other. This tight tolerance relationship can be accomplished in two ways. One is to specify absolute tolerances so that no resistor can deviate from any other resistor by more than twice this tolerance. The other is to specify matched sets of resistors where the relationship between resistors, rather than absolute tolerances, is tightly controlled in many designs, the absolute values are not so critical as the maintenance of a precise relationship among the set during changing ambients.

Matched resistor sets using the MAR series of resistors provide a decade or greater improvement in performance at significantly less cost than individually specified resistors. While others of our resistor products can be specified as matched sets, the MAR Series is recommended for most critical applications.

Specifying matched resistor sets requires that the resistance ratio tolerance be specified along with allowable absolute tolerance; and the temperature coefficient tracking tolerance be specified with the basic TC.

Two examples of specifying matched sets are shown below. Other design considerations permitting, it is more economical to specify ratios to a reference resistor than to each other. However, if required, the MAR series offers the inherent precision and stability for either method.

A knowledge of the availability of these two ways to achieve extreme stability offers options to the designer which may prevent overspecifying, with attendant economic considerations.

SPECIFICATION EXAMPLES

Example No. 1

Resistor	Ohms	Watts	Absolute Tolerance %	Absolute TC (ppm/°C)	Ratio Tolerance Referenced To R_1 (%)	TC Tracking Referenced To R_1 (ppm/°C)
R_1	1K	1/8	±1	±25	—	—
R_2	2K	1/8	±1	±25	0.02	5
R_3	4K	1/8	±1	±25	0.04	10
R_4	8K	1/8	±1	±25	0.08	20

Example No. 2

Resistor	Ohms	Watts	Absolute Tolerance %	Absolute TC (ppm/°C)

Where precision as well as long term reliability and stabiltiy are required in a small amount of space, the conformally coated SIP is the answer. This low profile SIP resistor network exhibits all the outstanding performance characteristics inherent in TaNFilm products.

Our TaNFilm manufacturing process of sputtering Tantalum Nitride on to ceramic substrates ensures uniform temperature characteristics of all the resistors in the networks. The resistance film is then anodically passivated to improve its stability and to make it virtually impervious to environmental elements.

When you need high precision and ultimate reliability in a limited space, the TaNFilm SIP is the solution. The conformally coated SIP network can be tailored to meet special circuit configurations with multiple resistance values.

TaNFilm resistor networks are designed for use in applications requiring a high degree of reliability, stability, tight tolerance, close TCR tracking, and low noise. Our continuous feed, high vacuum sputtering process insures uniform properties from network to network. Precise state-of-the-art laser trimming enables us to easily zero in the tightest ratios. Gold-plated copper leads are thermal pulse bonded to large-area gold conductor pads on the ceramic substrate assuring the most relaible termination and long-term stability. Anodically passivated Tantalum Nitride resistor material offers performance far superior to military specifications and excellent environmental protection. Over 40 billion continuous resistor operating hours in the field without a defect-related failure clearly demonstrates the reliability of our TaNFilm product.

The versatile nature of our photo-etch process makes it readily adaptable to meet special customer requirements. Custom circuit designs and special mechanical configurations can be easily achieved with a modest set up charge. Full military screening is also available with all units.

TaNFilm resistor networks are designed for use in applications requiring a high degree of reliability, stability, tight tolerance, close TCR tracking, and low noise. The sputtering process for resistor formation has been perfected to allow a continuous feed production line under high vacuum conditions, thus, insuring uniformity of properties between networks. Precise state of the art laser trimming makes tight ratios easily achievable. The gold plated copper leads are thermal pulse bonded to large area gold conductor pads on the ceramic substrate assuring the most reliable termination and long term stability. The Tantalum Nitride resistor material is anodically passivated for excellent environmental protection and performance far superior to military specifications. Reliability has been demonstrated in field usage with over 40 billion continuous resistor operating hours without a defect related failure.

Our TaNFilm process enables us to manufacture networks containing different resistance values and still maintain the tight tolerances and tracking characteristics of networks containing only a single resistance value. The nature of our photo-etch process makes it readily adaptable to meet each individual customer's needs. Custom circuit designs and special mechanical configurations can be easily achieved with a modest set up charge while maintaining our high standards of precision and reliability.

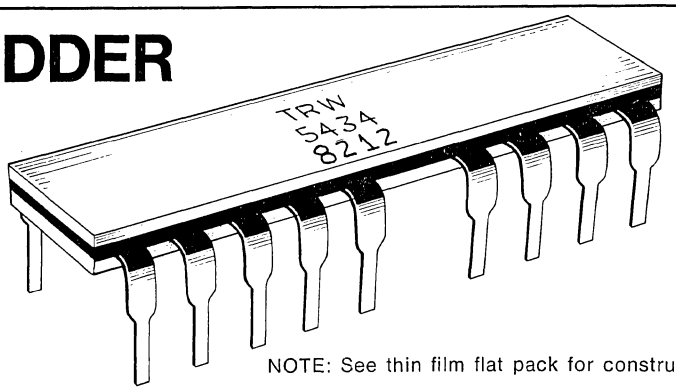
TaNFilm® R-2R LADDER

12-BIT, 20-PIN DIP

- ☐ Proven reliability
- ☐ 12 bit, ±½ LSB accuracy over 10,000 hour life
- ☐ Passivated TaNFilm for superior environmental performance
- ☐ ±122 ppm ladder accuracy over −55°C to +125°C
- ☐ Standard DIP package
- ☐ 5 standard R values



NOTE: See thin film flat pack for construction features.

The 5430 series R-2R ladder utilizes the unique characteristics of the TaNFilm process to provide the ±½ LSB, 12 bit accuracy required for precision data conversion. Our continuous sputtering process deposits Tantalum Nitride resistance film over an entire substrate of 99.5% pure alumina, ensuring virtually identical resistance temperature characteristics of all resistors in the ladder. This guarantees no degradation in ladder accuracy over the full military temperature range of −55°C to +125°C.

Anodic passivation of the resistance film results in outstanding environmental performance. More importantly, since the aging process of this film results in a slight continuation of this passivation, all resistors change at the same rate. Consequently, voltage ratios required for ladder accuracy are very stable over long term, 10,000 hour load and temperature conditions.

Large area thermocompression bonding of gold plated leads eliminates the need for fine wire bonds and provides the ultimate in strength and reliability. In addition the combination of high alumina substrate for thermal conductivity and 1.5 mil minimum resistor line width enhances reliability for the most severe applications. Reliability and stability of TaNFilm networks are proven with years of MIL-R-83401 testing and qualification.

SPECIFICATIONS

Ladder Resistance Values (R): 5K, 10K, 20K, 25K, 50K

Ladder Resistance Tolerance: ±5%

Maximum Input Voltage: 20V

Settling Time (to 0.1% of final value): 100n sec.

Temperature Range: −55°C to +125°C

External Switch Compensation (Note 1):
Models 5431-5434 — 5Ω
Model 5435 — 500Ω

Ladder Voltage Accuracy: ±122 ppm

Application Resistor Tolerance Ratio (Note 2): 0.04%

Lead Material: Gold plated copper alloy

STABILITY

TaNFilm 12 bit ladders exhibit ±122 ppm maximum voltage ratio error after the following tests (per MIL-R-83401 except as noted):

Operating Life: 1000 Hrs. Full Load 100°C

Short Time Overload: 10 Sec. 2.5 x Rated Voltage

Thermal Shock: 10 cycles −65°C to +150°C

High Temperature Exposure: 100 Hrs. @ 125°C

Moisture Cycle, Load: 10 Days

Soldering Heat: 10 Sec. @ 260°C

Shock: 100 g's for 6 Milliseconds

Vibration: 20 g's

Terminal Strength: 4.5 Lbs.

Note 1 — Consult factory for other switch compensation.

Note 2 — Ratio matching of each application resistor to ladder output resistance. Consult factory for other accuracy requirements.

Testing R-2R Ladder Networks

Conversion Accuracy Testing

TRW tests its R-2R ladders functionally by comparing the output of the DUT (device under test) with the output of a standard ladder having an accuracy of 1 ppm. The ladder networks are activated one bit at a time, starting with bit one and continuing to the LSB (least significant bit). See Figure 1. A calculator controlled scanner having low thermal mercury relays is used for the switching. The reference voltage being applied to the corresponding bit of each ladder (standard and DUT) is 10 volts. The output voltage error is measured using a calculator control DVM and is stored in the calculator memory. After all bits have been read, the plus and minus sums are found by adding the appropriate errors of all bits. Normally each of these sums must be less than one half the output of a perfect ladder with only its least significant bit energized. This is 122 ppm for 12 bit ladders. This procedure guarantees monotonicity and a worst case accuracy of less than ½ LSB.

Output Resistance Testing

The output resistance is determined by making a single measurement. All bits are connected to common and the resistance between the "OUT" terminal and common is measured. The value will be the R value of the ladder. When switch compensation is accounted for, the output reistance is ±5% of the nominal value of R.

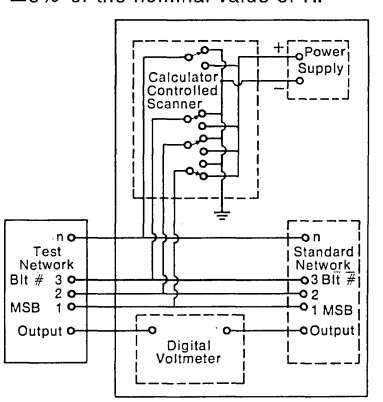

Figure 1. Conversion Accuracy Tester

RESISTIVE PRODUCTS DIVISION, TRW ELECTRONIC COMPONENTS GROUP,

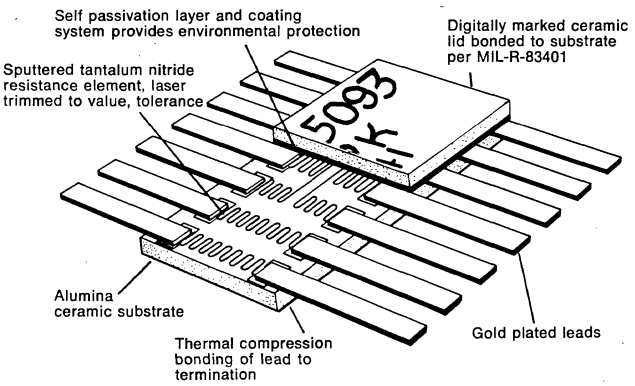
TaNFilm® R-2R LADDER
8-BIT, 16-PIN FLAT PACK

- ☐ 8 bit resolution
- ☐ Space saving size
- ☐ Superior environmental performance
- ☐ Ladder accuracy of ±½ LSB over −55°C to +125°C
- ☐ Standard 16 pin flat pack
- ☐ High reliability
- ☐ 4 standard R values



TRW's 5090 series of 8 bit, R-2R ladders combines the accuracy required for precise data conversion with the increased space efficiency that makes the flat pack such a popular package. In addition to being smaller, this particular part is ideally suited to airborne applications because of its light weight.

The unique characteristics used in our TaNFilm construction ensure high reliability and stability of the R-2R ladders. Our process of sputtering Tantalum Nitride resistance film onto 99.5% pure alumina substrates in a vacuum guarantees uniform temperature characteristics of all the resistors in the ladders. Also, TRW's R-2R ladders maintain ±½ LSB ratio accuracy throughout the full military temperature range of −55°C to +125°C.

To ensure superior environmental performance and the highest reliability available, the resistance film is anodically passivated. Aging of Tantalum Nitride networks is a slow continuation of this passivation so that all resistors in the ladder change at the same rate. Thus, voltage ratios are maintained over a 10,000 hour life and no degradation of performance occurs throughout extreme temperature conditions.

Thermocompression bonding of gold plated leads onto large gold bonding areas guarantees ultimate strength and reliability and eliminates the need for fine wire bonding. The superiority of TaNFilm networks has been proven through years of qualification testing to MIL-R-83401 specifications. Data is available upon request.

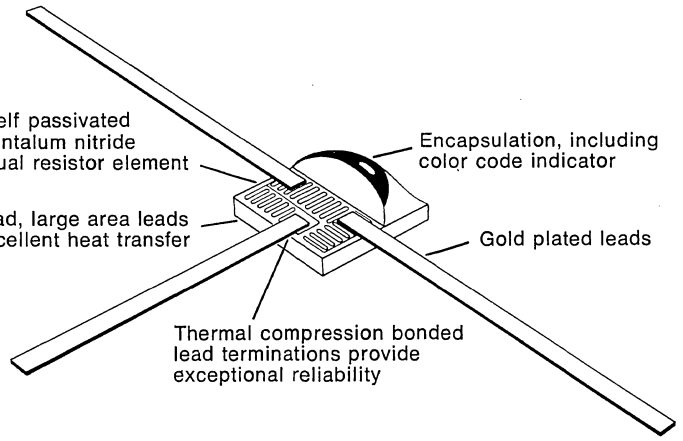
TaNFilm® SUBMINIATURE DUAL NETWORK

TaNTee SERIES

- ☐ Subminiature (0.075″ x 0.075″)
- ☐ Dual resistor, center lead common
- ☐ Available with custom testing
- ☐ Ultra precision — Absolute tolerance to ±1% — Ratios to: 0.1%
- ☐ Superior temperature performance Absolute T.C. to ±25 ppm/°C — T.C. tracking: 5 ppm/°C standard
- ☐ High frequency operation



SPECIFICATIONS

Resistance Range, each R: 10Ω to 10KΩ (See chart and schematic below)
Power Rating: ¼W @ 85°C (sum of power in both resistors)
Resistor Tolerance:
Absolute Tolerance — ±5% standard, ±1% available
Ratio Tolerance — To .1%
Moisture Resistance, ΔR: ±0.4% max.
Thermal Shock, ΔR: ±0.25% max. (5 cycles, −65°C to +125°C)
Temperature Coefficient:
Absolute — To ±25 ppm/°C
Tracking — To 5 ppm
Load Life, ΔR: ±.5% max. (1000 hrs. @ 70°C @ Rated Load)
Noise: −20 db max.
Short Time Overload, ΔR: ±0.1% max. (2.5 x rated voltage for 5 seconds)

NOTE: TaNTee resistors meet the performance requirements of MIL-R-83401, characteristic H

The TaNTee Series of TaNFilm resistor networks provide a miniature, two-resistor network adaptable to many circuit requirements. The tanalum nitride film resistors are deposited on a 25 mil thick ceramic chip .075″ x .075″, and are protected by a rugged epoxy coating. Gold plated copper leads are bonded to termination pads on the ceramic chip, resulting in a strong, reliable lead connection.

Tantalum nitride is an extremely stable metal film resistor material capable of high operating power levels and also exceptional environmental performance. The TaNTee dual resistor's physical size and construction make it ideally suited for high frequency applications. The excellent TC tracking of the two resistors on the chip provides a very stable voltage ratio, which is critical in many applications.

Standard Resistances				
10	16	27	43	68
11	18	30	47	75
12	20	33	51	82
13	22	36	56	91
15	24	39	62	
5% EIA Values				

1st and 2nd Digit		Multiplier
Black = 0	Green = 5	Black = X1
Brown = 1	Blue = 6	Brown = X10
Red = 2	Violet = 7	Red = X100
Orange = 3	Grey = 8	Orange = X1000
Yellow = 4	White = 9

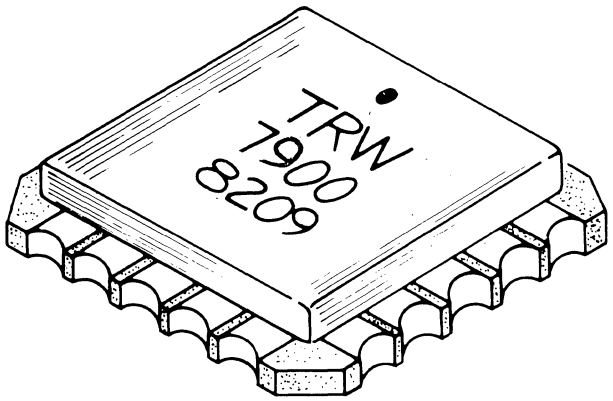
TaNFilm®
CHIP CARRIER
RESISTOR NETWORKS

- ☐ Increased component density
- ☐ Ideal for vapor phase reflow soldering
- ☐ Best tolerances: 0.1% absolute — 0.02% ratio
- ☐ Superior temperature performances: Absolute T.C. to ±25 ppm/°C — Tracking 5 ppm/°C standard
- ☐ Custom schematics readily available
- ☐ Meets JEDEC standard for Type 'C' package



SPECIFICATIONS

Resistance Values: 50Ω to 50KΩ standard; up to 100KΩ on special order
Resistance Tolerances: ±.1%, ±.25%, ±.5%, ±1%, ±2%
Temperature Coefficient of Resistance: ±25 ppm/°C, ±50 ppm/°C, ±100 ppm/°C, ±300 ppm/°C
TCR Tracking: 5 ppm/°C
Temperature Range: −55°C to +150°C
Noise: Less than −25 dB
Power Rating @ 70°C: .1 watt/resistor, .5 watt/network
Meets JEDEC standard for type 'C' package
Terminations: Gold over nickel over copper
Substrate Material: 99.5% pure alumina ceramic
Construction: Ceramic chip/epoxy encapsulant
Custom circuits and special testing available
Contact factory for any special features required.

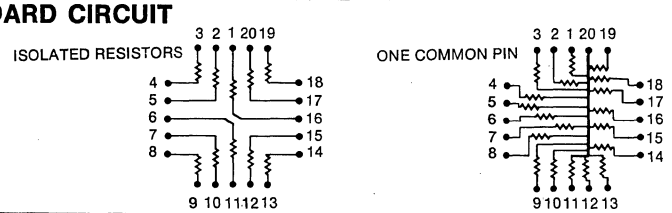
STANDARD CIRCUIT



The TRW TaNFilm chip carrier network offers higher lead density, increased component count, lower installed resistor cost, better reliability, and is ideal for use with the latest production technique — vapor phase reflow solder process. In addition, the TaNFilm leadless chip carrier network provides all the unique qualities of our other TaNFilm package configurations. Testing has demonstrated performance to MIL-R-83401 Characteristic H.

The proven TaNFilm manufacturing process enhances reliability through elimination of wire bonds. Precise state-of-the-art laser trimming provides close tolerances and tight ratios. The TaNFilm process enables us to manufacture custom circuit configurations and multiple resistance values without sacrificing the tightest tolerance and tracking characteristics of precision networks. The Tantalum Nitride resistor material is passivated for environmental protection surpassing military requirements and guaranteeing exceptional ratio stability over the full range of military environments.

For applications requiring a high degree of reliability, stability, accuracy and low noise, plus advantages of new resistor packing, specify the TRW leadless chip carrier configuration resistor network.

TRW

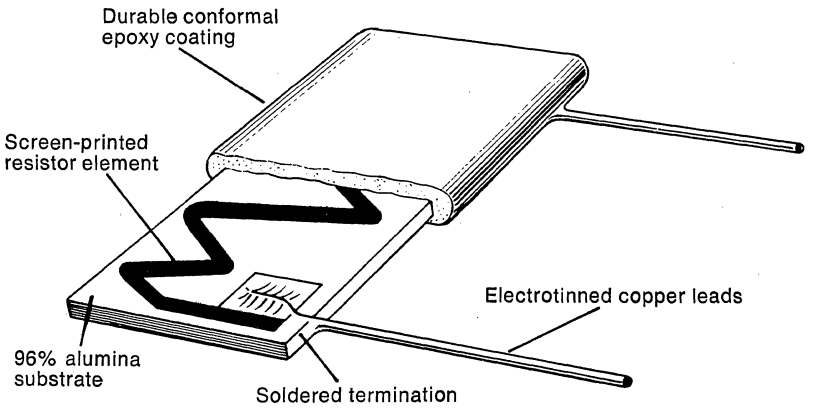
HIGH VOLTAGE THICK FILM RESISTORS

RB SERIES

- ☐ 1 watt to 5 watts
- ☐ 1 ohm to 500 megohms
- ☐ 10 KV to 25 KV
- ☐ 5% to 20% tolerance
- ☐ TCR of ±200 ppm/°C



FEATURES

- ☐ TRW proprietary non-noble thick film technology
- ☐ Space saving thin body design
- ☐ PC board compatible
- ☐ High voltage stability
- ☐ Low inductance design
- ☐ Backed by TRW high volume production capability

APPLICATIONS

- ☐ High voltage power resistors for use in:
  - Power supplies
  - Voltage multipliers
  - Electrostatic equipment
  - Copiers
- ☐ Low resistance - low inductance power resistors

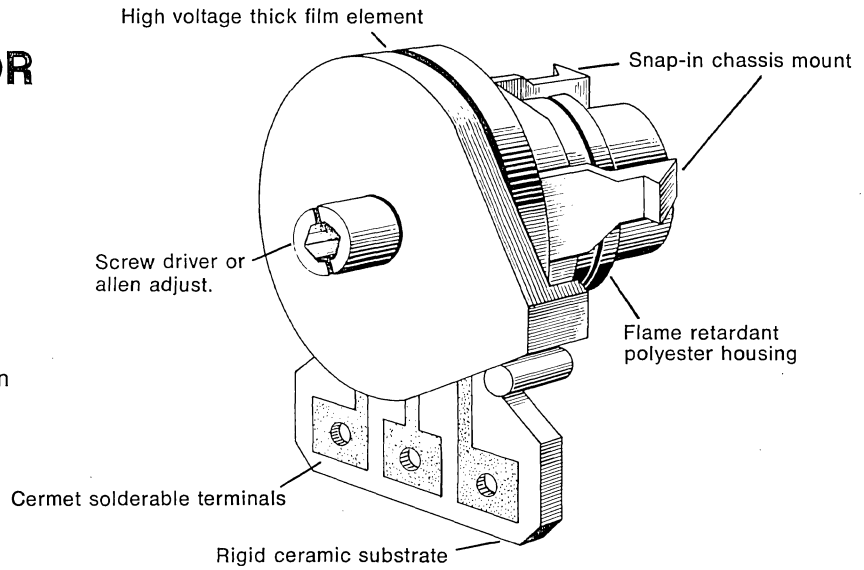
HIGH-VOLTAGE FOCUS RESISTOR

- ☐ 3 kV voltage rating
- ☐ Resistance ranges from 1 megohm to 100 megohms
- ☐ Rated 1 w at 65°C, derated to 0 at 105°C
- ☐ Potential applications include electrostatic copiers, CRT displays, computer terminals, video games and instrumentation
- ☐ Metal Glaze™ element



SPECIFICATIONS

Resistance Tolerance: Standard: ±20%; Special: ±10%

Voltage Rating: Across end terminals: 3000 VDC; Mounting plate to terminals: 7500 VDC

Tapers Available: Linear only ±20%

Terminal Minimum Resistance (Both Ends of Rotation): 10% of total resistance maximum

Temperature Coefficient (−55° to +105°C) ±400 ppm/°C

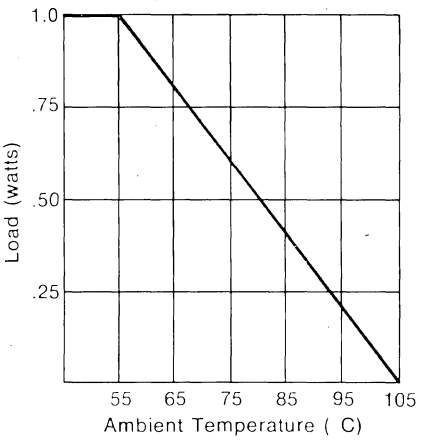
Voltage Coefficient: Less than 10 ppm/V

Rotational Torque: 1 - 8 in. oz.

Molded Materials: SE-O Rated

Environmental Performance:
- Load Life: Maximum △R after 1000 hours at 65°C ±5%
- Rotational Life (No Load): Maximum △R (after 500 cycles) ±10%
- Humidity (No Load): Maximum △R (after 240 hours at 40°C and 90 - 95% R.H.) ±5%

POWER DERATING



Note: Available with leads for PC board mounting.

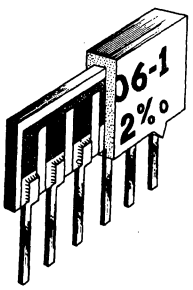
CUSTOM THICK FILM CIRCUITS

- ☐ High reliability
- ☐ Major size reduction compared to discrete components
- ☐ Cost effective in large quantities

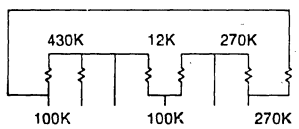


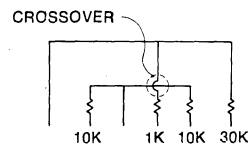
.350-in. SIP

RESISTOR-ONLY CIRCUITS

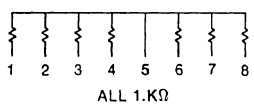
CIRCUIT VARIATIONS:

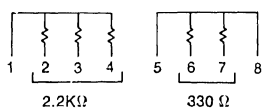
Overall the .350-in. SIP is the best choice for custom network requirements. A wide variety of circuits is possible with the extra "real estate" available on this size, including circuits requiring crossovers. Remember, however, that crossovers add significantly to the manufacturing cost of a network.

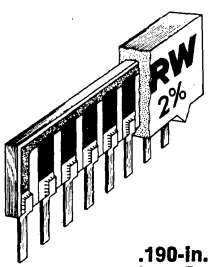




Straightforward variations to standard circuits of the .195-in. SIP are feasible, such as different common location(s), missing resistors, and multiple resistances.



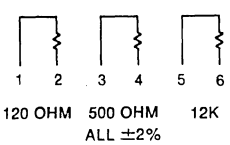


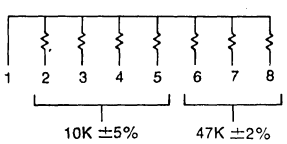


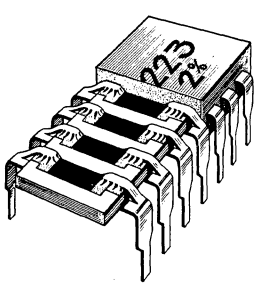
.190-in. Low-Profile SIP

MULTIPLE RESISTANCES:

Multi-value networks are available for both types. Values from 22 ohm to 1 Megohm, and multiple tolerances of ±2% and ±5% are also possible.



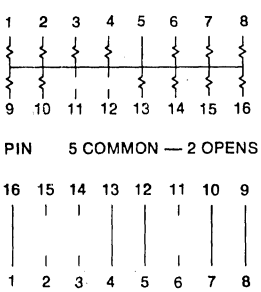




14- and 16-pin DIP

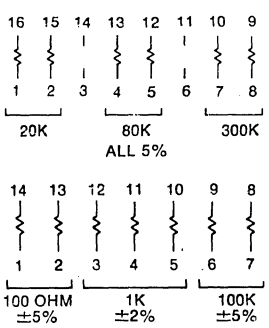
CIRCUIT VARIATIONS:

The position of the common pin can be varied, and open or shorted pins incorporated.



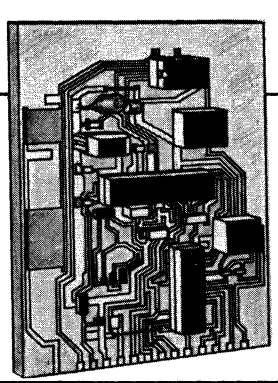
MULTIPLE RESISTANCES:

Values from 22 ohm to 1 Megohm are available, as are multiple tolerances of ±2% and ±5%.



ADDITIONAL FEATURES:

- Top Stamping — to customer specification; one 8-character line
- Missing Pins—removed external to SIP molded package, but within standoff profile
- TCR — ±150PPM
- Ratio Matching — ±2% between specified resistor pairs — ratios not to exceed 20:1



COMPLEX CUSTOM FUNCTIONAL CIRCUITS

Custom functional circuits are most applicable where size reduction and reliability are prime factors. Generally, outboard components (diodes, transistors, ICs and capacitors) are surface mounted. Resistors and conductors are screen printed and fired at 900 to 1000°C directly to the ceramic substrate.

TRW circuit features include:

- High-conductivity, leach-resistant copper conductors
- 10-ohm to 10-megohm/square resistors
- Stability characteristics as in R-only circuits above
- Cost effectivity of non-noble Metal Glaze™ thick film

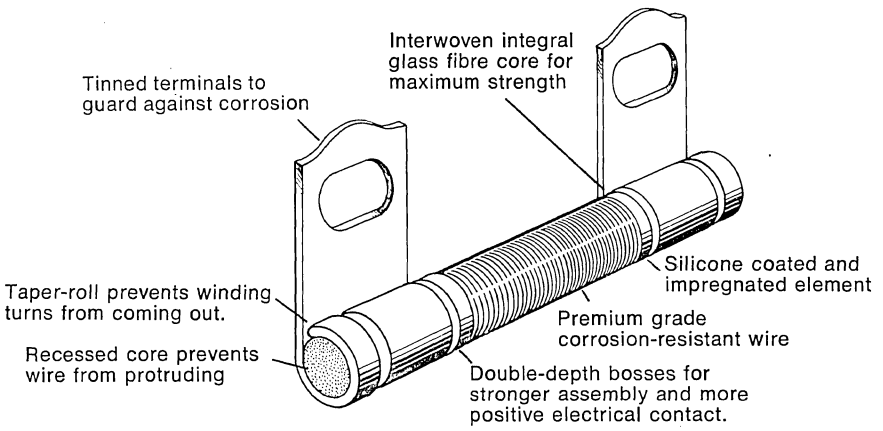
AUTOMOTIVE AND APPLIANCE POWER WIREWOUNDS

AW SERIES

- ☐ Appliance applications include food mixers, coffee makers, electric and electronic ranges, electric blankets, actuating heaters for bi-metal switches, toasters and deep fryers
- ☐ Automotive applications include horns, voltage regulators, ignition ballasts, instrument gauges, spark suppressors and windshield wipers



SPECIFICATIONS

RESISTANCE RANGE

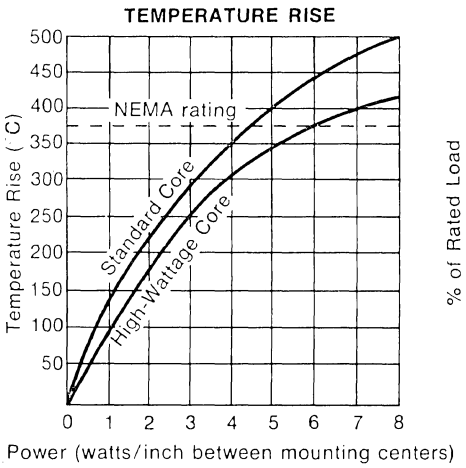
0.1 ohm minimum to 1000 ohms/in. of active length, or inside terminal dimension.

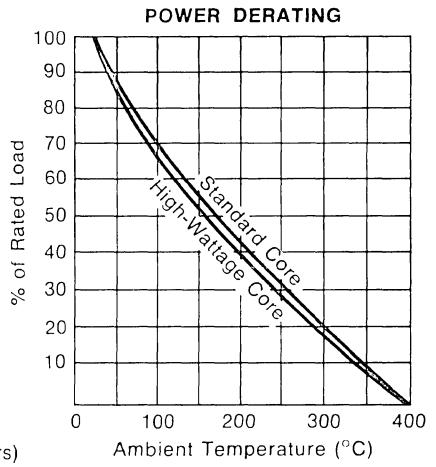
POWER RATINGS

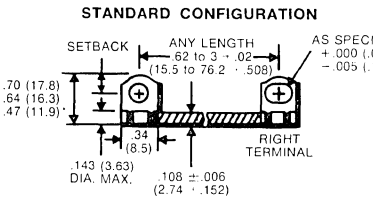
4.5 watts/in. between mounting centers on the standard AW, and 6 watts/in. between mounting centers on the high-wattage AW resistor. Higher wattages are available on low resistance values with special windings.

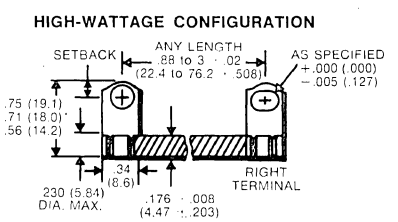
TOLERANCE

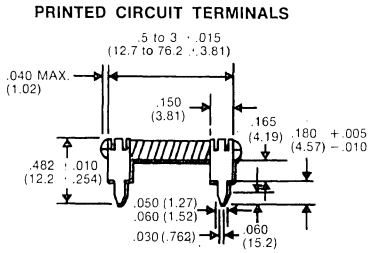
±10% tolerance is standard. Other tolerances are available on special orders.

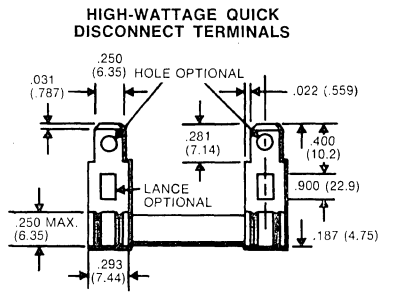












DESIGN AND CONSTRUCTION

The resistance elements of AW resistors are uniformly and tightly wound on glass fiber cores using premium quality wire. Tinned steel or tinned brass terminals are secured to the element by automatic assembly equipment. The high degree of automation used in manufacturing this resistor allows you to use a high-quality wirewound unit at low cost.

TERMINALS

Standard AW resistor terminals are 11/32 in. x .015 in. tinned steel or tinned brass. High-wattage AW resistor terminals are 11/32 in. x .020 in. tinned steel or tinned brass.

Over 50 styles of terminal mounting holes are tooled and immediately available. Any of these can be furnished with one or both mounting holes omitted and in any resistor length, within limits shown, from standard tooling. Other mounting hole sizes or terminal configurations can be made to your specification at a nominal cost.

STAMPING

Resistance value is stamped on both sides of the left terminal in large numbers.

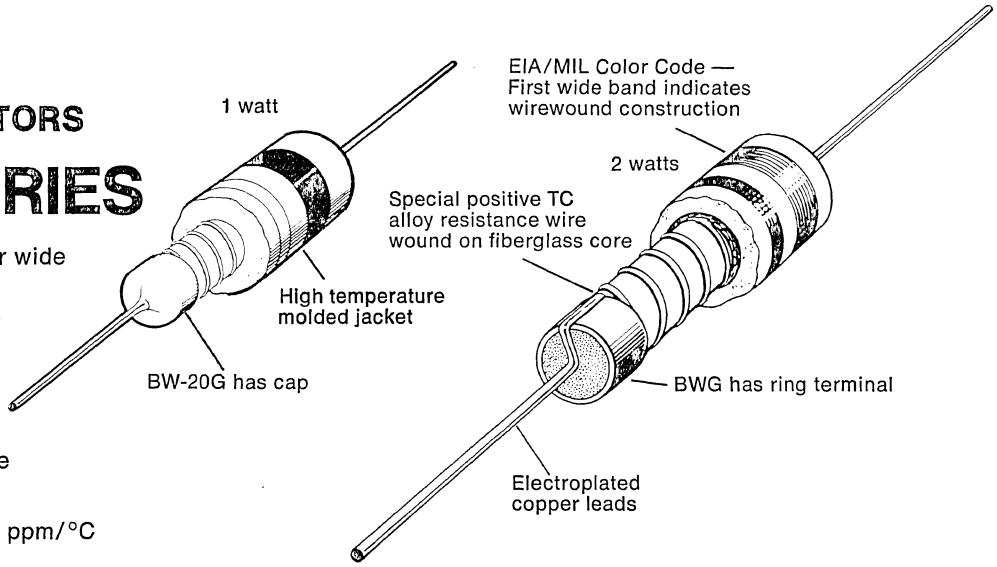
WIREWOUND TEMPERATURE SENSING RESISTORS

BWG SERIES

- ☐ Excellent linearity over wide temperature span
- ☐ Fast response time
- ☐ Small size
- ☐ Economical cost
- ☐ 1 watt, 2 watts
- ☐ ±5%, ±10% tolerance
- ☐ 0.1 ohm to 300 ohms
- ☐ TCs as high as +5500 ppm/°C

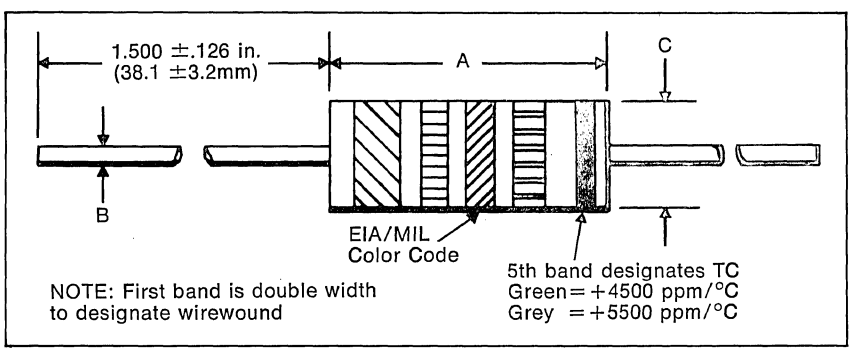


SPECIFICATIONS

Temperature Coefficient		Available Resistance in Ohms*	
PPM/°C	%/°C	BW-20G (1 watt)	BW (2 watts)
4500	0.45	0.10 to 100	0.20 to 300
5500	0.55	0.10 to 43	0.10 to 110

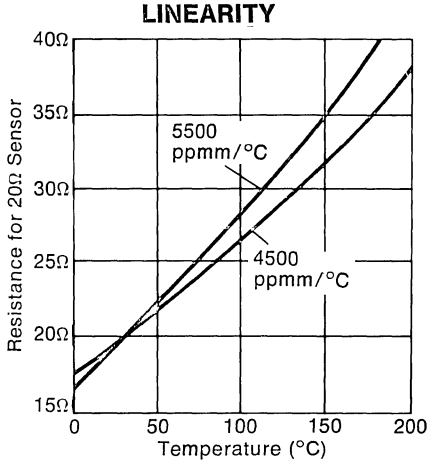
* As supplied "cold" resistance values — measured at room ambient temperature.

Temperature Range: −55°C to +150°
Power Rating: 1 watt @ 50°C for BW-20G, 2 watts @ 70°C for BWG
Standard Tolerance: ±5%, ±10%
Maximum Continuous Working Voltage: $E = \sqrt{PR}$
Minimum Dielectric Withstanding Voltage: 700V for BW-20G, 1000V for BWG
Minimum Insulation Resistance: 10,000 Meg Ω when dry, 100 Meg Ω when wet
Size Equivalent to RS344: CRU1 for BW-20G, CRU2 for BWG
Size Equivalent to MIL-R-11: RC-20 for BW-20G, RC-32 for BWG



NOTE: First band is double width to designate wirewound

LINEARITY



DIMENSIONS — IN. AND (mm)

TRW Type	A ±.010 (.25)	B ±.001 (.03)	C ±.008 (.20)

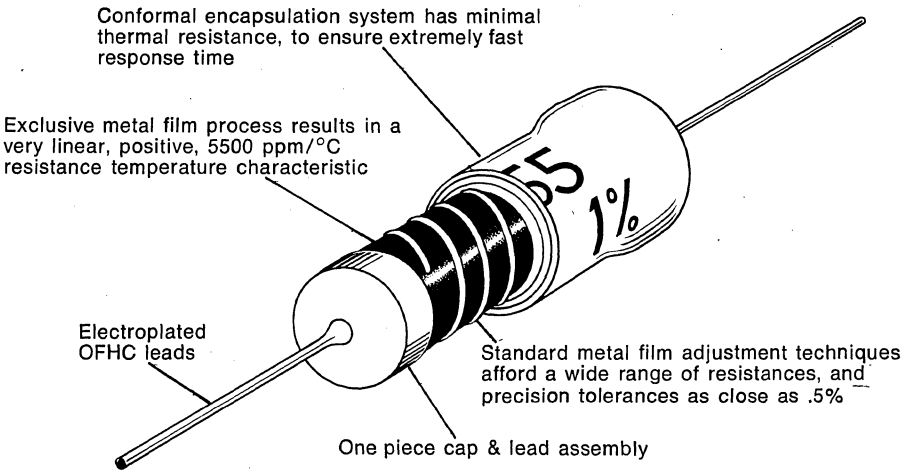
THIN FILM RESISTANCE TEMPERATURE SENSING ELEMENT

TD SERIES

- ☐ Proven metal film reliability
- ☐ Fast thermal response
- ☐ Positive temperature coefficient
- ☐ Close tolerance
- ☐ Superior linearity
- ☐ Ultra miniature



SPECIFICATIONS

Resistance Range at 25°C: TD50 - 100Ω to 2KΩ, TD55 - 100Ω to 3KΩ

Temperature Coefficient: +5000 ±100 ppm/°C at 25°C; +6000 ±120 ppm/°C at 100°C

Tolerance at 25°C: ±.5%, ±1% or ±2%

Oper. Temp. Range: −55°C to +175°C

Interchangeability Accuracy: ±.9°C @ 25°C for .5% tolerance — ±1.8°C @ 25°C for 1% tolerance — ±3.6°C @ 25°C for 2% tolerance

Accuracy Limits: ±1.5°C for .5% tolerance (−50°C to +100°C) — ±3°C for 1% tolerance (−50°C to +100°C) ±6°C for 2% tolerance (−50°C to +100°C)

Retracking Error: <.05% of nominal (−55°C to +175°C)

Resistance Ratio: R @ 125°C/R @ 25°C =1.57

Linearity: <1.2% maximum deviation from best straight line fit over any 100°C interval between −55°C and +175°C

Thermal Time Constant: TD50 - 3.7 sec. maximum, TD55 - 5.5 sec maximum. (Time to achieve 63.2% of an applied step change in still air)

Dissipation Constants: TD50 - 4.1 mW/°C, TD55 - 6.2 mW/°C (Power required to raise sensor temperature 1°C in still air at 25°C)

ENVIRONMENTAL PERFORMANCE

Type of Test	Maximum ΔR	Typical ΔR
Thermal Shock (5 Cycles, −55°C to +175°C)	.068%	.040%
Effect of Solder	.15%	.02%
Moisture Resistance	.50%	.15%

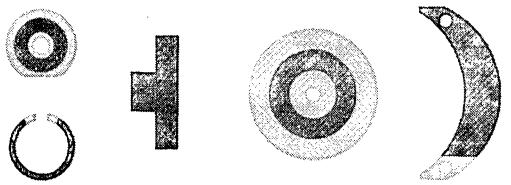
RESISTANCE STRIPS & DISCS



SPECIFICATIONS

ELEMENTS

TRW resistance strips consist of a high grade paper-base phenolic laminate with the resistance material permanently bonded to the surface. Disc resistors are simply die stamped from a resistance strip.

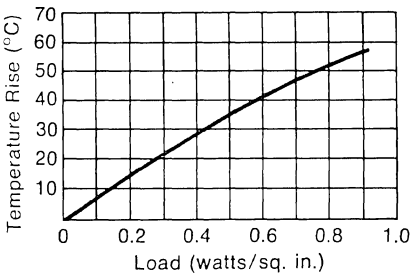
Strips can be supplied with a low-resistance colloidal silver contact coating over any portion of the surface where a low-resistance positive contact is desired. On discs, inner and outer rings of colloidal silver are applied to provide contact with coaxial line fixtures.

For both strips and discs, mechanical pressure type contacts must be used rather than soldered connections.

RESISTANCE VALUES

Strips are available with resistances from 19 ohms/square to 1.0 megohm/square. Standard disc values range from 5 ohms to 100,000 ohms.

TEMPERATURE RISE



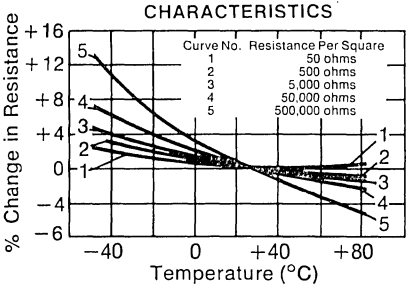
TOLERANCE

Standard tolerance is ±20%. Special tolerances of ±15% and ±10% are available on special order.

VOLTAGE RATING

Maximum rated voltage is 500 volts per inch of current path.

TEMPERATURE-RESISTANCE CHARACTERISTICS



VOLTAGE COEFFICIENT

The voltage coefficient of resistance is negative and varies from approximately −0.001%/volt/inch of active strip length (for coatings of 19 ohms/square) to −0.03%/volt/inch of active strip length (for coatings of 1.0 megohm/square).

TEMPERATURE COEFFICIENT

The temperature coefficient of resistance between 25° and 80°C varies from +0.05%/°C (for coatings of 19 ohms/square) to −0.12%/°C (for coatings of 1.0 megohm/square). Approximate temperature resistance characteristics for temperatures ranging from −55° to +80°C may be determined from the curve above.

AGING

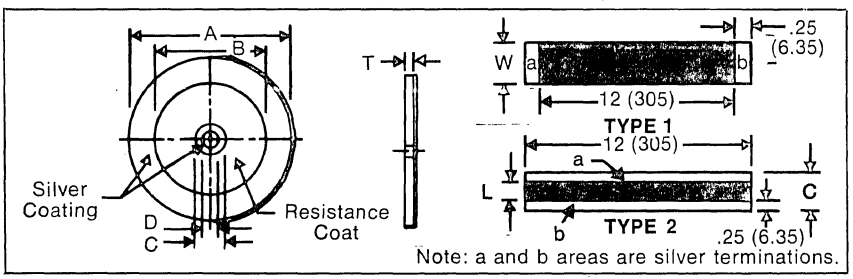
At room temperature, the resistance will remain within ±5% of the original value over extended periods of time.

HUMIDITY

Change of resistance during exposure to 90% relative humidity for 100 hours at 40°C is approximately +5% for low-resistance coatings. This increases somewhat with resistance value. At completion of the humidity test, the resistance returns very closely to its original values within a few days.

POWER RATINGS

Maximum power load should be such that the maximum surface operating temperature does not exceed 80°C. The allowable load per square inch for an ambient temperature of 25°C on a resistance strip suspended in free air is 0.95 watts.



Note: a and b areas are silver terminations.

HOW TO ORDER

To order standard resistance strips, specify the type of strip desired, total width of strip, resistance value in ohms/square, and quantity desired. For special resistance strips, provide these specifications and as much information as possible about the proposed application.

Standard concentric disc resistors should be ordered by the disc type, total resistance between silver terminals, and resistance tolerance. For special concentric discs, give all dimensions shown on the drawing at left, plus total resistance between silver terminals and resistance tolerance.

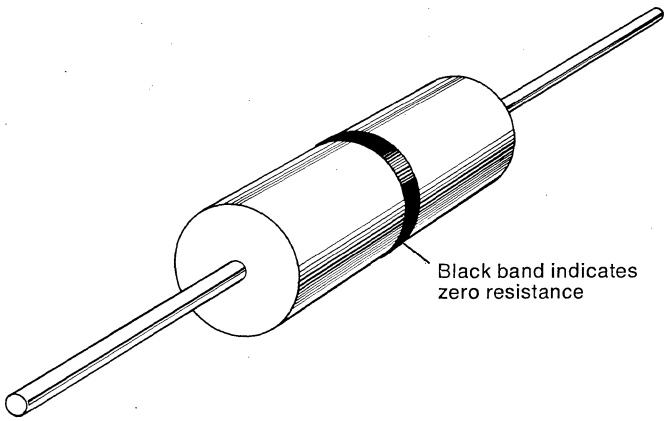
MOLDED JUMPER WIRES ZEROHM

- ☐ Straight-through wire — no internal connections
- ☐ Molded jacket is standard ¼-watt size
- ☐ Supplied on lead tape and reel for automatic insertion



SPECIFICATIONS

Maximum Resistance: 0.01 ohm

Lead Material: Leads are copperclad steel with TRW's 30/70 solder alloy coating to allow both welding and soldering operations

Body Material: Electrical grade, high performance, molding compound

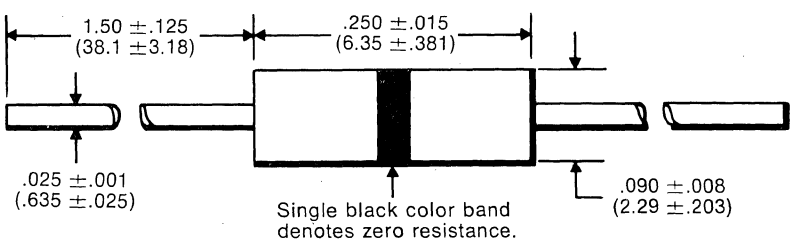
Minimum Insulation Resistance: Dry, 10,000 megohm; Wet, 100 megohm

Minimum Dielectric Withstanding Voltage: Atmospheric, 500V RMS; Reduced, 325V RMS

Insulation Flammability: Resistor insulation is self extinguishing within 10 seconds after externally applied flame is removed

Current Rating: 25 amps at 25°C, derating to 0 amps at 150°C

DIMENSIONS — IN. AND (mm)



APPLICATIONS

Molded jumper wires or crossovers, as they are sometimes called, are basically interconnection devices between points on a PC board.

Generally they are used for the following reasons:

- Inability to connect two points on a PC board due to other circuit paths which must be crossed over.
- An after-the-fact design change that requires new point connections.
- Circuit tuning by changing point connections.

TRW's molded jumper wires offer a quick simple solution to these problems. They are especially suited for automatic machine insertion on lead tape, and are available in all packaging styles including pre-cut and formed leads for manual insertion.

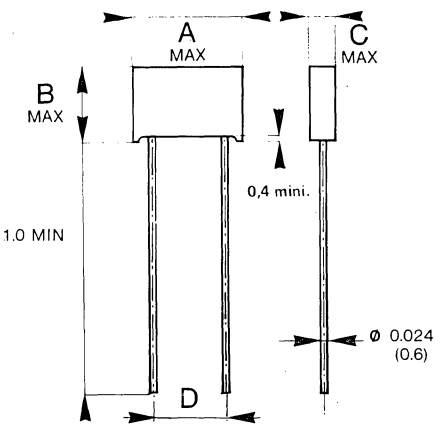
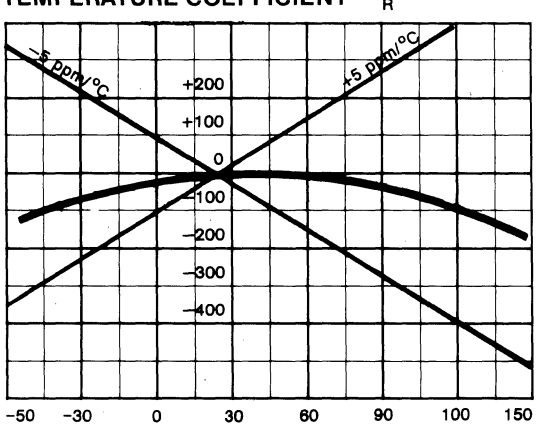
RCK06	1.200 (30.5)	.531 (13.5)	.256 (6.5)	.900 (22.86)



TEMPERATURE COEFFICIENT $\frac{\Delta R}{R}$ ppm



The T.C. of RCK resistors is always better than ± 5 ppm/°C in the temperature range −55°C to +155°C.

More generally, the T.C. is positive towards the very low temperatures, typical values +3 ppm/°C for −55°C.

It is negative towards the high temperatures, typical value −3 ppm/°C for +155°C.

For temperature variations of about 20 to 30°C from the 25°C ambient temperature, the T.C. is very low.

In the temperature range 0°C to +60°C it can be reduced to a value below ± 1 ppm/°C.

For a group of resistors, T.C. matching can be made to better than ± 0.5 ppm/°C.

MIL QUALIFICATION TO MIL-R-39005 AND MIL-R-93

SPECIFICATIONS

MINIMUM VALUES
Generally 0.1Ω for 1% and 0.5% and 10Ω for 0.1% and tighter.

TOLERANCES (±)
Standards are 0.005%, 0.01%, 0.02%, 0.05%, 0.1%, 0.5% and 1% depending on style and value.

TEMPERATURE COEFFICIENTS
± 5 ppm/°C standard for 10Ω and above. Higher T.C.'s on low ohmic values.
±1 ppm/°C available. TC match to ±0.5 ppm/°C.
High T.C.'s up to + 6000 ppm/°C are available.

MINIMUM RESISTANCE

0.1Ω for solenoid winding depending on tolerance
10Ω for non-inductive winding

TOLERANCES AVAILABLE

±0.1%, 0.25%, 0.5%, 1%, 3%, 5%, & 10%

TEMPERATURE COEFFICIENTS

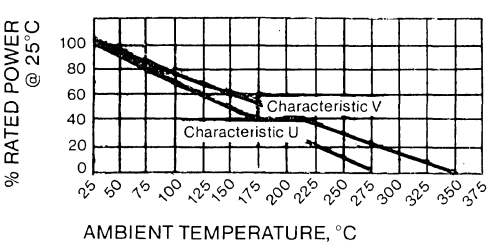
Standard ± 90PPM/°C R<1Ω
± 50PPM/°C 1Ω≤R<10Ω
± 20PPM/°C R≥ 10
Special to + 6000PPM/°C

NON INDUCTIVE WINDING–ADD PREFIX N

Divide maximum resistance by two.
Multiply maximum working voltage by 0.707
Where possible, specify maximum inductance or capacitance allowable at a specific frequency.

POWER RATING:

In order to maintain a constant maximum hot spot temperature, it is necessary to limit the applied power to the resistor when operating in environments having an ambient temperature higher than 25°C. The chart below shows this operating for characteristic U resistors of 1% tolerance and characteristic V resistors of 3% and looser tolerance.



Closer tolerances require further derating as follows:

Tolerance	% of rated power at 25°C.
±0.5%	72
±0.25%	61
±0.1%	50

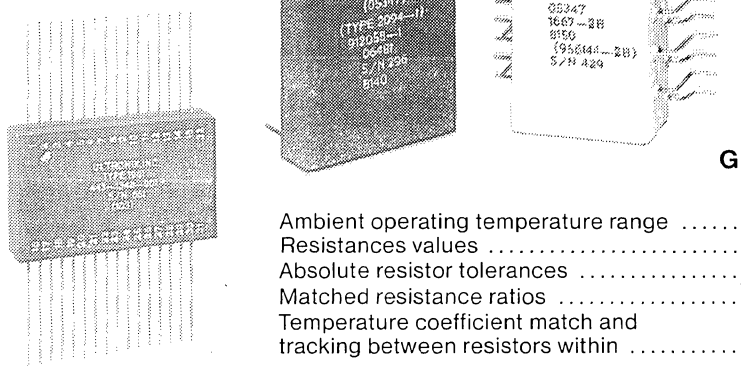
wirewound networks and custom requirements

CALL FOR OUR APPLICATIONS ENGINEERS TO ASSIST YOU WITH YOUR DESIGN REQUIREMENTS

CUSTOM DESIGNED NETWORKS AND MATCHED SETS



Matched resistor sets and custom designed networks are available from Ultronix for equipment design requiring close ratio matching and temperature tracking of resistors.

Our networks are used in a wide variety of applications such as communications satellites, precision instrumentation, aircraft controls, etc.

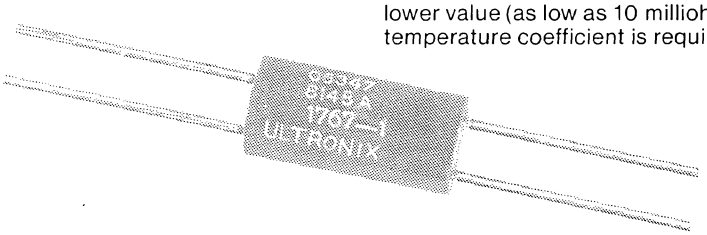
GENERAL SPECIFICATIONS AVAILABLE

Ambient operating temperature range	−55°C to 125°C
Resistances values	0.1 ohm to 40M ohm
Absolute resistor tolerances	up to ±0.005%
Matched resistance ratios	up to ±0.001%
Temperature coefficient match and tracking between resistors within	±1 ppm from 0°C to +85°C

Low reactance and rise times as low as 0.02 microseconds.
AC resistance match at frequence determined by user.

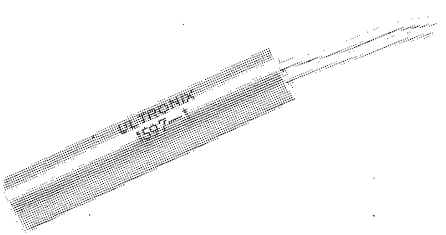
VERY LOW OHM, ULTRA PRECISION FOUR TERMINAL CURRENT SHUNTS

Ultronix manufactures a large variety of four-terminal resistors and networks for specialized applications. These are used in requirements of lower value (as low as 10 milliohms) where high precision and low temperature coefficient is required.



CUSTOM WIREWOUND TEMPERATURE SENSORS

Ultronix temperature sensors are available with temperature coefficients from −50 to +6000 PPM/°C. Various alloys and metals are used to obtain the required range of resistance change with temperature for trimming, tracking, compensation and matching. These units may be in metal housings such as brass, aluminum, or stainless steel, or molded in various epoxies or silicone.



COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

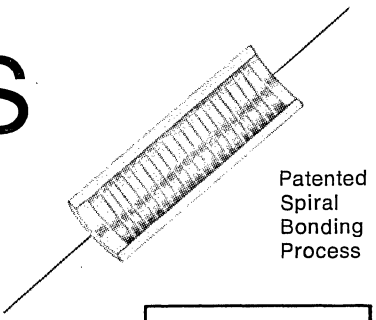
WPS word processing software

Y

YIG yttrium iron garnet

The New VAMISTOR

Hermetically Sealed, Established High Reliability Metal Film RESISTORS



Patented Spiral Bonding Process

EXCLUSIVE FEATURES OF VAMISTOR RESISTORS

Unique Patented Construction Produces Highest Reliability
Capable of handling twice the power of other film resistors of the same size.

FEATURES:

- Inherent High Reliability by Design.
- Inside Metal Film is Contamination-Free.
- Hermetic Seal Requires No Outer Sleeve.
- Higher Wattage in Standard Dimensions.
- Low Noise Level.
- Low Voltage Coefficient.
- Leakage Rate Less Than 1 x 10^{-9} CC/Sec.
- Nonflammable Epoxy Insulation.
- Exceeds MIL-R-55182 (Refer to Derating Curve) Performance Explanations.
- Standard Temperature Coefficients to 0 ±10 PPM/°C.
- Matched Sets, Both Tolerances and TC Available.
- Tolerances 1%, 0.5%, 0.25%, 0.1%.

Special Units Available

- HI-REL Resistors to exceed MIL specs
- Matched sets to meet any level
- Special TC Coefficients to 0°PPM

VAMISTOR TYPES APPROVED PER MIL-R-55182

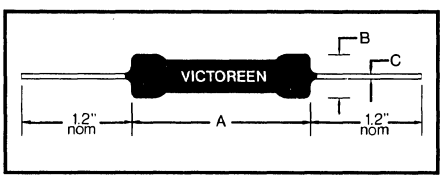
VICTOREEN Carbon & Metal Film Resistors

From general purpose thru extreme precision, Victoreen now offers low-priced Carbon and Metal Film Resistors.

In addition to our broad based stock, custom stocking plans are available to fit your needs.

VCF-125,250,500 (Carbon Film)

- Wide resistance range: 1 ohm to 10M ohm
- Tolerances available: 1, 2 & 5%
- Packaging variety: Bulk, Tape & Reel, Ammo Pack
- Cut and form leads available as required
- Custom stocking plans available
- Epoxy conformal coated

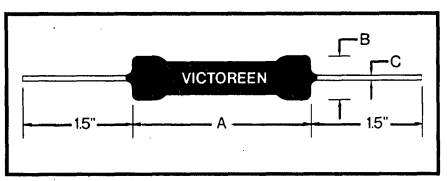


Dimensions (in inches)

Type	A Max. Length	B Max. O.D.	C Nominal
VCF-125	0.150	0.080	0.020
VCF-250	0.270	0.110	0.024
VCF-500	0.410	0.160	0.024

VMF-55,60 (Metal Film)

- Wide Temperature Coefficient range: 25, 50, 100PPM/°C
- Tolerances available: 0.25%, 0.5%, 1%, 2%, 5%
- Packaging variety: Bulk, Tape & Reel, Ammo Pack
- Cut and form leads available as required
- Custom stocking plans available
- Epoxy conformal coated



Dimensions (in inches)

Type	A Max. Length	B Max. O.D.	C Nominal
VMF-55	0.275	0.105	0.024
VMF-60	0.400	0.155	0.028

Capabilities

Type	Resistance Range (ohm)	Power Rating (@ 70°C.)	Voltage Rating
VCF-125	1 - 1M	1/8W	200V
VCF-250	1 - 10M	1/4W	250V
VCF-500	1 - 10M	1/2W	350V
VMF-55	10 - 1M	1/4W	250V
VMF-60	10 - 1M	1/2W	500V

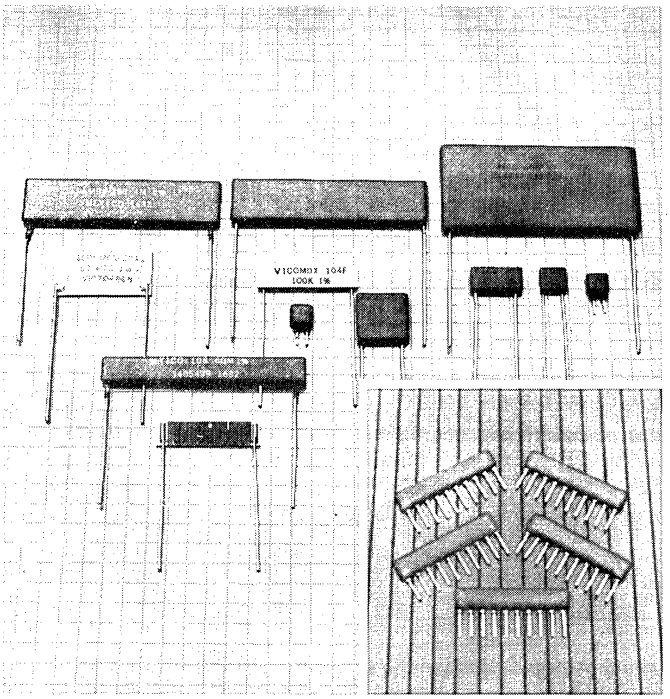
VICTOREEN Slim-Mox and S.I.P. Networks

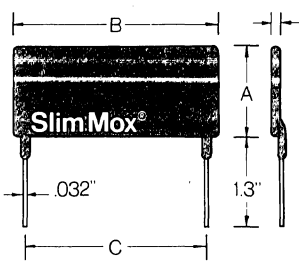
Slim-Mox Resistors are ideal for applications where high voltage/high impedance or high density packaging are benefits to the designer.

S.I.P. Networks are available from 47 ohm to 2.2 megs, with stocking plans available to fit your needs.



Slim-Mox

- Stocking values available
- Wide resistance range to 50,000 Meg ohm
- Voltage capability to 18 KV
- Power rating to 5 Watts
- Tolerances from 0.5 to 20%
- Epoxy conformal coated



SLIM-MOX	A Max. Length	B Max. O.D.	C Nominal
102	0.34	0.58	0.4
104	0.34	1.08	0.9
108	0.34	2.08	1.9
202	0.59	0.58	0.4
204	0.59	1.08	0.9
208	0.59	2.08	1.9
308	0.84	2.08	1.9

Capabilities

Type	Resistance Range (ohm)	Power Rating (@ 70°C.)	Voltage Rating
SLIM MOX-102	1K-10,000M	0.5W	2500V
SLIM MOX-104	1K-50,000M	1.0W	5000V
SLIM MOX-108	1K-50,000M	2.0W	10,000V
SLIM MOX-202	1K-30,000M	1.0W	5000V

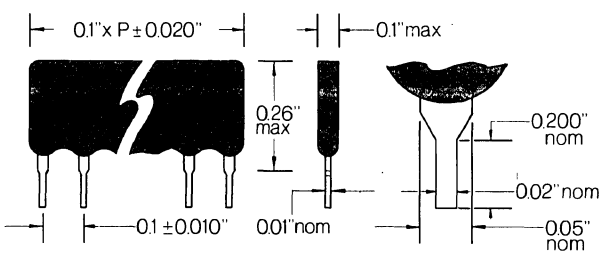
SLIM MOX-308	1K-50,000M	5.0W	18,000V

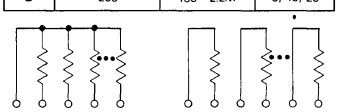
VNK-1V,2V

- Wide resistance range: 47 ohm to 2.2 Meg ohm
- Tolerances available: 2, 5, 10 & 20%
- Bulk package
- Custom stocking plans available
- Epoxy conformal coated
- 5 to 14 pin configurations available



Capabilities

Code	Temperature Coefficient (PPM/°C)	Resistance Range (ohm)	Tolerance (%)
A	150	47 - 2.2M	2, 5
B	200	100 - 2.2M	5, 10, 20



Type 1V
Pin One Common

Type 2V

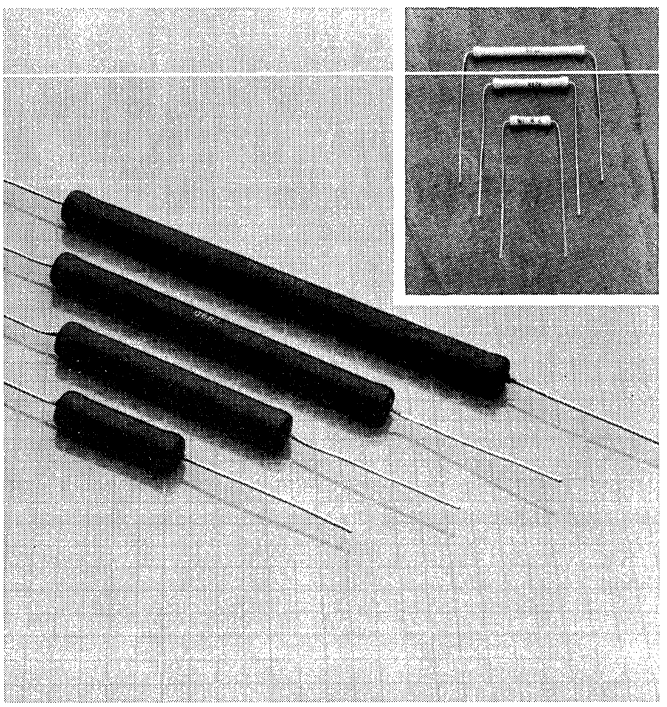
VICTOREEN

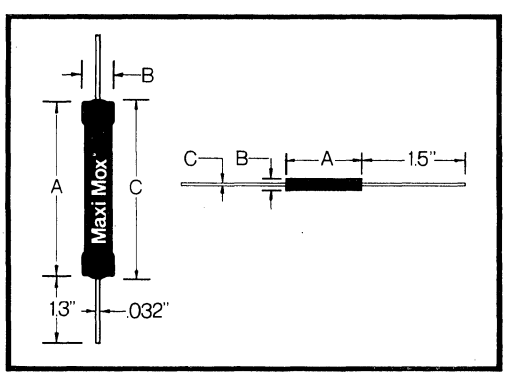
VICTOREEN
High Voltage Mini and Maxi Mox Resistors

Mini and Maxi Mox Resistors have historically been custom-manufactured resistors.
NOW AVAILABLE FROM STOCK.



Mini-Mox/ Maxi-Mox

- Stocking values available
- Wide resistance range to 50,000 Meg ohm
- Voltage capability to 37.5 KV
- Power rating to 12.5 Watts
- Tolerances from 0.5 to 15%
- Epoxy conformal coated



Capabilities

Type	Resistance Range (ohm)	Power Rating (@ 70°C.)	Voltage Rating
MOX-200	1M - 1000M	.25W	500V

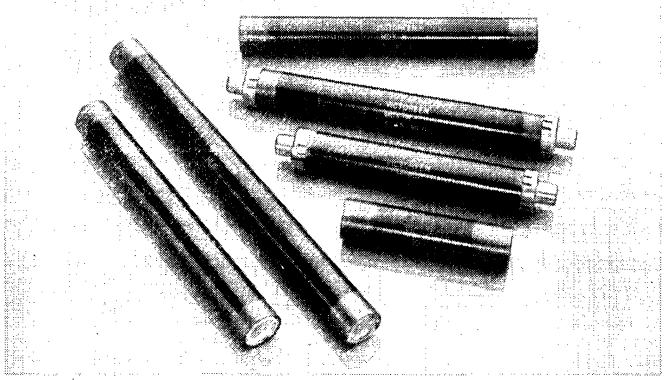
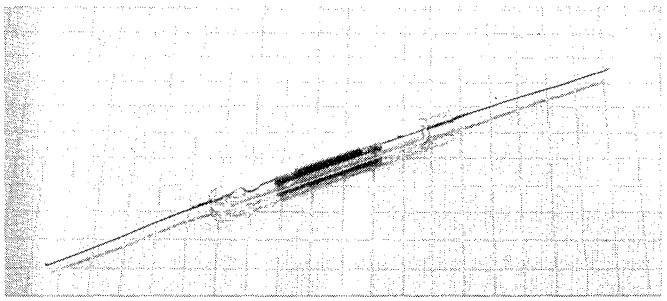
VICTOREEN





VICTOREEN Power-Mox and RX-1 Hi-Megs

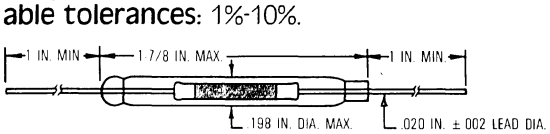
From one extreme to the other, Power-Mox Resistors for the high power/high voltage needs, RX-1 Resistors for the lower voltage, high impedance applications. Also for any applications in between.

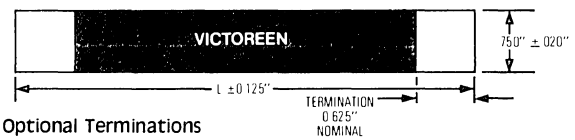
Power-Mox Series

Victoreen's Power-Mox series is ideal for applications where high power, voltage and stability are required. With power and voltage ratings to 60 watts and 60KV respectively, this series of resistors when used in applications such as x-ray, power supplies and electrostatic precipitaters, becomes the key to quality, high reliability end products.

RX-1 Hi-Megs

VICTOREEN'S HI-MEG RESISTORS were originally designed for use in electrometer circuits where a high order of performance is required. HI-MEG resistors achieve a high degree of accuracy and stability, and operate at this high level for a long period of time. The HI-MEGS are manufactured in accordance with MIL-R-14293A, characteristic T, and therefore are measured at 25 volts. Reference to the average voltage coefficient curve below will indicate that deviations from the marked resistance value may be encountered when used at higher voltages. By special order, Victoreen can supply resistors with resistance measurements at specified voltages. **Resistance range:** 10 Meg ohm-1,000,000 Meg ohm. **Available tolerances:** 1%-10%.





Optional Terminations

A. 1/4-20 Threaded End Cap B. 0.40" Ferrule C. Radial Bands

Capabilities

Type	Length	Resistance Range	Voltage Rating*	Power Rating (@ 70°C.)
MOX-F	3.0	10K - 3000 Meg	20KV	22.5W
MOX-G	4.5	10K - 5000 Meg	30KV	34.0W
MOX-H	6.0	10K - 7000 Meg	45KV	45.0W
MOX-J	8.0	10K - 10,000 Meg	60KV	60.0W

* When used above 40KV, some method of corona suppression is required.

AVERAGE VOLTAGE COEFFICIENT VERSUS RESISTANCE

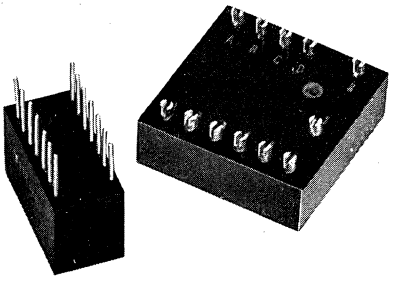
Standard and Custom Resistance Networks



CUSTOM AND STANDARD BINARY LADDER NETWORKS, BCD LADDERS, ETC.

- Up to 16 bits
- ½ LSB to ±0.001 full-scale accuracy
- 25-ppm total impedance stability over 3 years

Besides designing completely custom precision networks to your most demanding specifications, Vishay offers standard binary R-2R ladder networks in 4-bit to 16-bit configurations (voltage-fed) with resistance values from 1 ohm to 50kΩ; 2R to 100kΩ.

Three basic package styles (nominal dimensions): **Profile 500,** 0.750" (19.05 mm) W x 0.500" (12.70 mm) H. **Profile 375,** 1.230" (31.24 mm) W x 0.365" (9.27 mm) H. Lengths dependent on number of bits: min. 0.700" (17.78 mm) for 4-bit Profile 500 to 2.14" (54.35 mm) for 16-bit ladder; min. 0.730" (18.54 mm) for Profile 375 to 2.59" (65.78 mm) for 15-bit package. **Profile 200,** 1.0" (25.4 mm) W x 1.0" (25.4 mm) L x 0.200" (5.08 mm) H only.

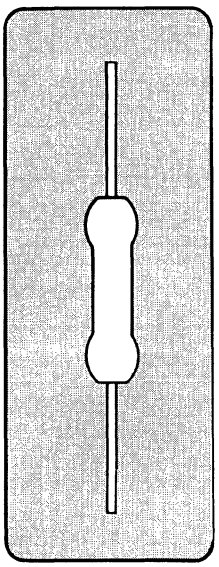
Ward Leonard Axial Lead Resistors



Application

These miniaturized, space-saving axial lead resistors find wide-spread application in computers, instruments, communication, and other electronic equipment. Axiohm® resistors meet the exacting requirements of printed circuit board and other automated equipment in addition to terminal board, point-to-point wiring, and mechanical connections.

Construction

Precision dimensioned ceramic cores are equipped with end caps and tinned axial leads for fast, easy soldering. Low TC alloy resistance wire is spot welded to end caps insuring a permanent low resistance bond. The cement, silicone, or vitreous enamel coating seals and protects the resistance wire.

Temperature Coefficient

Standard T.C. is ±180ppm/°C.

Resistance Tolerance

Standard ±5%. Closer tolerances on special order.

Optional Features

Non-Inductive Resistors — Specially designed axial lead resistors can be supplied for high frequency circuits. These resistors utilize the Ayrton-Perry method of winding in which two single layer windings run in opposite directions and cross at points 180° apart providing minimum inductance and distributed capacitance.

Controlled or Limited Inductance — Resistors are available with special single windings in which the winding is controlled not to exceed a specified inductance.

Reel Packs — Single or double adhesive tape for bulk packing resistors for automatic feeding in automated assembly line can be supplied.

Ordering Information

1. Quantity
2. State watt rating, type coating (C = Cement, SX = Silicone, X = Vitreous enamel) and ohms. Example: A five watt cement coated axial lead resistor of 1,000 ohms would be ordered as 5C1000.
3. Resistance tolerance if other than standard ±5%.
4. Optional features
5. T.C. Other Than Standard

Fixed Tubular Resistors

Application

Fixed resistors introduce only one pre-determined amount of resistance into a circuit.

Construction

Standard fixed tubular resistors are single layer wound and furnished with two lug terminals that are pre-tinned for fast, easy soldering. They can be supplied with cement, silicone or vitreous enamel coatings.

Resistance Tolerance

±5% standard. Below one ohm ±10%.

Ordering Information

1. Quantity required.
2. Watt rating.
3. Type coating (FC = cement, FS = silicone, F = vitreous enamel).
4. Resistance value (in ohms).
   Example: A 10-watt cement coated fixed resistor of 500 ohms would be ordered as 10FC500.

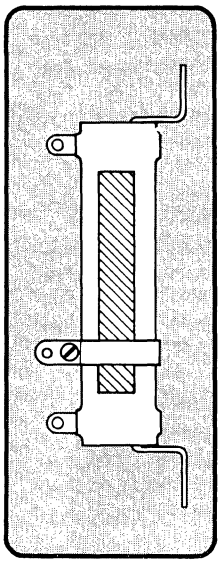
Ward Leonard

Adjustable Tubular Resistors



Application

Ward Leonard Adjustohm® resistors are designed for use in electronic and other circuitry where resistance values must be adjusted from time to time or where intermediate resistance values are required.

Construction

Adjustable tubular resistors are manufactured to the same precise specifications as fixed tubular resistors. Each wire-wound resistor has a bare side, two lug terminals and one adjustable band.

Ordering Information

1. Quantity required 2. Watt rating
3. Type coating (AC=cement, AS=silicone, A=vitreous enamel)
4. Resistance value (in ohms)

Example: A 12 watt cement coated adjustable resistor of 1,000 ohms would be ordered as 12AC1000.

Adjustable Bands

Resistor Size (in Watts)	Band Cat. No.
12	609
30	612
50	612
70	612
130	615
180	615
225	615

NOTE: When adjustable contact band is positioned to obtain resistance required, the power rating must be lowered in proportion to the adjusted resistance to nominal. To determine power rating, use the following equation:

$$P_M = \frac{R_A}{R_N}$$

Where: P_M=Max. Power Rating (in Watts)
R_A=Resistance in Ohms (Adjusted)
R_N=Resistance in Ohms (Nominal)

POTENTIOMETER
CAPITAL OF THE WORLD

FROM LOW-COST CARBON SINGLE-TURNS TO SEALED PRECISION MULTI-TURNS... MURATA ERIE HAS THEM ALL!

Murata Erie manufactures one of the broadest potentiometer lines in the world. For commercial and industrial applications—single-turn trimmers in carbon, cermet and conductive plastic in all popular resistances, mounting configurations and power ratings from 1/10 watt to 3/4 watt. For instrumentation and other precision applications—single- and multi-turn trimmers with from 1 to 25 turns full range, ¼ watt to 1 watt ratings and standard square, rectangular and circular configurations.

For complete technical details write to Murata Erie North America, Inc., 1148 Franklin Road, SE, Marietta, Georgia 30067 or call 404-952-9777.

		Conductive Plastic	100 Ohms to 1 Megohm ±10%, ±20%	0.5 Watt @ 70° C					
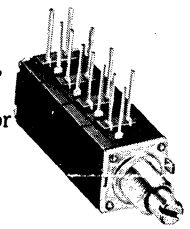
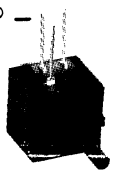
J(RV4)	EC5607-2.1	Hot-Molded Composition	50 Ohms to 5 Megohms ±10%, ±20%	2.25 Watts @ 70° C	500V	−55° C to +120° C	1, 2 or 3	0.625 (15,88) Deep by 1.156 (29,36) Diameter (Single Section) [1]	
EJ	EC5620-2.1			2.25 Watts @ 70° C			1 or 2		
G(RV6)	EC5605-2.1		100 Ohms to 5 Megohms ±10%, ±20%	0.5 Watt @ 70° C	350V	−55° C to +120° C	1	For G and W: 0.469 (11,91) Deep For WR: 0.422 (10,72) Deep by 0.500 (12,70) Diameter Above dimensions for types G and WR do not include the available switch option [1]	Immersion Sealed
W(RV6) WP	EC5612-2.1			0.5 Watt @ 70° C		−55° C to +120° C	1		
WR	EC5650-2.1			0.5 Watt @ 70° C					Dust and Splash Resistant
SP	EC5640-2.1	Cermet	50 Ohms to 1 Megohm ±10% (5% available)	1.0 Watt @ 70° C	300V	−65° C to +150° C		0.438 (11,11) Deep by 0.375 (9,52) Diameter	Immersion Sealed
M	EC5610-2.1	Conductive Plastic	100 Ohms to 1 Megohm ±20%	0.1 Watt @ 40° C	90V	−25° C to +100° C	1 or 2	0.394 (10,0) Cubed All Versions	Dust and Splash Resistant
2000	EC5680-2.1		250 Ohms to 1 Megohm ±20%	0.5 Watt @ 70° C	350V	−55° C to +125° C	1	0.625 (15,88) Square	Sealed for Board Washing

[1] All depth dimensions are maximum.

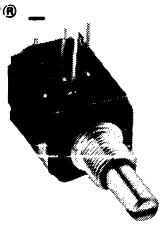
Series 70 MOD POT® – Modular design innovated by Allen-Bradley offers almost unlimited combinations: single, dual, triple or quadruple sections. Options include PC or solder lug terminals, variety of switches, vernier drives, concentric shafts, hot-molded composition, cermet or conductive plastic resistance elements.



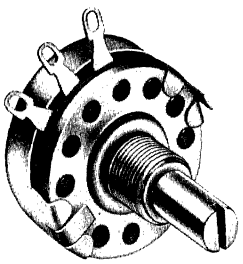
Series 72 MOD POT® – Similar to Series 70, except the bushing and shaft are non-metallic. Available in single or dual combination only.



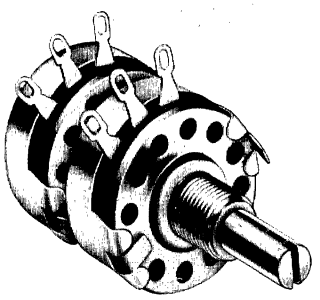
Series 73 MOD POT® – Similar to Series 70, except the bushing is of a more economical design.



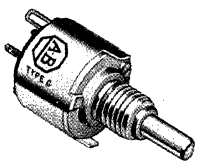
Type J (RV4) — Standard of the industry for quality. Hot-molded composition, 50 ohms to 5 megs, ±10% and ±20% (special values to 1000 megs available), 2.25W at 70° C, single, dual, triple sections available. Switch for single or dual sections.



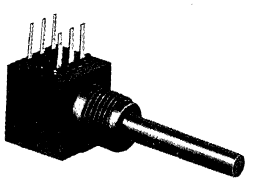
Type EJ — Extra long life version of the Type J with rotational life exceeding one million rotations, single or dual configurations. Slip clutch available.



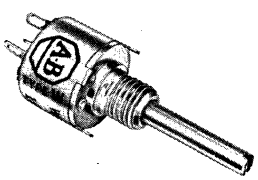
Type G (RV6) – Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70° C, single section available with or without SPST switch.



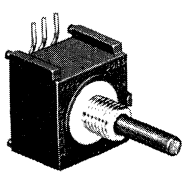
Type M — Miniature conductive plastic. 100 ohms to 1 meg., ±20%, 0.1W at 40° C, single and dual sections available. Switches optional. 5 terminal options. Non-metallic case, bushing and shaft.



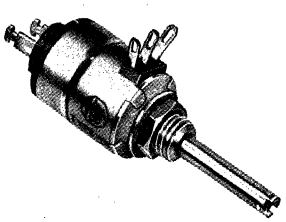
Type W (RV6) – Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70° C, single section.



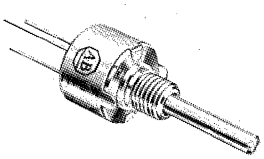
Type 2000 — Designed cost-effective in conductive plastic. 250 ohms to 1 meg, ±20%, 0.5W at 70°C single section. Terminal options available. Non-metallic case and shaft. Choice of bushing.



Type WR — Radial-lead version of Type W. Available with or without switch. Switch versions offer contacts that close at start of clockwise rotation (TYPE WRS) or with switch with contacts that close at start of counter-clockwise rotation (TYPE WRH).



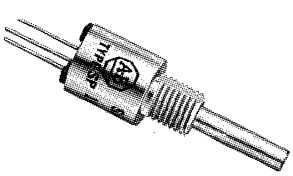
Type WP — Pin-terminal version of Type W. Suited for printed circuit board mounting.

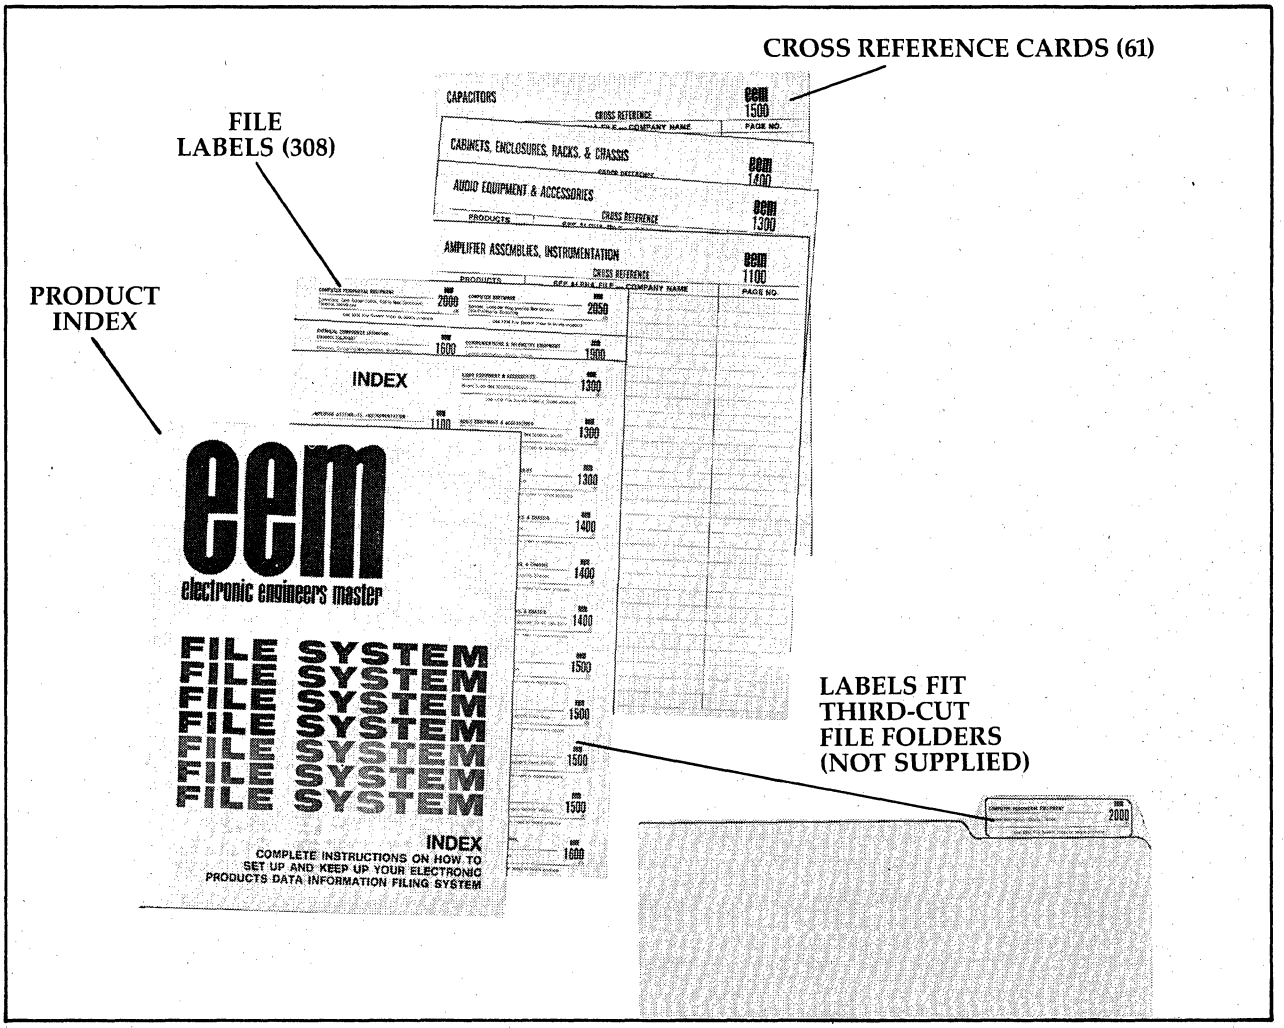


Standard options for most types include linear and non-linear tapers, a variety of shafts, bushings, shaft endings, shaft lengths, and hardware.

Types J and the multi-section MOD POT® with composition tracks are well suited for attenuator applications.

Type SP — Cermet, 50 ohms to 1 meg, ±10%, 1.0W at 70° C, single section. Only 3/8 inch diameter.





WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

MFT® THE FUTURE IN TRIMMER/RESISTOR TECHNOLOGY

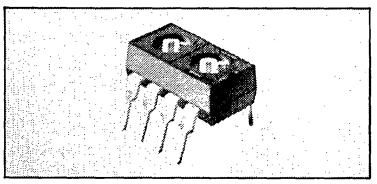
Bourns has combined the worlds best technologies used in producing cermet trimmers and cermet fixed resistor networks.

This innovative packaging concept results in improved circuit performance, reduced design time, increased reliability, and better temperature tracking than discrete equivalents.

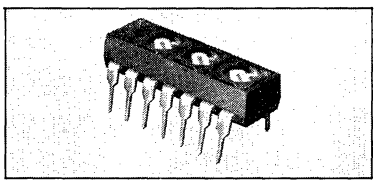
MFT trimmers/resistors are compatible with automatic test and insertion equipment, and their sealed construction enables them to be mounted prior to board washing.

Standard Models Available

7102B
two single turn trimmers



7103C
three single turn trimmers



7104D
four single turn trimmers

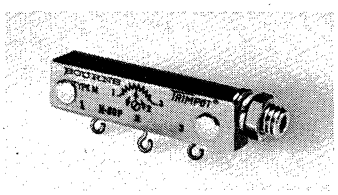
PANEL MOUNTING DETAILS

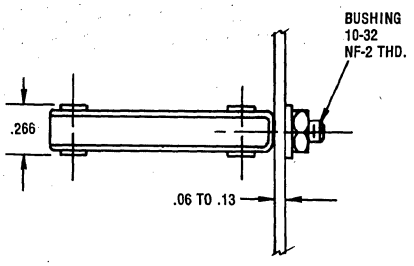
Many Bourns models are available for panel mount application (see following details for models). To order units with the hardware attached, simply select the part number you want from the standard part number table on the individual catalog sheet and add M after the part number. For the model 3006 a Z should be used instead of an M.

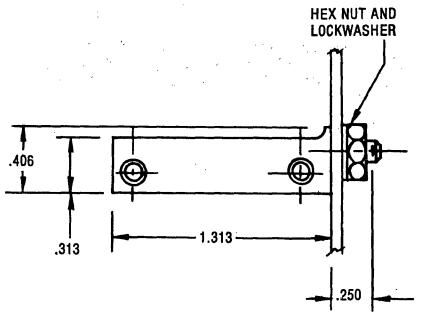
EXAMPLES 3057L-1-102M
3059J-1-503M
3292L-1-105M
3006P-1-502Z

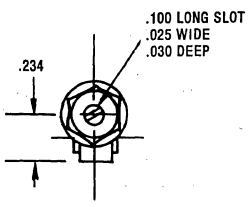


3059J-1-(RC)M

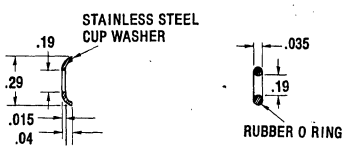
MODEL 3057 AND 3059







FOR PANEL SEAL ORDER H-82 AND POSITION ON BUSHING BEHIND PANEL



NOTES:
1. Provided with lockwasher and mounting nut.
2. Recommended panel hole. #10 drill (.194).

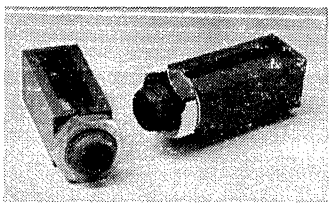
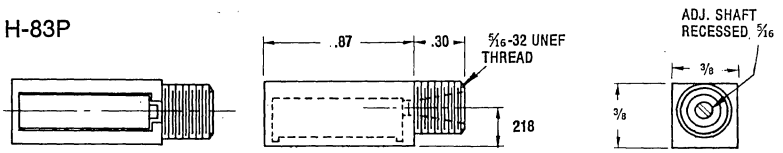
TWX 910-332-1252, CBL BOURNSINC, TLX 676-423 • TEL 714 781-5050

PANEL MOUNTING DETAILS



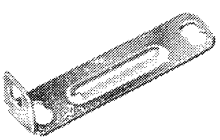
You can provide your own panel mount assembly by using a standard Model 3005 or 3006 with the H-83P Adaptor — simply select the part number you want and snap fit the unit in the plastic case. The H-83P with lockwasher and mounting nut is available in 50-piece lots.

H-83P

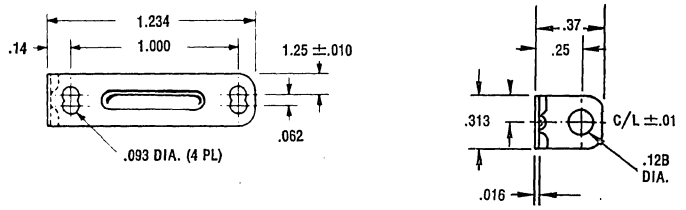


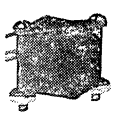
MOUNTING HARDWARE

The following hardware is available for special mounting applications.

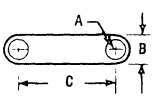


H-11E END BRACKET FOR MODELS 3057 AND 3059

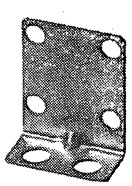




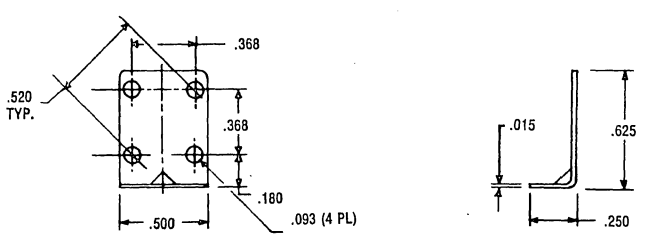
STACKING STRAPS
H-25 FOR MODELS 3250 AND 3252
H-28 FOR MODELS 3290 AND 3292

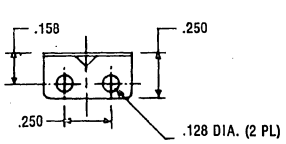


DIM.	H-25	H-28
A	.093	.070
B	.143	.125
C	.520	.419



H-26 SIDE BRACKET FOR MODELS 3250 AND 3252





NOTE: All mounting hardware is stainless steel.

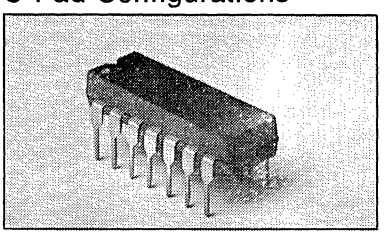
BOURNS® ATTENUATORS

Bourns offers an extensive line of fixed, variable and switchable attenuators. All Bourns attenuators are available in both standard and custom configurations. Our Engineering Departments can custom design special attenuators for your specified applications.

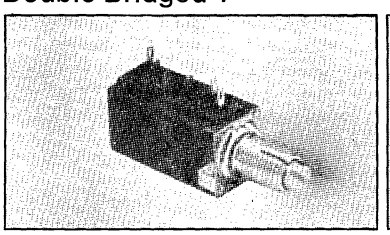
Fixed Attenuators

Models
4114R-033
4114R-033-001
4114R-033-002
O-Pad Configurations



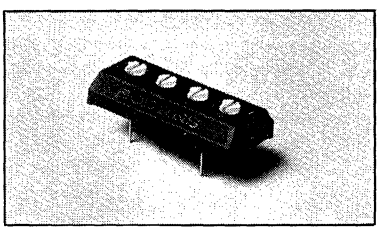
Variable Attenuators

Models 81/82
Straight T-Pad
Bridged T
Bridged H or
Double Bridged T



Switchable Attenuators

Model
3100
T and O-Pad
Configurations



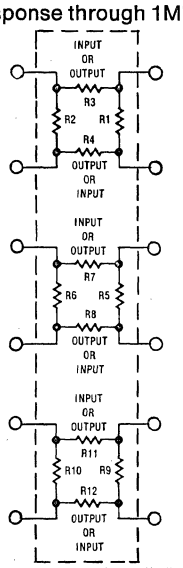
NETWORKS DIVISION

Pre-assembled 14 pin DIP'S contain balanced or unbalanced attenuator pads. Available in 1/2 dB steps to 36 dB

Features include temperature coefficient of ±100 ppm/°C operating temperature −65°C to 125°C

Attenuation tolerance (dB) of ±1%

Flat response through 1MHz



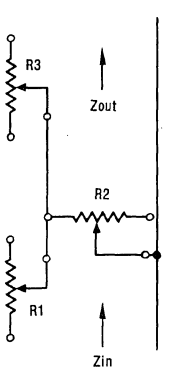
O-Pad

PRECISIONS CONTROLS DIVISION

Thick film cermet elements achieve infinite resolutions and setting stability

Straight T, bridged T and double bridged T-Pad are available with 10% or 20% impedance tolerances

Minimum attenuation loss 0.2 dB all models with flat response through complete audio range



Straight T-Pad

TRIMPOT DIVISION

Bourns Model 3100 switchable attenuators incorporate both switching and attenuator network functions in a single integrated package resulting in reduced component count, assembly costs and PC board space

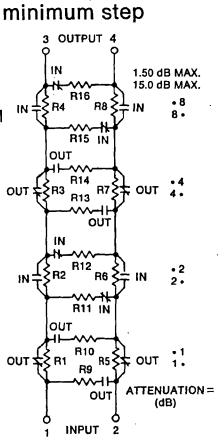
Input impedance 600Ω ±2% or 75Ω ±5.0%
Balanced and Unbalanced

Power rating + 15dBm (Max.)

Attenuator Range: 0-1.5, 0-15, and 0-24 dB

Binary Weighted Switching, 0.1 dB minimum step

Consult factory for additional types and values



O-Pad

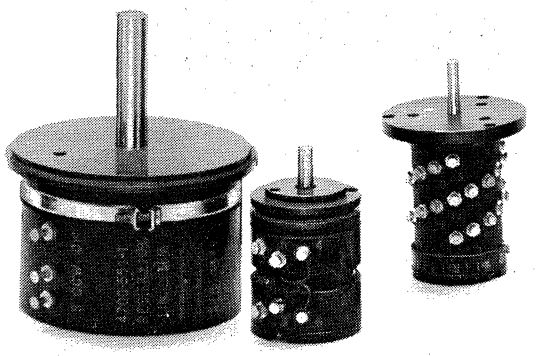
SYSTRON DONNER
A THORN EMI company

DUNCAN ELECTRONICS DIVISION

A complete selection of standard products is available for cost-effective solutions to a wide variety of potentiometric functions. DUNCAN ELECTRONICS is also prepared to respond to special requirements, and offers a host of new, innovative alternatives to position sensing applications.



PRECISION POTENTIOMETERS

A COMPLETE SELECTION OF WIREWOUND, HYBRID, AND CONDUCTIVE PLASTIC UNITS, INCLUDING COMMERCIAL AND INDUSTRIAL MODELS AND SPECIAL CAPABILITIES.

COMPARISON OF RESISTIVE CHARACTERISTICS

PARAMETER	RESISTIVE TECHNOLOGY		
	Wirewound	Hybrid	Conductive Plastic
Resistance Range	Full Range	Limited Range	Full Range
Std. Resistance Tolerance	± 3%	± 5%	± 10%
Effective Travel Range	Up To 10-Turns	Up To 10-Turns	360° Maximum
Temp. Coefficient of Resistance	± 20 PPM/°C	± 70 PPM/°C	– 300 PPM/°C
Power Dissipation	High	High	Moderate
Resolution	Finite	Infinite	Infinite
Adjustability/Setability	Fair	Good	Excellent
Linearity/Conformity	Very Good	Good	Excellent
Contact Resistance	Low	High	Moderately High
Rotational Life (Rev.)	2×10^8	10×10^6	50×10^6
Moisture Stability	Excellent	Good	Fair
Non-Linear Functions	Excellent	Good	Excellent
Rheostat Applications	Excellent	Poor	Fair
AC Circuit Applications	Poor	Fair	Excellent
Relative Cost	Low	Medium	High

POSITION SENSING PRODUCTS

SLIDELINE® CONTROLS

FOR INSTRUMENTATION AND AUDIO/BROADCAST APPLICATIONS:

Duncan 400 Slideline® Potentiometers provide an ideal, human-factored solution for instrumentation and audio/broadcast controls, combining unusually accurate electrical characteristics with a wide variety of output options, fingertip controls, and faceplate alternatives to meet exacting customer applications requirements.

Ideally suited for medical and process control equipment, or test/measurement apparatus, the 400 is capable of providing specific packaging or electrical characteristics without the special costs you might expect. The 400 can change its face and provide excellent accuracy in single or dual element configurations for the type of control you seek. Units are available with two individual wipers generating independent outputs for establishing high/low limits in monitoring instruments. For specs, infinite resolution, virtually noise-free operation and a reputation for failure-free performance (rated for 5 million traverses without degradation), is coupled with a 600Ω to 250KΩ resistance range (±20%; ±10% available) and linearities from ±2% to ±0.1%. Stroke is 2¾" or 4¼".

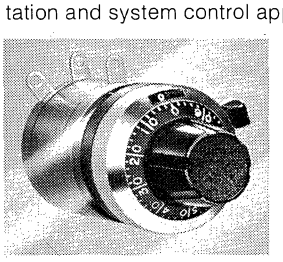
A normally open SPST or DPST "cue" switch function is available closing at the end of travel. As a result, valuable instrument panel space is saved and multiple functions provided.

TURNS-COUNTING DIALS

Duncan Turns-Counting Dials are especially designed to provide accurate, highly visible position readouts of multi-turn devices.

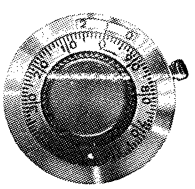
PERFECTLY DESIGNED FOR COMBINATIONS

Duncan Turns-Counting Dials are ideal for use with any Duncan Multi-turn Potentiometer, particularly the ⅞" dia., 10-turn 3250 series. Such combinations are suited for cost-effective instrumentation and system control applications.

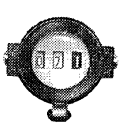


3250 10-turn/Model 62 Dial Combination

Model 62, 15-turn



Model 82, 20-turn



Model 71, Digital 10-turn

Model 76, Clockface 10-turn

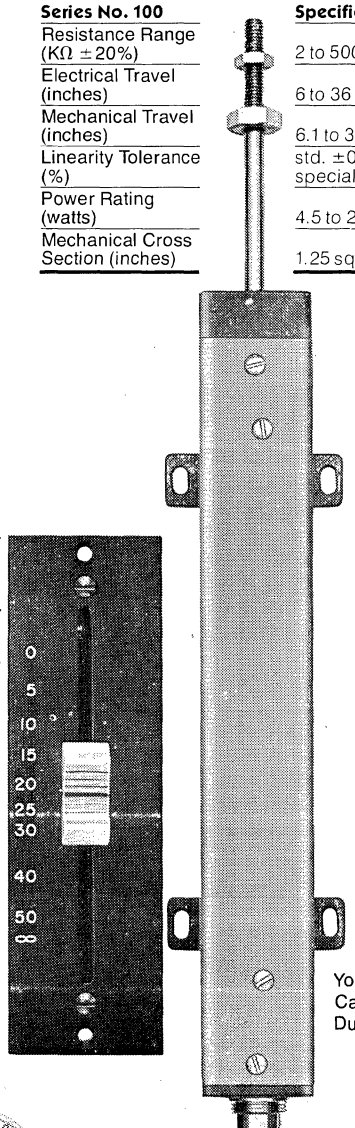
RECTILINEAR/*SERIES 100*

ACCURATE FEEDBACK AND INTERFACING CAPABILITIES IN A NEW SERIES

The new Duncan Series 100 Rectilinear Control is available in 7 different sizes.

Completely enclosed, the 100 offers an impressive array of linear motion/rectilinear capabilities and gives you a choice of 3 different interface connectors, linear and non-linear taper, and switch functions at the end of mechanical travel. They're perfect for use under unusual industrial or environmental conditions.

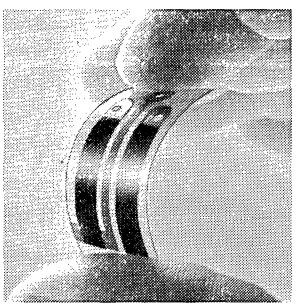
Series No. 100	Specifications
Resistance Range (KΩ ±20%)	2 to 500
Electrical Travel (inches)	6 to 36
Mechanical Travel (inches)	6.1 to 36.1
Linearity Tolerance (%)	std. ±0.5% special ±0.1%
Power Rating (watts)	4.5 to 27
Mechanical Cross Section (inches)	1.25 sq.



RESISTIVE ELEMENTS

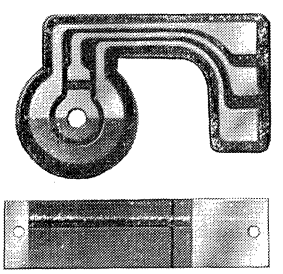
A STANDARD PRODUCT APPROACH TO LOW-COST POSITION SENSING

Series 98E Elements are currently operating in hundreds of different systems. You'll find them in everything from airborne applications and instrumentation, to consumer appliances and automotive electronics.



If you want to design your own element, we'll help you. Before your first production quantity is required, you will have the satisfaction of testing and approving a design in ample time to meet your planned requirements.

TYPICAL SPECIFICATION RANGES	
Electrical Travel	up to 36" (900mm)
Resistance Range (Ω per square)	50 to 20K ±20%/±10%
Linearity	to ±0.05%
Power Rating	3 watts/square



Although the 98E Element is priced right for use in commercial products or industrial controls, it meets high standards of reliability, anti-shock and low noise.

48-PAGE DESIGN HANDBOOK/CATALOG

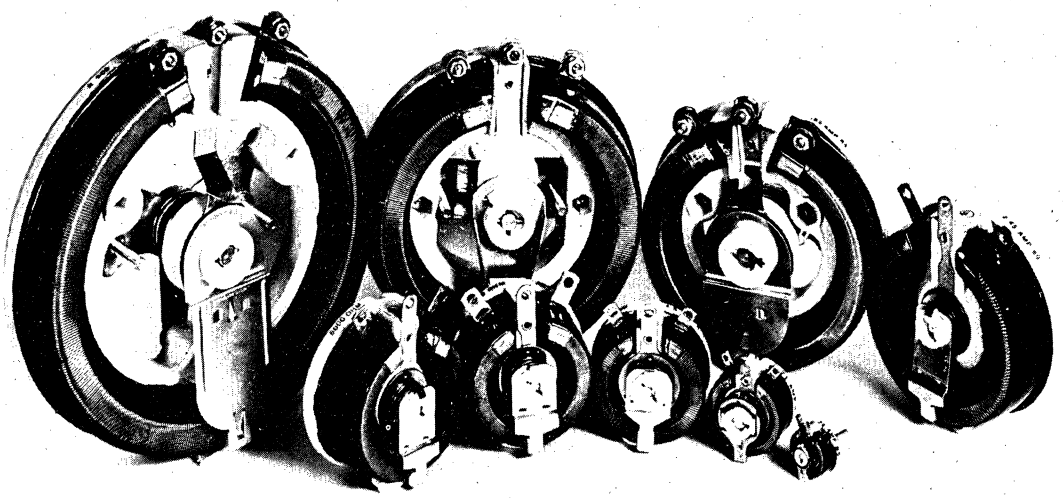
POWER RHEOSTATS

MEET THE MEMCOR FAMILY OF HIGH QUALITY WIRE-WOUND POWER RHEOSTATS



All MEMCOR Power Rheostats are vitreous enamel coated. The core and base are bonded together with vitreous enamel, thereby contributing markedly to the heat dissipation.

Standard tolerance: ±10%, ±5% available as a special.

TYPE	POWER (Watts)	RESISTANCE RANGE	DIAMETER	WEIGHT
R12½	12½ Watt	1 - 5000 Ohms	⅞"	.035 Lbs.
R25	25 Watt	1 - 5000 Ohms	1 9/16"	0.23 Lbs.
R50	50 Watt	0.5 - 10,000 Ohms	2 15/16"	0.45 Lbs.
R75	75 Watt	0.5 - 10,000 Ohms	2¾"	0.60 Lbs.
R100	100 Watt	0.5 - 10,000 Ohms	3⅛"	0.72 Lbs.
R150	150 Watt	0.5 - 10,000 Ohms	4"	1.50 Lbs.
R225	225 Watt	1 - 2500 Ohms	5"	2.18 Lbs.
R300	300 Watt	1 - 2500 Ohms	6"	3.0 Lbs.
R500	500 Watt	1 - 2500 Ohms	8"	3.75 Lbs.
R1000	1000 Watt	1 - 2000 Ohms	12"	10.0 Lbs.

Special Rheostats with Tapered Sections, Locking Devices, Off Positions, Tandem Mountings, Special Shafts on Bushing, and many other variations can be supplied.

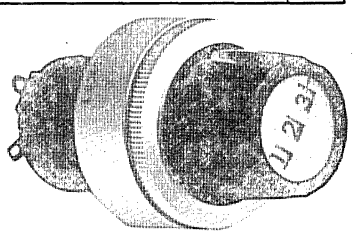
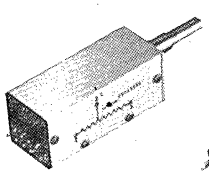
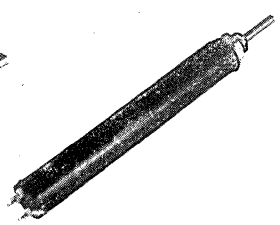
COMBO® 3

Pre-assembled and phased to ±.25% absolute readout accuracy. Mounts in a 1.187" dia. panel hole. Available with seven potentiometers above.



LINEAR MOTION

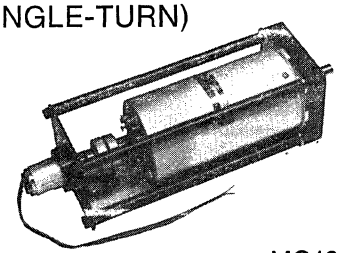




- Full line of precision linear motion potentiometers. Strokes from 0.433" to 40". Available in wirewound, conductive plastic or hybrid elements. Please contact ETI for complete specifications.

MOTOR CONTROLLED POTENTIOMETERS

(MULTI-TURN AND SINGLE-TURN)



MC46-2

ETI offers for the first time a complete line of motor-controlled potentiometers with motor operating currents low enough to respond accurately from operational amplifier outputs.

All ETI rotary potentiometers may be motorized for your applications.

PRECISION POTENTIOMETER, 2,000,000 TURNS LIFE.

GEAR RATIOS: 41:1 TO 235,000:1 WITH DUAL ADJUSTABLE CLUTCHING COUPLER.

PRECISION FRACTIONAL H/P MOTORS IN 6 OR 12 VDC, RPM'S FROM 6,000 to 20,000. A.C. MOTORPOTS NOW AVAILABLE.

See Section 3500, Motors and Drives for full information.

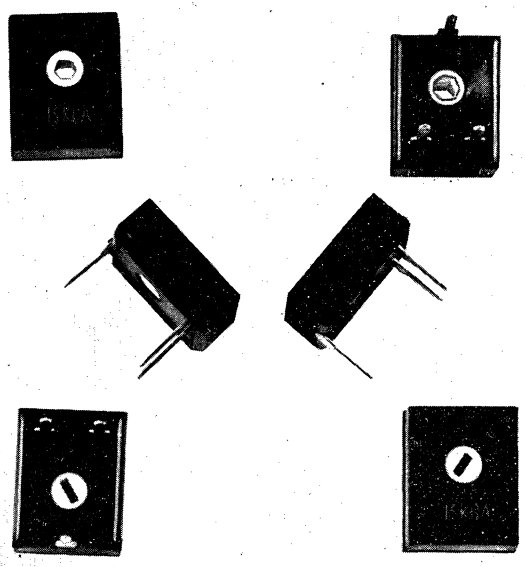
POTENTIOMETERS



Color of protecting housing
PNZ type — black
PNKZ type — green
PNCZ type — red

For the requirements of modern electronic equipment ISKRA has designed a new series of trimmer potentiometers PNZ 10, which feature a number of improvements.
Some of them are:

△ Miniature rectangular design
△ Horizontal and vertical mounting
△ Three types of resistive layers:
carbon layer on phenolic
carbon layer on ceramic
cermet layer on ceramic
△ With hex slot suitable for automatic adjustment
△ Dual wiper design reduces contact resistance and electrical noise
△ Enclosed body protects against dust and short circuits
△ Non-inflammable plastic according to UL-94-VO

'POTS'

PNZ Series	Wattage	Resistance	T.C.
(Miniature and enclosed trimmer potentiometers)	.2W, .5W	25 ohms - 5 meg ohms	100 ppm/°C 2000 ppm/°C

PNZ Series available in Carbon on Phenolic, Carbon on Ceramic and Cermet Horizontal and vertical mount configurations (standard industry spacing) available with Screw Driver Slot, Hex Slot, Thumbwheel and Spindle Shift.

Open construction trimmers, from 8mm thru 18mm diameters available on order. Custom controls, slider and focus potentiometers also available.

Rated resistance range

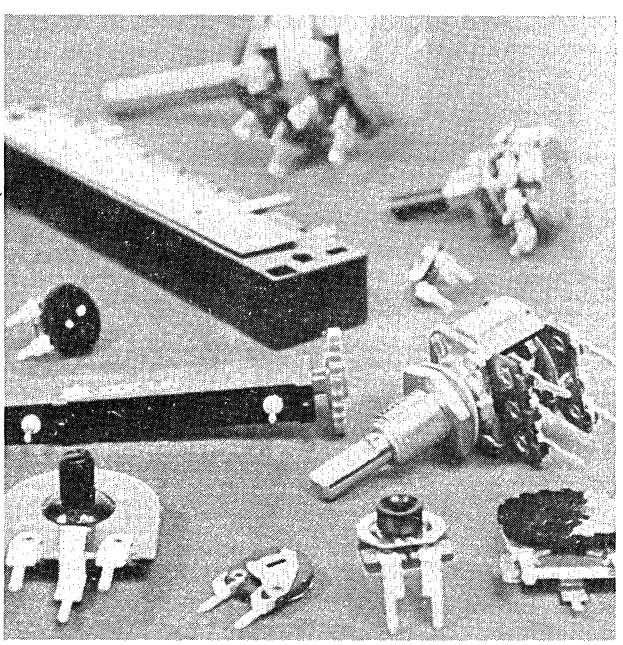
—	1 kΩ	100 kΩ	10 MΩ
25 Ω	2.5 kΩ	250 kΩ	—
50 Ω	5 kΩ	500 kΩ	—
100 Ω	10 kΩ	1 MΩ	—
250 Ω	25 kΩ	2.5 MΩ	—
500 Ω	50 kΩ	5 MΩ	—

CERAMIC BASED PRE-SET POTENTIOMETERS

With the development of modern electronics and miniaturization the technical needs have also increased and consequently pre-set potentiometrs have to be adapted accordingly. The main requirements are:

△ High electrical loading
△ Higher operating temperature
△ Climatic influences
△ Requirements according to long term stability

Pre-set potentiometers have been developed on alumina ceramics, open version. Several potentiometers are available with dust-proof casing.



ISKRA ELECTRONICS INC.

MAUREY INSTRUMENT CORP. Potentiometers

Rotary and Linear Motion Transducers

WIREWOUND These precision potentiometers were developed for military use over a period of 27 years. They are widely used in instrumentation and automation where precise electrical and mechanical requirements are specified. Low resistance tolerance and TCR; close electrical angle tolerance. Custom designs are available.

CONDUCTIVE PLASTIC Our raised molded track will withstand 200,000,000 cycles of high dynamic velocities (10″ per second). The infinite resolution and low noise make these units particularly suitable for servo feedback applications. 100 g shock, 100—20,000 Hz at 50 g. Impervious to most gases and oils.

HEAVY DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC HDL

WIREWOUND M2028 This transducer combines the inherent accuracy and reliability of a wirewound potentiometer with the physical ruggedness required in industrial applications. They are used with hydraulic and mechanical actuators to measure and control linear motion. The self-aligning spherical ball ends and MS connector simplifies installation. High duty bearings give the ¼ inch shaft stability in the extended position.

CONDUCTIVE PLASTIC P1991 Where severe environmental conditions exist as in mills, factories and power generating plants, this linear motion transducer is practically indestructible. The unit is impervious to dust, oil and moisture. The molded, raised conductive track and graphite composition contacts provide for years of maintenance free service. As with the M2028, the self-aligning spherical ball ends and MS connector allows for ease in installation.

LIGHT DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC

LDL

WIREWOUND (M-Series) These miniature transducers combine the best electrical characteristics in the smallest size at the lowest cost. The units were designed for use in laboratory test equipment, light industrial applications and automation where great accuracy of electrical output is essential. The spherical ball ends add flexibility to mounting. These wirewound, linear motion potentiometers will meet the requirement in the majority of applications.

CONDUCTIVE PLASTIC (P-Series) Where long life in a hostile environment is required, these linear motion transducers with molded, raised tracks and graphite composition contacts have no equal. They are practically impervious to dust, water and oil. The high contact pressure resists the effects of severe vibration and shock. The units are being used in factories and mills where maintenance-free operation is essential.

PRECISION CONDUCTIVE-PLASTIC SINGLE TURN POTENTIOMETERS

PST

These conductive plastic potentiometers have been specially designed for severe environmental conditions in mill-factory operations as well as in critical military applications. The molded, raised track maintains itself free from contamination of foreign particles, oil or water. The high gram pressure of the graphite composition contact on the raised track gives excellent resistance to contact bounce under punishing vibration or shock, as well as an exceptional rotational life. Such units are particularly suited for applications where trouble-free maintenance is required.

CERMET TRIMMER SPECIFICATIONS

Temperature Coefficient: ±100 ppm/°C, standard
Contact Resistance Variation (CRV): 3%
End Resistance: 1% maximum or 2Ω, whichever is greater.
Resolution: Essentially infinite.
Operating Range:
−25°C to +125°C for Models 8014, 8035, 8038.
−65°C to +150°C for Models 8024, 8026, 8050.
Torque: 3.8 inch-ounces maximum, depending on model.
Sealed to allow wave solder and immersion cleaning.
Stops: Clutch at both ends for multiturn; positive at both ends for single turn models.

DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

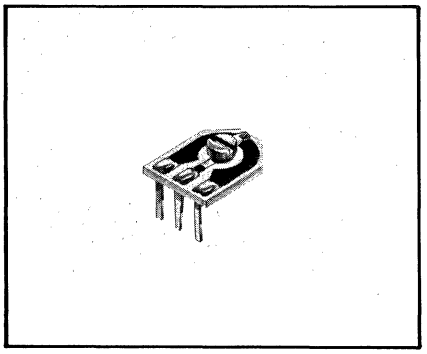
Mech.	260° ±10°	280° ±10°	260° ±10°	280° ±10°
Stop Strength:	13.9 oz.			

* 100 ohms available in RVA ** Derated to 0 watts at 125°C
*** Max working V varies with resistance value. Vmax = √ Resistance x Power



1/3 Watt, Cermet—RVS0707

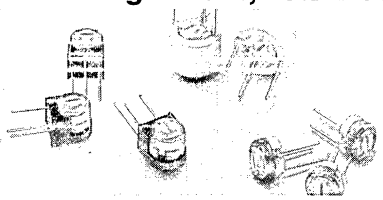
Resistance Range:	100 ohms to 1 Megohm
Tolerance:	±20%
Temperature Coefficient:	100ppm/°C
Residual Resistance:	100 to 500 ohms — 5 ohms max. Over 500 ohms — 1% max.
Taper:	Linear
Power Rating:	1/3W (at 70°C) Derated to 0 Watts at 125°C
Max. Working Voltage:	100 VDC
Torque:	.27 to 2.8 oz. in. (20 to 200 g cm)
Terminal Strength:	12.35 oz. (350 gr) when the force is applied in the direction of the axes of the terminal
Effective Rotation:	200° ±10°

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E. Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

sealed precision cermet trimming potentiometers—±100 ppm/°C

MURATA ERIE NORTH AMERICA, INC.

3321 Single Turn, 1/2 Watt



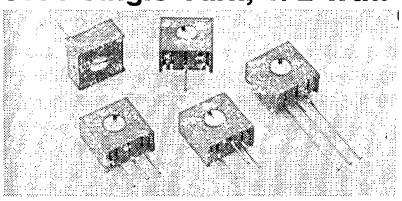
FEATURES

- Flame retardant rotor meets UL94V-0 requirements
- Extremely small size — .260″D. x .181″
- Sealed to withstand wave soldering and immersion cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±20%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +150°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +150°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3104 Single Turn, 1/2 Watt



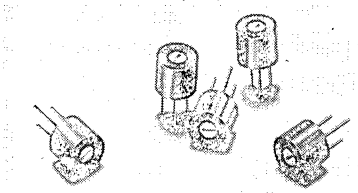
FEATURES

- Low cost
- ⅜″ square

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	2 ohms max.
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	1% or 1 ohm max. whichever is greater

1102, 4-Turn, 1/2 Watt



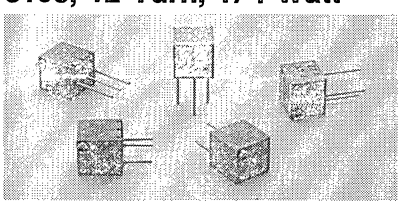
FEATURES

- Unique planetary drive provides the precise setting capability of a multi-turn unit in a small single-turn package
- Just .299″D x .260″
- Sealed to withstand wave soldering and immersion cleaning process

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3103, 12-Turn, 1/4 Watt



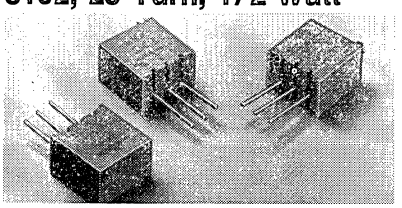
FEATURES

- ¼″ square
- Sealed to MIL-R-22097 standards

SPECIFICATIONS

Resistance Range	10 ohms to 1 Megohm
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.25W at 70°C. Derated to 0W at +125°C
Working Voltage	200 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3102, 25-Turn, 1/2 Watt



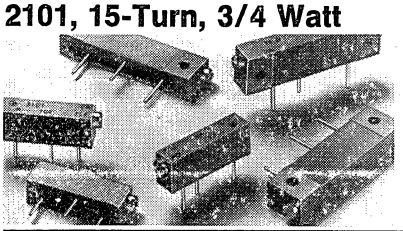
FEATURES

- Small size — .374″ x .394″ x .240″
- Sealed to MIL-R-22097 standards. Will withstand industrial cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

2101, 15-Turn, 3/4 Watt



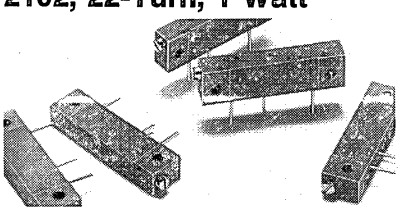
FEATURES

- Small size — .181″ x .252″ x .752″ for close board spacing
- Sealed to MIL-R-22097 standards. Will withstand industrial cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	3% or 1 ohm max. whichever is greater
Power Rating	0.75W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

2102, 22-Turn, 1 Watt



FEATURES

- 22 turn mechanism provides extremely fine adjustment capability
- High power dissipation: 1.0W at 70°C
- Sealed to withstand wave soldering and immersion cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	1W at 70°C. Derated to 0W at +150°C
Max. Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +150°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

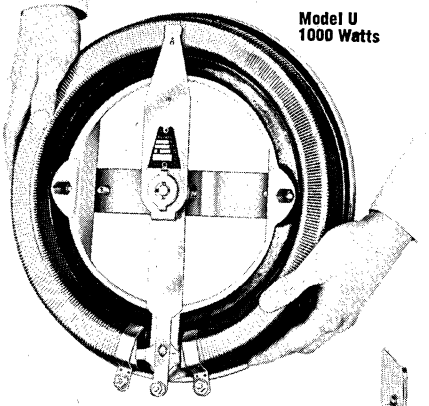
OHMITE® vitreous enameled rheostats (potentiometers)

Now, Ohmite offers TWELVE sizes in its line of famous rheostats.

In all Ohmite rheostats, the resistance wire is wound on a solid ceramic core. The turns are locked in place with tough, protective vitreous enamel or Ohmicone® silicone ceramic. Pivoted, universal action mounting of the brush, assures perfect contact. Metal-graphite contact brushes, varied to fit current and resistance, insure good contact with negligible wear of the wire. Terminals at each end of the winding permit connection of the unit as a potentiometer.

NOW, FOR ITS RATING, INDUSTRY'S SMALLEST RHEOSTAT!

Model C
7½ Watts



Model U

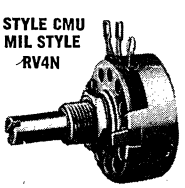
OHMITE® molded composition potentiometers

STYLE CMU
MIL STYLE RV4N



Ohmite molded composition potentiometers (Type AB) provide high quality and dependable performance.

Because the resistance element is a thick, solid-molded ring, longer life and smoother operation are obtained. This is due also to the molded composition contact. Units are dust and splash proof, fungus and corrosion resistant and meet the requirements of military specification MIL-R-94.

STOCK "POTS" — MIL Units are stamped with MIL and Commercial Designations.

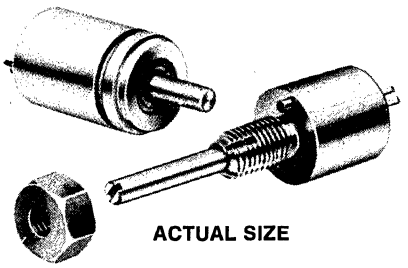
SAMARIUS INC.

300 SEYMOUR AVENUE, DERBY, CONN. 06418 (203) 735-7405 • TWX: 710-451-2495

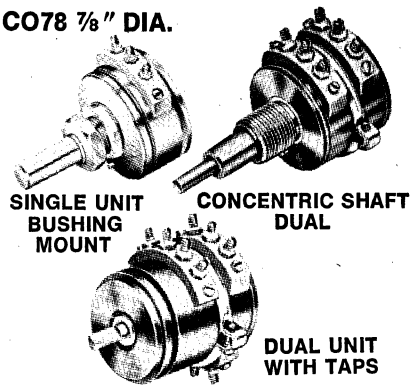
PRECISION POTENTIOMETERS

C-050 ½" DIA.

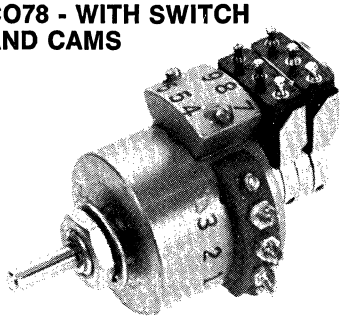


Available in resistance values to 500K. Dual Gang Units available both Bushing & Servo Mt.

CO78 ⅞" DIA.

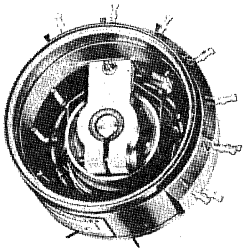


CO78 - WITH SWITCH AND CAMS



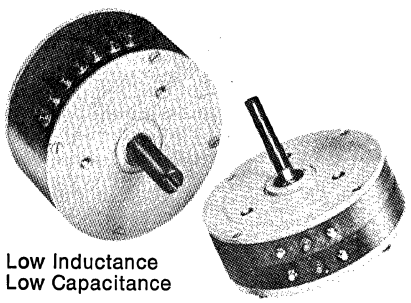
Designed for aircraft and commercial applications.

BC200 - C200P 2" DIA.



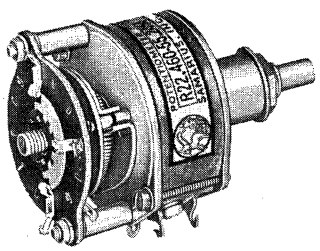
Most versatile unit- all resistance values. Taps economically supplied. Gangable and available in both Bushing & Servo Mount.

M300, M301, M400 INSTRUMENT POTENTIOMETERS



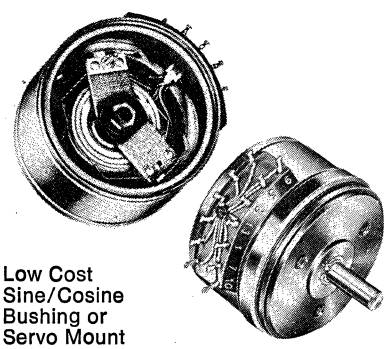
Low Inductance
Low Capacitance

MODEL L140 LOOP CONTROL



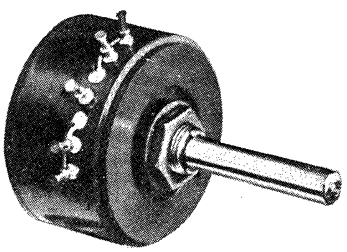
Spring return to center with or without switch and center tap. Used in Satellite and Radar Antennas. Also Medical, Robot and Comparators.

BC200 - C200P SINE/COSINE



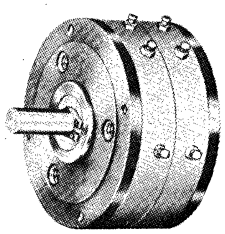
Low Cost
Sine/Cosine
Bushing or
Servo Mount

M158 - CP158 1⅝"



Low Cost Industrial Wirewound & Conductive Plastic Units

SERIES HP-200, HP-300, HP-500 2", 3", 5" HIGH RESOLUTION



Ideal for Tight Linearity Long Elect Angles

HIGH PRECISION POTENTIOMETER AND RESISTOR ASSEMBLY

Samarius, Inc. furnish their clients with a custom winding service for wire wound potentiometer elements in card and mandrel types. Linear or functional requirements are achieved through cooperative R & D with customers. Card profiles are ground with exact duplication from master templates on our own engineered and built machines to tolerances to meet all specifications. We can supply card windings for ¼" miniature potentiometers to cards 12 feet long and 4 inches wide. Mandrel windings are available up to 16 feet long in any type of wire needed. Over 30 years' experience in supplying high precision potentiometer windings to the field. Call on our engineering staff for their help in solving your winding or potentiometer problems.

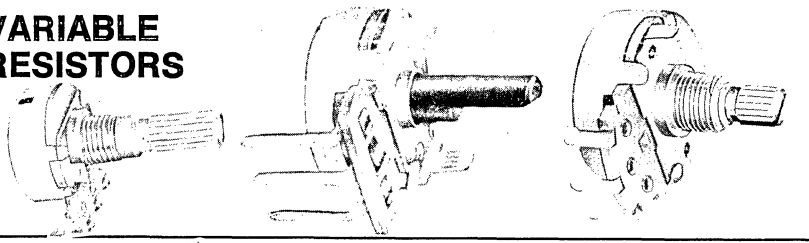
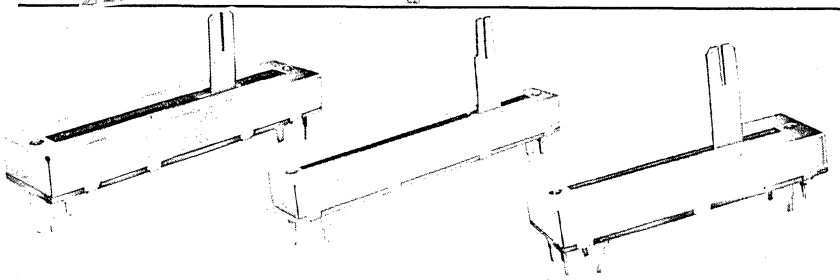
VARIABLE RESISTORS



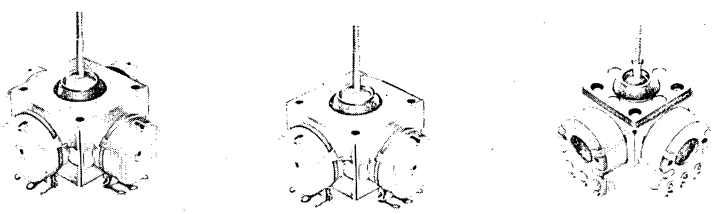
ROTARY

Angle of Rotation Ranges: 260° ±5° through 300° ±5°
Resistance Range: 500Ω through 2MΩ
Power Rating: .05W through .25W
Voltage Rating: 150V through 500V
Torque: 200 through 350g—cm
For Switch, Gang Error and Electrical Tap Specifications please consult Shogyo directly.



SLIDE

Travel: 20 ±0.5(mm) through 60 ±0.5(mm)
Mounting Pitch: 65(mm) — 31 ±0.3(mm) through 85(mm)
Resistance Range: 500Ω — 1MΩ, 5KΩ through 1MΩ
Power Rating: 0.1W through 0.5W
Voltage Rating: 150V through 500V
Sliding Force: 50 — 350g
Single and Double Types available.



SEMI-FIXED

Resistance Range: 100Ω through 2KΩ
Resistance Tolerance: ±20%
Taper: Linear
Rated Power: 0.1W
Maximum Operating Voltage: 100V
Rotating Angle: 260 ±15%
Rotating Torque: 40 — 250g—cm
Rotating Life: Maximum 10% resistance change @ 50 rotations
Temperature Characteristic: +5 — 20% resistance change after 5 hours at 70°C
Load Characteristic: ±5% resistance change after 5 hours @ normal temperature
Moisture Characteristic: 7 — 15% resistance change after 5 hours at 95% humidity, 40°C

TYPICAL SWITCH APPLICATIONS

● Logic switching. ● Internal switching device for optional equipment add-ons. ● Test point switching. ● Adapting main-frame computers to peripheral equipment. ● Standardizing printed circuit boards. ● Selecting operational voltages. ● Selecting calibration resistors.

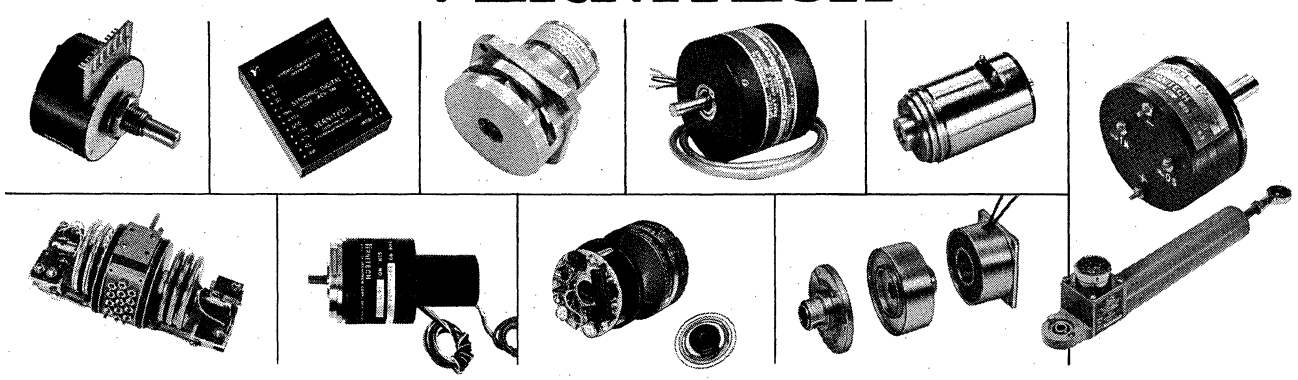
If you want to move it, control it, sense it, stop it, or scan it, call Vernitech.

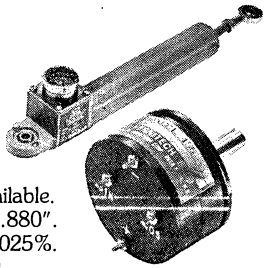
That is, if you're looking for instrument motors, optical and contacting shaft angle encoders, rotary and linear potentiometers, potentiometric pressure transducers, industrial precision brakes or clutches, or laser scanning motors, we'll probably have just what you're looking for. Just look on the opposite page. And if you *don't* find what you want, call Vernitech, give us the particulars, and we'll make it for you.

VERNITECH



VERNITECH, a division of Vernitron Corp., 300 Marcus Blvd., Deer Park, NY 11729 • 516-586-5100 • TWX 510-227-6089

POTENTIOMETERS



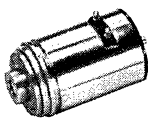
employing Vernitech's unique conductive film and precious metal wipers...respond to wiper motions as small as .000005".

Rotary Single Turn
Linear, non-linear, sine/cosine available.
Sizes 0.5", L 0.5" to Dia 5.0", L 1.880".
Linearity or conformity ±2% to 0.025%.
Resistance range 1KΩ to −250KΩ.

Rotary Multi-Turn
10 to 100 turns available.
Sizes Dia 0.5", L 1.5" to Dia 2.0", L 2.625".
Linearity or conformity ±0.5% to 0.015%.
Resistance range 1KΩ to 500KΩ.

Linear Motion
Electrical stroke lengths 1" to 60".
Linearity or conformity ±0.2% to 0.01%.
Resistance range 250Ω/in to 250KΩ/in.

CLUTCHES AND BRAKES (electromagnetic)



hundreds of models and sizes available from stock.

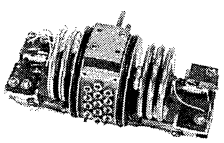
Precision Instrument Type
Sizes 5, 8, 11, 13, 15, and 18.
Standard length and wafer types. Spring and magnetic.
Meet MIL-E-5272C. Zero backlash.
Torque 5 to 150 oz. in. Response time 5 to 142 ms.

Industrial Types — open frame
Sizes 8, 12, 17, 22, 26. Torque to 75 in. lb.
Response time 6-30 ms at rated voltage.

Industrial Types — enclosed frame
Hybrid or special units designed for particular applications when MIL-SPECS and close tolerances are not essential, but where having a complete "self-contained" unit is desirable: cassette tape decks, analog devices actuators, etc.

Fail Safe
Braking action occurs 10 ms after coil is de-energized or power fails. Sizes 8, 17, 30, and 45.
Torque up to 50 in. lb. Zero backlash. Adjustable to compensate for wear.

PRESSURE TRANSDUCERS potentiometer type,



featuring infinite resolution, long life, and high reliability through the use of conductive film resistance elements, multiple wipers, and direct coupling of pressure sensing element to potentiometer wipers.

Pressure ranges from 0.1 to 10,000 psi in gage, absolute and differential types. Also available with high overpressure capability.

Linearity to ±0.3%. Air speed, altitude and low cost types available.

VERNITECH

MOTORS

Over 1500 Standard Designs or Custom Designed to your requirements.

Synchronous — for laser scanning
Sizes 5, 8, 11, 15, 18, 20, 25, 35.
Speeds 100 to 48,000 rpm.
5 through 1600 Hz. 2, 4, 8, 12 poles.

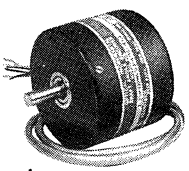
Servo
Viscous damped — sizes 8, 10, 11, 15, 18.
Speeds 3000 to 10,000 rpm.
Inertially damped — sizes 8, 11, 15, 18.
Speeds 3000 to 9500 rpm.

Stepper
Sizes 5, 8, 11, 15. Stepping angles 7.5°, 15°, 45°, 90°.
Stepping rates 100, 110, 125, 130, 175, 180, 225, 240, 260, 400, 725, 800, 1000 pps.

Precision Motor Generators Sizes 8, 10, 11, 15, 18, 23.

Integrating and Computer Motor Tachometers
Sizes 8, 10, 11, 15, 18, 23.

SHAFT ANGLE ENCODERS



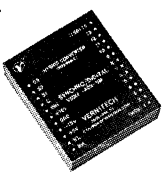
featuring precision chrome on glass discs for highest accuracy.

Optical Incremental
VOE 11 — Dia. 1.062", L. 1.80". To 1024 pulses
VOE 015 — Dia. 1.510", L. 0.88". To 1024 pulses (modular)
VOE M15 "Dial Coder" — panel mounted, 1.500" dia., L. 1.08" 127-256 pulses
VOE 023 — Dia. 2.25", L. 80". To 1250 pulses (modular)
VOE 23 — Dia. 2.250", L. 1.875". To 1250 pulses (available sealed)
VOE L23 "Thrift-Line" Dia. 2.250" L. 1.875". To 600 pulses
VOE 25 — Dia. 2.500", L. 2.500". To 3000 pulses (available sealed)

Optical Absolute
VOE 23: Binary, Gray or BCD to 512 counts per turn. Counting speed: 3000 rpm.
VOE 30: Single or multi-turn; Binary, Gray or BCD. To 1024 counts per turn. Max count (2^{19}) in 512 turns. Counting Speed: 30KHz.

Contacting Absolute
Sizes 11, 18, 23, & 31. Binary, Gray, and BCD. Single or multi-turn. Max count (2^{19}) in 2048 turns. 64 to 1024 counts per turn. Operating speed 200 rpm max.

SYNCHRO CONVERTER MODULES



Tracking Synchro-to-Digital and Resolver-to-Digital Converters
Economy Series VSD/VRD. Precision Series VSDH/VRDH
Compact, solid state, high performance converters employing type 11 servo loops for lag free tracking at rates to 3600°/sec. Resolution 10 bits, 12 bits, or 14 bits.

Digital-to-Synchro and Digital-to-Resolver Converters Series VDS/VDR:Accept shaft angle data in digital form for conversion to analog at accuracies up to ±4′.

Tracking Synchro-to-Linear DC Converter Module
Series VSDCH/VRDCH:Accept 3-wire synchro or 4-wire resolver input data, convert it to DC analog voltage proportional to synchro angle of input. Accuracy ±6′ (typ.).

Tracking Angle Position Indicator
VNST-104: Tracking Synchro-to-Digital Converter, can also be used as a control element. Four decade 0.8" red LED display. Display accuracy ±6′ arc (typical). Tracking rate 3600°/sec max. Parallel binary or BDC output. Self contained line operated power supply.

Custom designs available to your specifications.

170 SERIES

1/4" Round Cermet
Single-Turn Trimmer Potentiometers

CIRCUITRIM®

SPECIFICATIONS

ELECTRICAL

Power rating: 0.5W @ 85°C (300V max.)

Standard resistance range: 10Ω to 2 MΩ

Resistance tolerance: ±10% 100Ω to 2MΩ (±20% below 100Ω)

Temperature coefficient: ±100ppm/°C max. (±50ppm/°C available—consult factory)

Contact resistance variation: 3Ω or 3% (W.I.G.)

End resistance: 2Ω max. or 2% (W.I.G.)

Dielectric strength: 400VAC

Insulation resistance: 100MΩ

Absolute minimum resistance: 2Ω or 1% (W.I.G.)

MECHANICAL

Operating temperature range: −55° to +150°C

Total adjustment: 280° nominal

Operating torque: 5.0 oz.—in. max.

Mechanical stops: Solid

ENVIRONMENTAL

Models 170 and 171 meet, or exceed, all of the environmental and life requirements of MIL-R-22097, Characteristic F.

VRN

780 SERIES

3/8" Square Cermet Single-Turn Trimmer Potentiometers

CIRCUITRIM®

SPECIFICATIONS

ELECTRICAL

Power rating: 0.5W @ 85°C (300V max.)
Standard resistance range: 10Ω to 2MΩ
Resistance tolerance:
±10% 100Ω to 2MΩ ±20% below 100Ω
Temperature coefficient:
±100ppm/°C max. std.
(±50ppm/°C available)
Contact resistance variation:
3Ω or 3% (W.I.G.)
End resistance: 2Ω or 2% (W.I.G.)
Dielectric strength: 900VAC
Insulation resistance: 1000MΩ
Absolute minimum resistance: 2Ω max.

MECHANICAL

Operating temperature range:
−55° to +150°C
Total adjustment: 280° nominal
Operating torque: 4.0 oz.—in. max.
Mechanical stops: Solid

ENVIRONMENTAL

Meets or exceeds all of the environmental and life requirements of MIL-R-22097, Characteristic F.

VRN

Precision Potentiometers

More than 30 years of experience have gone into the design and manufacture of VRN precision potentiometers. Our continued research and development into material technology and stringent quality control standards enable us to produce a superior product at lowest cost.

The wide selection of standard units offered will enable design engineers to select a precision potentiometer to meet specific application needs, as well as tight-tolerance packaging requirements.

Shaft, bushing and electrical tolerances are easily modified to meet non-standard specifications.

If, however, you are unable to find a standard precision potentiometer that meets your exact needs, please contact the factory. VRN offers the widest choice of custom designs and turn packages available . . . chances are we already have a custom design to meet your needs.

Cross-Reference Guide for Trimmer Potentiometers

This cross-reference information is provided as a guide only, because part-to-part compatibility between manufacturers is not always the same. If you do not find a direct cross-reference in this guide, contact the VRN Sales Department in St. Petersburg, Florida at 813-347-2181. Chances are, with our constantly expanding product lines, we still may be able to satisfy your immediate need.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

Terminals: L, Insulated Flexible Leads; P, Printed Circuit Pins Base Mounted; W, Printed Circuit Pins Edge Mounted 180° from Screw; X, Printed Circuit Pins Edge Mounted 90° from Screw; Y, Printed Circuit Pins Base Mounted.

Failure Rate Designation: In percent/1000 Hours M=1.0, P = 0.1, R = 0.01, S = 0.001

Specifications Subject to Change Without Notice.

Military Part Number: Consists of the document number and a dash number with letters which signify - Terminal Type and Failure Rate.

Example: M39015/1 - 001 L M

- M39015/1 - Document number
- 001 - Dash number from table
- L - Terminal type
- M - Failure rate level

RTR12 D L 101 M

- RTR12 - Style
- D - Characteristics
- L - Terminals
- 101 - Resistance Mil-Code
- M - Failure rate level

TRIMMER POTENTIOMETER CROSS-REFERENCE GUIDE

FAIRCHILD WESTON
Schlumberger

THIS GUIDE PROVIDES A FAST CROSS-REFERENCE BETWEEN WESTON PRODUCTS AND COMPETITIVE UNITS OFFERED BY OTHER POTENTIOMETER COMPANIES. IT IS NOT MEANT TO INFER EXACT INTERCHANGEABILITY IN ALL INSTANCES. FOR FURTHER INFORMATION CONCERNING PRODUCT SUBSTITUTES CONTACT YOUR WESTON SALES REPRESENTATIVE OR DISTRIBUTOR.

NOTE 1: Where a Weston series number is followed by a Mil-Designation style (EG: RT22C2P) this type unit is listed on the Qualified Product List (QPL). The competitive unit would also appear on the QPL list unless otherwise noted.

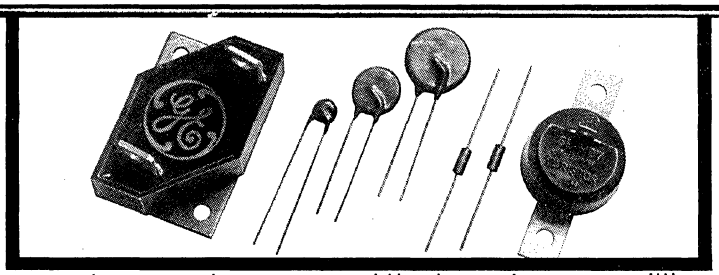
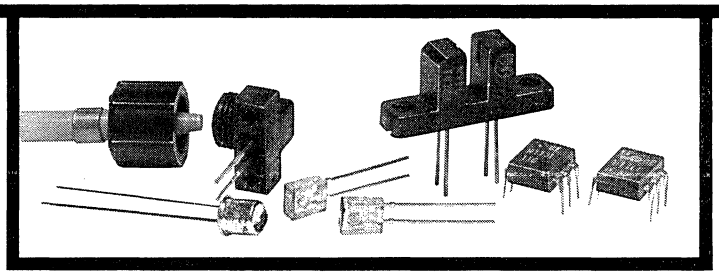
THIS IS THE GENERAL ELECTRIC FAMILY OF SEMICONDUCTORS.
HI-LINE™ RECTIFIER
HI-LINE™ Power Module
GE D64VS5 835
IT CONTAINS THE SOLUTIONS TO YOUR MOST DEMANDING SYSTEM DESIGN NEEDS.
222-35

GE-MOV® II VARISTORS CAN STOP VOLTAGE TRANSIENTS FROM DESTROYING SYSTEMS.



Since 1973 General Electric has been a leader in transient voltage protection with its comprehensive line of metal oxide varistors (energy ratings from .1 to 6500 joules, peak current ratings from 100 to 50,000 amperes). These devices have saved our customers and their customers millions of dollars in repair, replacement and downtime costs.

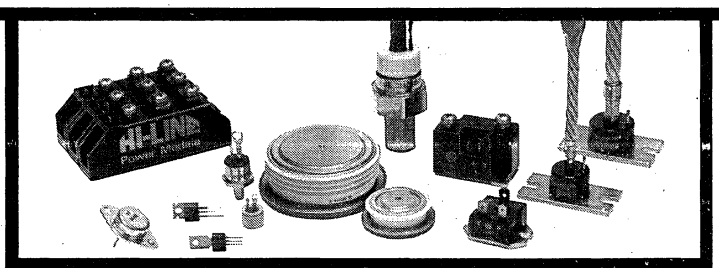
IN THE FIELD OF OPTO-ELECTRONICS, GE MEANS QUALITY, LONG LIFE AND RELIABILITY.



There are two reasons for GE's opto-electronic leadership. The first is our use of premium liquid epitaxial processed IREDs which greatly improve performance. The second is our patented ion-free glass dielectric coupler construction.

GE quality and reliability extends across our full line of optoelectronics products: Couplers, Fiber Optic Emitters/Detectors, Interrupter Modules, Matched Emitter/Detector pairs, IREDs, and Silicon Photo Detectors.

25 YEARS OF INNOVATION HAVE MADE GE THE LEADER IN POWER.



The cornerstone of GE power innovation is GE technology. We developed glass passivation, plastic power packaging, direct bonded copper to ceramic, and large area monolithic power chips. Today, GE technology is being focused on meeting the power management needs of the 1980's — including improved device efficiency, reliability, and cost effectiveness at higher power — with new innovations in chip and packaging technologies.

If you would like to know more about General Electric semiconductors call your local GE Electronic Components Sales Office or authorized GE Electronic distributor, or write on your letterhead to:

Index of symbols

- α — Conduction angle
- C — Capacitance
- I_F — Forward (DC) current
- I_{FAV} — Average forward current 40 to 1,000 Hz of one halfsine wave at T_{amb} or T_{case}
- I_{FSM} — Surge forward current, peak value 10 ms
- I_Z — Zener (reverse) current
- I_R — Reverse current, maximum value at T_j and U_{RRM}
- L — Distance from case
- P_{tot} — Total power dissipation
- R — Resistance
- t_{rr} — Reverse recovery time, typical value
- T_{amb} — Ambient temperature
- T_{case} — Case temperature
- T_j — Junction temperature
- T_L — Lead temperature
- T_{op} — Operating temperature
- T_{stg} — Storage temperature
- U_{BR} — Breakdown voltage
- U_F — Forward voltage drop, maximum value at rated I_F
- U_{RMS} — RMS voltage
- U_{RRM} — Repetitive Peak reverse voltage
- U_{RSM} — Peak reverse voltage, 10 ms
- U_Z — Zener (reverse) voltage

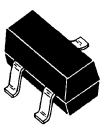
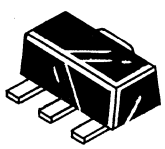
MICROMINIATURE SPACE-SAVING ALTERNATIVES FOR DISCRETE DEVICES

TO-236AA



SOT-23

CASE 345-1



SOT-89

Package (Body) Size:		
Length	0.12″ (max.)	0.181″ (max.)
Width	0.055″ (max.)	0.102″ (max.)
Maximum Die Size:	30 mils x 30 mils	60 mils x 60 mils
Maximum P_D*:	350 mW	1.0 W

*Mounted on alumina substrate

A wide variety of discrete components from Motorola's repertoire of reliability-proven semiconductor processes and geometries are available in the SOT (Small-Outline Transistor) packages. Products include Bipolar and Field-Effect Transistors (FETs); Switching, Zener and Varactor Diodes; and Silicon Controlled Rectifiers (SCRs). These surface-mounted SOT devices are currently being used by circuit designers on printed circuit boards as well as ceramic substrates.

Significant features of SOT devices include:

- Complete Pretest Capability — 100% electrically tested.
- Handling and Assembly Ease — devices can be positioned manually or by using automated placement equipment.
- Reliability — SOTs are subjected to the same rigid reliability tests performed on all Motorola plastic packages.
- Small Size/Less Weight — considerable size reduction and weight saving is achieved in circuit designs using "SO" surface mount technology.
- Broad Line — Motorola offers over 250 standard discrete devices in the SOT package (inquiries regarding customers special requirements are invited).
- Marking Capability — A multi-digit code is laser marked on all SOT devices.
- Multi-Sources — There are many U.S. and foreign sources of SOTs.
- Packaging — SOTs are shipped in vials or via the industry accepted 8 mm tape and reel format for automatic placement.
- Standard SOT-23 versus "Low Profile" SOT-23 — Motorola offers both the standard SOT-23 outline (TO-236AA) and the new "low profile" SOT-23 (TO-236AB). The only difference is the clearance from the bottom of the package to the surface of the substrate:
  Standard SOT-23: 0.004″ Min./0.0098″ Max.
  "Low Profile" SOT-23: 0.0005″ Min./0.004″ Max.
  The low profile package is primarily designed for customers using double-sided PCB with the SOT-23s mounted on the bottom side of the board and the non-surface mounted devices inserted in the top side of the board.
- Selector Guide — Send for your copy of Motorola's "Microminiature Products" brochure (BR-127) for additional information.

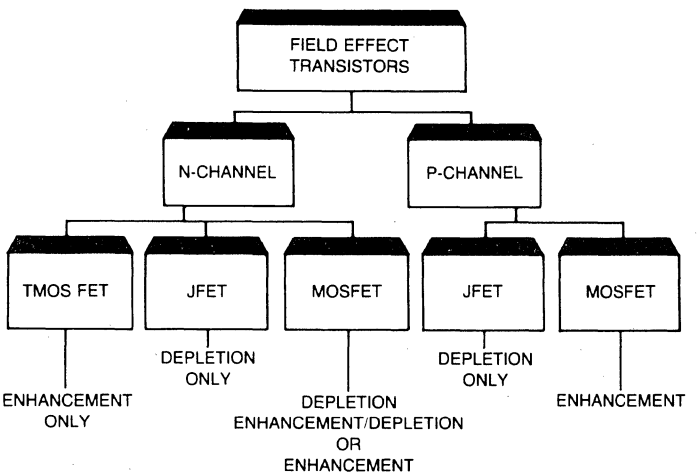
SMALL-SIGNAL FIELD-EFFECT TRANSISTORS

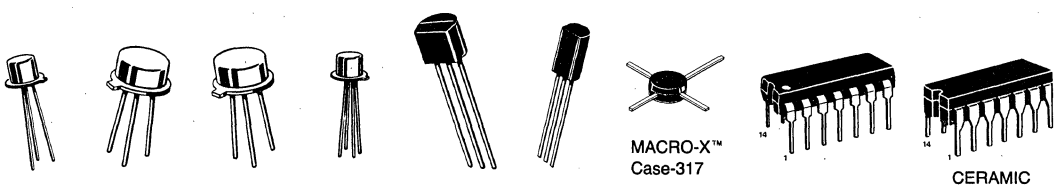
Motorola offers a broad line of Small-Signal Field-Effect Transistors that encompass the latest technology and covers the full range of FET applications.

Types of FETs



- JFETs — N- and P- channel which operate in the depletion mode are available in both metal and plastic packages. Applications include general-purpose amplifiers, switches and choppers, RF amplifiers and mixers.
- MOSFETs — are available in either depletion or enhancement mode. They are available in both N- and P- channel, single and dual gate construction. Applications include smoke detectors, RF amplifiers and mixers for TV tuners, radio, etc.
- TMOS™ FETs — have an oxide-insulated gate which controls vertical current flow. TMOS devices exhibit higher input impedance, faster switching, enhanced thermal stability and easier paralleling than bipolar transistors. Additionally, they have lower "ON" resistance and higher power handling capability than conventional horizontal MOSFETs or JFETs.

Our package line-up is the most comprehensive in the industry, from the low-cost plastic to the hermetic metal can packages:



For additional information, order: SG33R1 FET Selector Guide and Cross Reference. This selector guide/cross reference provides: Specs on over 250 standard FETs, design considerations, applications information, package information and a cross reference/interchangeability guide.

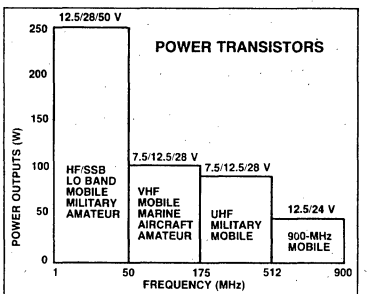
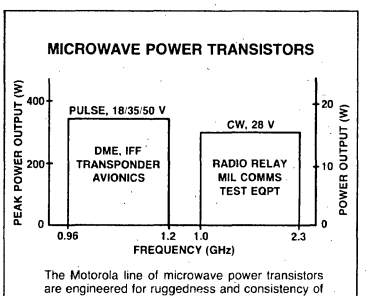
RF COMPONENTS

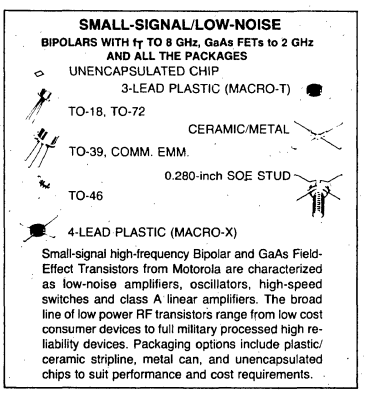
The Motorola broad line RF component portfolio encompasses low-power low-noise devices to high-power transmitter devices, unencapsulated chips to packaged transistors to hybrid modules. Device technology covers silicon bipolars, TMOS power FETs, and GaAs FETs. We have a complete engineering staff to help you with your application and extensive technical literature in application notes, engineering bulletins, selector guides, and the RF data manual. For RF components think Motorola RF.



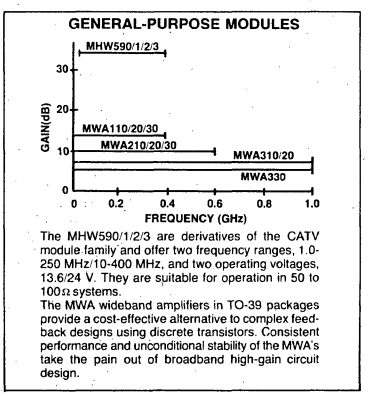
Motorola's RF Power Bipolar and TMOS Field-Effect Transistors are categorized according to the application and frequency band for which each type is optimized. Outputs up to 250 watts are available, suitable for commercial, military, ground, airborne, and marine use from 1.5 MHz to 1 GHz.



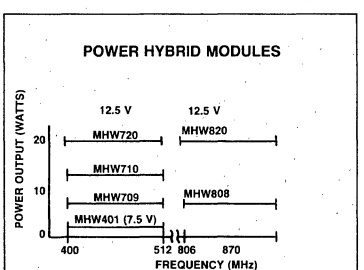
The Motorola line of microwave power transistors are engineered for ruggedness and consistency of performance from unit to unit, lot to lot. Gold metal systems and silicon nitride passivation ensure reliability. Both hermetic and organic sealed packages provide cost effective options to suit the end-use environment. Internal input/output impedance matching elements facilitate broadband designs.



Small-signal high-frequency Bipolar and GaAs Field-Effect Transistors from Motorola are characterized as low-noise amplifiers, oscillators, high-speed switches and class A linear amplifiers. The broad line of low power RF transistors range from low cost consumer devices to full military processed high reliability devices. Packaging options include plastic/ceramic stripline, metal can, and unencapsulated chips to suit performance and cost requirements.



The MHW590/1/2/3 are derivatives of the CATV module family and offer two frequency ranges, 1.0-250 MHz/10-400 MHz, and two operating voltages, 13.6/24 V. They are suitable for operation in 50 to 100Ω systems.
The MWA wideband amplifiers in TO-39 packages provide a cost-effective alternative to complex feedback designs using discrete transistors. Consistent performance and unconditional stability of the MWA's take the pain out of broadband high-gain circuit design.



Power Hybrid Modules are self-contained Power Amplifiers which provide a pre-engineered, functional performance-tested alternative to the use of individual power transistors. Producing VHF/UHF power outputs up to 20 W, these modules offer field-replaceable, consistent performance, and tolerance to load mismatch.

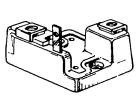
TO-218

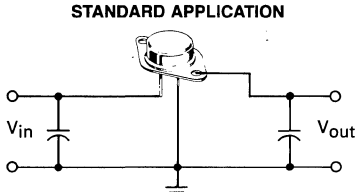


- Breakdown Voltages to 1000 Volts
- Current Ratings to 90 Amperes
- $r_{DS(on)}$ as low as 0.02 Ohms

SMARTpower™ is a technology that combines integrated circuits on a power control device. The unique feature is that vertical current flow is controlled rather than lateral current flow that is conventionally used in lower power circuits.

The first of a series of SMARTpower devices is the MPC100 — a 5.0 V, 10 A series regulator with a low differential voltage.

STANDARD APPLICATION



MOTOROLA
SEMICONDUCTORS
P.O. BOX 20912 • PHOENIX, ARIZONA 85036

THYRISTORS
SCRs • TRIACS
TRIGGERS

NEW FOR '83

MOS SCRs — MCR1000
Fast SCRs — MCR2080 (t_q < 6.0 μs @ I_F = 5.0 A)
MCR2150 (t_q < 4.0 μs @ I_F = 15 A)
SIDAC — MK1V

CHIPSCRETES

A chipscrete is a TO-220 with the tab clipped, leads bent and leadframe flag soldered to a ceramic insulator. Any TO-220 can become a chipscrete.

RECTIFIERS

MAKE THE WHOLE WORLD DC!

Offering the user a broad line of rectifiers to fit all design requirements is what made us the unquestioned leader in this field. And quality, reliability and competitive prices are what keep us there.

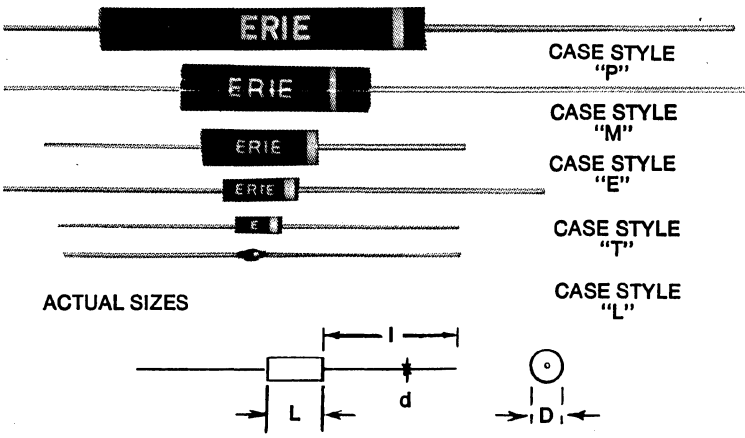
high voltage silicon rectifiers
fast recovery, HX / low leakage, HV

MURATA ERIE NORTH AMERICA, INC.



Murata Erie high voltage silicon rectifiers are available with peak reverse voltage ratings from 1KV to 30KV, in either transfer molded or epoxy protected packages. Features include nanoampere leakage, compact design and high reliability over a wide temperature range. These rectifiers have found applications in numerous military, industrial and aerospace projects.

ECG® Sylvania Universal Replacement Semiconductors

Maintenance — Routine Preventive Maintenance
Repair — Repair of Equipment Failures
Operations — Internal Equipment Development

TRANSISTORS	47 case styles to fit almost every application
Bi-Polar Types	Both Silicon and Germanium
Complementary Pairs	Up to 200 watts, up to 1500 volts
Bi-Polar Selector Guide (Silicon & Germanium)	
RF Selector Guide	Covering RF Power devices to 870 MHz
Field Effect Transistors (FET)	Single and Double gate for high and low frequency
Darlington Power Transistors	Gain up to 90K, power up to 250W, IC to 50A
DIODES AND RECTIFIERS	38 case styles for most applications
General Purpose	Both Silicon and Germanium
PIN Diodes	For fast switching
HV Rectifiers	Voltages to 45,000 volts
Varistors (Temperature Compensating Diodes)	Biasing diodes for hostile environments
Varistors (Voltage Compensating Diodes)	
Varactors (Variable Capacitance Diodes)	For tuning, AFC
Bridge Rectifiers	1 Amp to 40 Amps, up to 1000 volts
HV Rectifiers (Avalanche Silicon)	High voltage and high current
ZENER DIODES	From ½ to 50 watts, from 2.4 to 200 volts
INDUSTRIAL RECTIFIERS	From 3 to 2200 Amps up to 1600 volts
SILICON CONTROLLED RECTIFIERS (SCR)	
Commutating (Phase Control)	0.8 to 1200 Amps, voltages to 1200v
Switching	Frequencies to 16 kHz
Gate Turn Off	For unusual applications
TRIACS	0.8 to 40 amperes, with voltages up to 1000 v in a variety of case styles to accommodate most applications
MICROPROCESSORS/RAM's	Three popular microprocessors (6800, 6802, 8080A), 8 peripheral circuits and 8 RAM's.

ECG® Sylvania Universal Replacement Semiconductors

LINEAR INTEGRATED CIRCUITS .....
Linear IC and Module Circuits .....

Op amps, wideband amplifiers, single and dual comparators, voltage regulators, VCO's, Audio PO's, zero crossing switches and timing circuits. Some in choice of package styles.

OPTO-ELECTRONIC DEVICES .....
Discrete LED Indicators .....
Infrared Emitting Diodes .....
Phototransistor Detectors .....
Optoisolators .....

Red, orange, green, yellow and IR, in both narrow and wide angle. Photo-transistors to cover the IR and visible spectrum. Optoisolators with transistor, Darlington, SCR or TRIAC outputs. Both 1 and 2 digit numeric displays.

INTERFACE INTEGRATED CIRCUITS .....
Display Driver Circuits .....
Display Driver Outlines .....

Analog and digital IC's for both decoding and driving from both CMOS and TTL logic.

DIGITAL INTEGRATED CIRCUITS .....
CMOS .....
TTL (Including 74C CMOS Series) .....
DTL .....
HTL .....
RTL .....

4000, 4500 series and 40000 series.
74C, 74L, 74H, 74LS, 74S and 7400 series.

SPECIAL PURPOSE DEVICES .....
Silicon Unijunction Transistors (UJT) .....
Programmable Unijunction Transistor (PUT) .....
Silicon Bilateral Switch (SBS) .....
Silicon Unilateral Switch (SUS) .....
Silicon Asymmetrical Switch (SAS)
Silicon Controlled Switch (SCS) .....
Bilateral Trigger Diodes (DIACs) .....
Metal Oxide Varistors (MOV) .....

545-page Philips ECG Master Guide . . .
3,000 ECG types that replace
over 200,000 industry numbers.

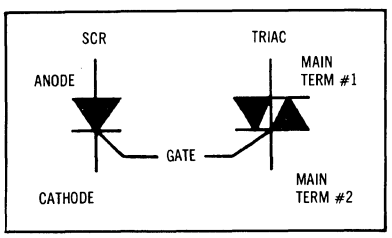
eem MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors*. Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/ reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

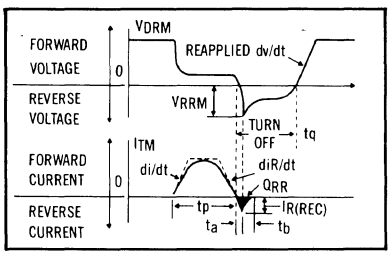


Fig. 1. Concurrent voltage and current waveforms

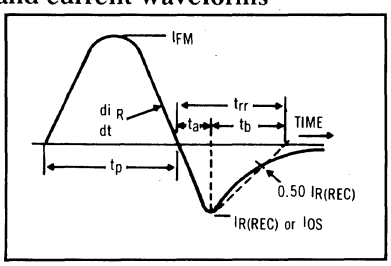

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$; *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature*.

$T_{J(MAX)}$: *Maximum allowable junction temp*.

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

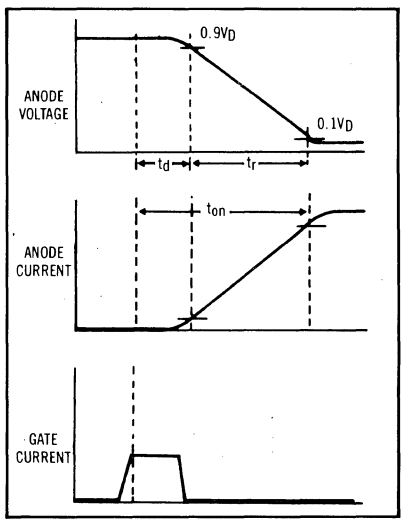

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time*. Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage*.

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

HY-A-SIL HIGH-AMPERE SILICON RECTIFIERS

FEATURES

- High Operating Temperature, 190°C (Up to 120°C ambient)
- High Operating Voltage (Up to 600 p.i.v.)
- High Efficiency (99% compared to about 75% for selenium)
- Excellent Regulation (4% compared to about 15% for selenium)

VARO Silicon Rectifiers and Bridges

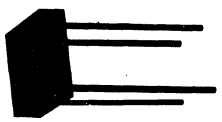
Epoxy Axial Lead Rectifiers
Fast Recovery (200 ns) or Controlled Avalanche. Glass passivated chips.

V3 Series: 3 a, 100-200 a surge; 50 to 1,000v

Epoxy Bridge Rectifiers
Fast Recovery (200 ns) or Controlled Avalanche. Glass passivated chips.

VM Series: 1 a Bridge; 50 to 1,000v

VE Series: 1 a; 25 to 1,000v



VS, VH, VJ Series: 2, 6 & 10 a; 50 to 1,000v

VK Series: 30 a; 200 to 1,000v

Integrated Bridge Rectifiers
Fast Recovery (200 ns) or Controlled Avalanche. Glass passivated chips.

IN, VT, VY Series: 10 to 36 a; 200 to 600v; press fit, stud, T03 flange packages; full-wave bridge, center tap or three phase

R700 Series: 30 a; 200 to 600v; T03 package

Schottky Barrier Rectifiers
Extremely Fast Recovery (<10 ns)

VSB Series: 750 ma Bridge; 20 to 40v

VSK Series: 1 to 5 a; 20 to 40v

VSK Series: 6 a; 20 to 40v

VSK Series: 12 a; 20 to 40v

VSK Series: 15 to 30 a; 20 to 45v

VSK Series: 30 a; 20 to 40v

VSK Series: 40 to 60 a; 20 to 45v

High Temperature Schottky Rectifiers (175°C)
Extremely Fast Recovery (<10 ns)

VSK Series: 10 a; 20 to 45v

VSK Series: 20 a; 20 to 45v

VSK 31, 32 Series: 30 a; 50 to 60v

VSK 231, 232 Series. 60 a; 50 to 60v

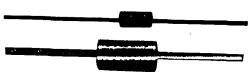
VSK 71, 72 Series: 75 a; 50 to 60v

VSK 2000 Series: 200 a; 50 to 60v

In the concept stage? Design stage? Full production? Look to Varo for the solution to your specific rectifier requirements. And count on reliability and economy as part of the answer. Standard devices are stocked for fast delivery; specially modified or custom designed/manufactured devices can be shipped in minimum time.

Silicon Rectifiers and Bridges

EPI High Efficiency Rectifiers
Fast Recovery (35 to 50 ns)



VHE Series: 1 to 6 a; 50 to 600v

VHE 1400 Series: 10 a; 50 to 600v

VHE 2400 Series: 20 a; 50 to 600v

VHE 700 Series: 30 a; 50 to 200v

VHE 2600 Series: 50 a; 50 to 200v

VHE 800 Series: 70 a; 50 to 200v

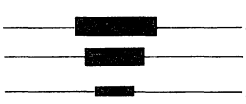
Very Fast Recovery Rectifiers
Fast Recovery (100 ns)

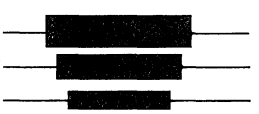
TG Series: 1 to 2 a; 400 to 1,000v

TG Series: 8 a; 400 to 1,000v

TG Series: 16 a; 400 to 1,000v

High Voltage Silicon Rectifiers
Fast Recovery (100 to 250 ns) or Standard





H 1700 Series: 3 ma; 3 kV to 27 kV

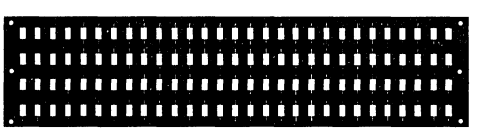
VA, VB, VG Series: 5 to 200 ma; 1 kV to 20 kV

VF Series: 40 to 130 ma; 5 kV to 50 kV

H 1601 Series: 70 to 400 ma; 1 kV to 18 kV

VC Series: 1 to 2 a; 2 kV to 12 kV

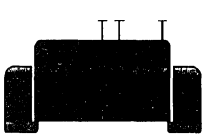
High Voltage Rectifier Assemblies
Fast Recovery (100 to 250 ns) or Standard



H Series: X-ray applications; 220 ma, in oil; 75 kV to 200 kV

H Series: Pollution control applications; 500 ma to 1.7 a in oil; 100 kV to 360 kV

High Voltage Multipliers



MH Series: Doubler, Tripler. Quadrupler; 2 ma; to 15 to 40 kV

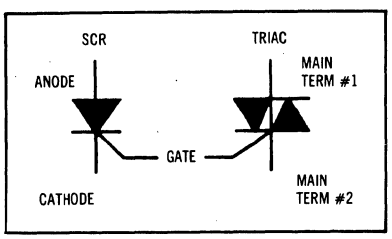
eem MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors.* Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

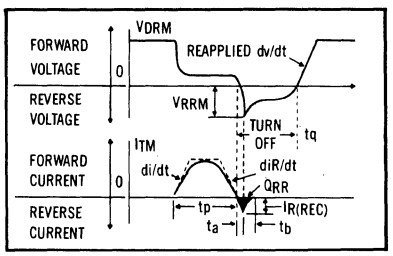


Fig. 1. Concurrent voltage and current waveforms

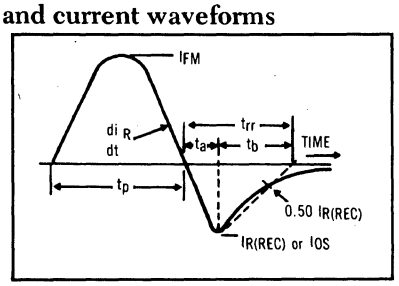

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$; *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature.*

$T_{J(MAX)}$: *Maximum allowable junction temp.*

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

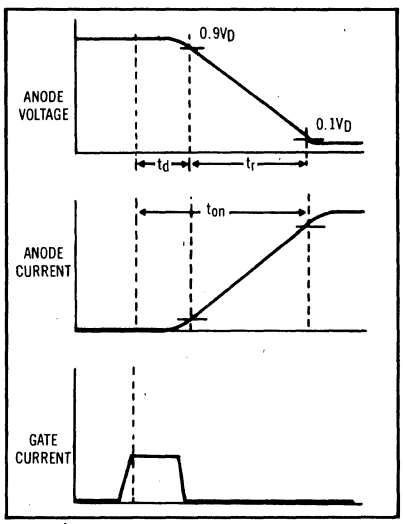

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time.* Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage.*

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

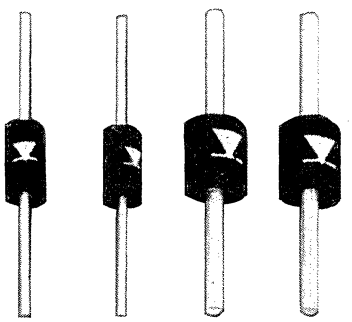
V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

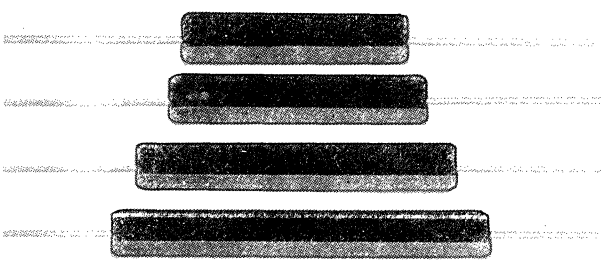
V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

HIGH VOLTAGE DISCRETES 1.5 KV to 10 KV

- 25 MA to 100 NS Recovery Time (Body Size .090" x .200")
- 100 MA - 250 MA to 100 NS Recovery Time (Body Size .125" x .250")
- 500 MA - 2 AMP to 100 NS Recovery Time (Body Size .200" x .250")



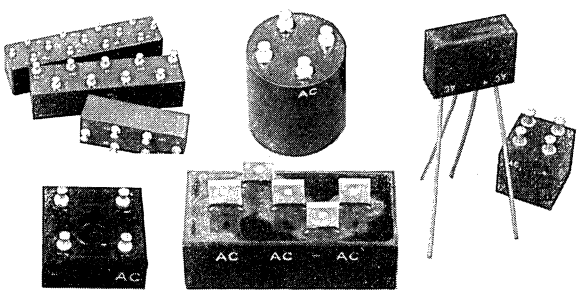


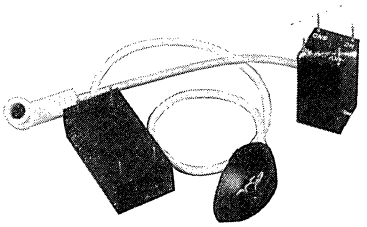
HIGH VOLTAGE RECTIFIER STACKS

Stacked High Voltage Discretes repotted to provide the PIV needed. Size made depending on operating in air or oil media.

HIGH or LOW VOLTAGE ASSEMBLIES

Single bridge or multiple bridge configurations available or to your package criteria. Low voltage with or without MIL QPL Rectifiers.





HIGH VOLTAGE MULTIPLIERS

Multipliers made with number of stages to yield output to 150 KV+.

CUSTOM PACKAGING/PROCESSING

- Packaging can be tailored to characteristics and space
- Processing of discretes or assemblies can be to specs or MIL.

VOLTAGES MULTIPLIERS, INC.

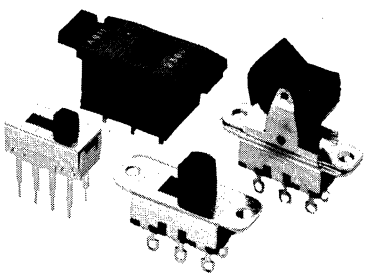
For Switches . . .Who Else But

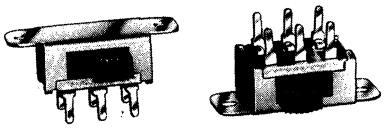
SWITCHCRAFT

Who else but the industry's leader in proven-quality standard size and miniaturized "option loaded" pushbutton, slide, lever switches . . . lighted & unlighted; single & multiple-station.

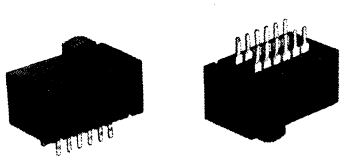
Instrument Quality Slide Switches



A broad line of standard size and miniaturized switches with features like "snap-slide" lifting, "double-wipe" slide switching action for clean, effective contact over many years.



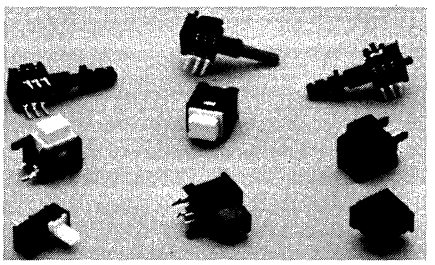
New Series 62000 miniaturized right angle slide switches, 2C (DPDT) locking action, have knob actuator on the side – offering especially low profile, PC board space savings.



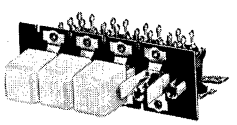
New space-saving Series C63000 miniature slide switches offer 4 pole/2-position switching for close PC mounting on .100 x .200 inch centers.

Long Life Single/Multiple-Station Pushbutton Switches

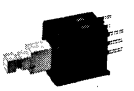
Switchcraft offers a broad line of single-station pushbutton switches with large selection of circuits, terminal styles, colors, functions. Shown above is the Box Switch, Series BXR offering terminal versatility, broad switching capabilities in minimum space.



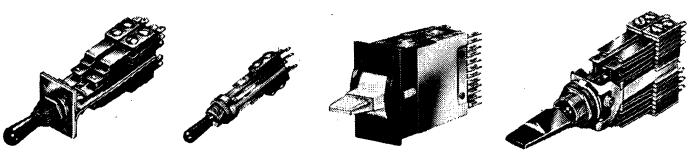
New P70000 Series lighted/unlighted miniature key switches offer designers variety of features; short stroke switching action; long life; audible "click" positive tactile feel for operation awareness.



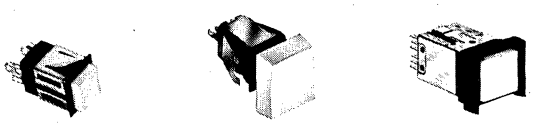
The Company pioneered economical, commercially-feasible multiple-station switches; Multi-Switch® switches, with up to 18 stations.



Series 98000 IBS miniaturized pushbutton switches have special versatility, low cost, low contact resistance (tested to 20 milliohms). IBS Multi-Switch key switches offer 10, 15, 20 mm centers; 1-12 stations; interlock, non-lock, push-lock/push-release.



Lever Switches – Large variety of standard size/miniature switches; lighted/unlighted; up to 4PDT in locking or momentary actions. Ratings up to 3 A, 300 W max.; AC non-inductive load. Lighted types have up to 8 A, 125 V AC contacts; up to 8PDT switching. Levers can light different color for each position.



Pushbutton Switches – lighted/unlighted, standard size/miniature. Offer tactile push-button action; legends; ultra-compact, space savings capabilities; dry circuit to high current; multiple-pole contacts; momentary/locking actions; color buttons; single-hole panel/chassis or pendant (cord) mount; solder/PC terminals.

Industry's innovator of switches, connectors, telecomponents, audio accessories, molded cable assemblies, keyboards.

SERIES TT AND TTE 3A SUBMINIATURE TOGGLE SWITCHES WITH LUG TERMINALS

Series TT and **TTE** subminiature toggle switches with silver contacts; rated 3 A @ 125 VAC or 28 VDC; gold flashed solder lug terminals. Choice of ¼-40 or 10-48 threaded bushings. These tiny instrument grade toggle switches can be mounted only ⅝" apart on panel. Uniform 0.1" spacing between all terminals and mounting studs permits mounting on standard "perf" boards. **TTE** models have watertight bushings and panel seals.

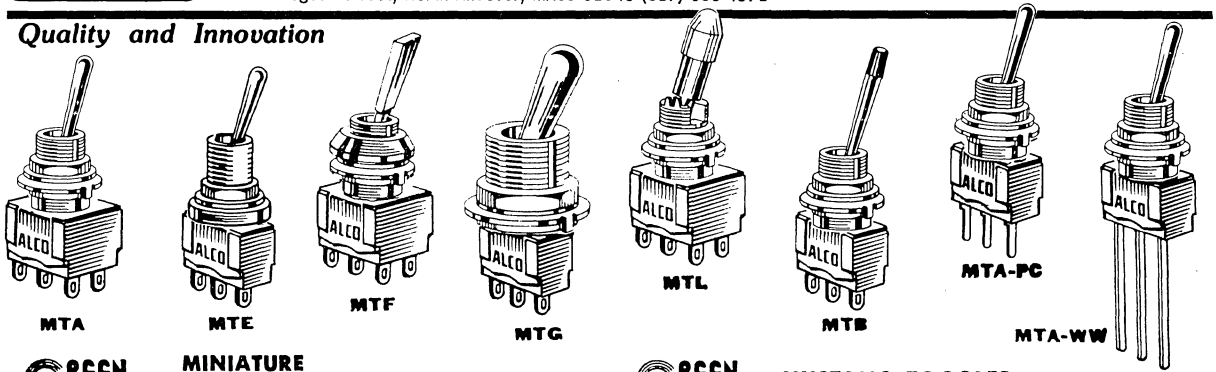
SUBMINIATURE TOGGLE SWITCHES

Quality and Innovation



GREEN SERIES MINIATURE TOGGLE SWITCHES

All ALCO Green Series miniature switches have molded-in terminals which prevent solder, flux and other contaminants from entering the contact area. All contacts are fine silver. Contacts and terminals have gold finish to inhibit oxidation, prolong shelf life, and facilitate soldering. Green diallyl phthalate case withstands high temperatures. All toggle types are U.L. listed and have anti-push-in lever captivation to prevent accidental damage. All types have ¼"-40 high torque bushings, except MTG series; MTG types have 15/32"-32 bushings. Rated 6 amps at 125 VAC, 3 amps at 250 VAC.

GREEN SERIES MINIATURE BAT HANDLE TOGGLES

Terminals accept two #20 AWG wires.

MST MINIATURE TOGGLE SWITCHES

Slim, bat handle toggle switches for miniature applications with limited back-of-panel clearance. Terminals and contacts are solid silver (center terminal, copper with silver plate). Case material, black phenolic resin; ¼-40 threaded bushing. Rated 6 amps at 125 VAC. Offering high capacity for small size, SPDT and DPDT types have life cycle of over 80,000 on-off operations; 3PDT and 4PDT, over 20,000. High voltage barriers between terminals and contacts; 1 piece body.

MSP SERIES MINIATURE PUSHBUTTON SWITCHES

MSP-105, MSP-205—Snap action. Rated 6 A, 125 VAC. Solid silver contacts and terminals. Bushing ¼"-40 with keyway. Black phenolic case. Life, 25,000 cycles. **MSP-103**—Economy, low pressure operation. Rated 1 A, 125 VAC. Silver-plated brass contacts and terminals. Plunger travel, .098". Bushing ¼"-40. Diameter .408". **MSPS-103C**—Similar to MSP-103, but smaller diameter, .310". Rated 0.5 A at 125 VAC.

MAGNETIC REED PUSHBUTTON SWITCHES

SPST momentary for data processing equipment; ceramic magnets eliminate springs. Contacts are glass-encapsulated reeds for long life; plunger is keyed and non-rotating; metal case withstands abuse. Rated 100 mA at 50 VDC; resistance, 100 milliohms. Contact bounce, 1 msec; plunger travel, 5/64". Oper. force, 2 oz. Life, 10 million cycles.

SL SERIES MULTI-POSITION SLIDE SWITCH WITH PC TERMINALS

Designed specifically for PC applications. Save space, installation time and wiring errors. Substitute for rotary switches and other ideal uses. Feature a ball detent for positive tactile feel. Contacts are self-cleaning and terminals are sealed for added protection. Internal construction is similar to the MSS Series.

DSS-8

DIP SERIES DUAL IN-LINE MOUNTING

DIP switches provide high reliability at reasonable cost. All models are designed for soldering onto PC boards or may be optionally used with standard DIP sockets. Terminals and contacts are beryllium copper with gold plated over nickel to assure dependable service for low-energy level use. The low-profile DLS and DLS-SD models have molded-in terminals; all other types have epoxy sealed bases for protection during the soldering operation. The DLS and DLS-SD models are supplied with a protective cover having an "actuator lock" feature that prevents accidental operation and protects the inner mechanism during cleaning cycles. These covers are also available as an option for the DSS models.

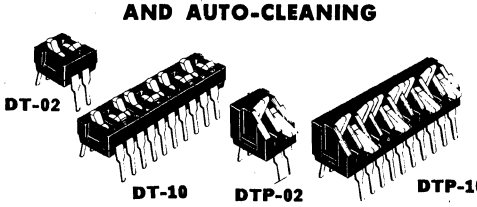
DIP SWITCHES FOR WAVE SOLDERING AND AUTO-CLEANING



No tape seal required—allows extended actuators. Self-cleaning design allows exposure to dirt and contaminants without falling. Contact Rating: 1 amp at 24 VDC without switching, 100 mA at 5 VDC with switching. Initial Contact Resistance: 30 milliohms, max. Operating Temperature Range: −30° C to +85° C. Life Expectancy: 10,000 cycles.

Rotary Switches

Quality and Innovation

MRS SERIES MINIATURE ROTARY SWITCHES

MRS Series 30° and 36° miniature rotary switches are rated 150 ma @ 115 VAC. Terminals are permanently molded into DAP base. A choice of 1, 2, or 3 poles with adjustable stops up to twelve positions. The MRSE is nonadjustable with an internal O-ring shaft-to-bushing seal and also an outer seal for protection in wet environments. The suffix "S" indicates long shaft and the suffix "PC" indicates printed circuit mounting. Suffix "C" indicates continuous rotation. Suffix "X" indicates shorting (make-before-break) contacts.

DR SERIES ENCODED ROTARY DIP SWITCHES

Rotary DIP switches have internal sealing to allow wave soldering and immersion cleaning. Screwdriver, knob, and shaft types are available in both upright and right angle versions. Contact Rating: 0.4 VA at 20 VDC. Initial Contact Resistance: 50 milliohms max. at 2 VDC. Insulation Resistance: 1000 megohms min. at 100 VDC. Life Expectancy: 20,000 cycles min.

MRSB SERIES PROGRAMMABLE

These 30° and 36° rotary switches are rated 150 ma @ 115 VAC. All models in this series are completely sealed, allowing flow soldering and submersible defluxing without the need for caps, disposable covers, etc. Standard MRSB switches have screwdriver adjust; "K" and "U" versions have built-on aluminum knobs for compactness and ease of operation. The "U" version also allows switching position to be read from edge of PC board. MRSB switches are identical to the standard MRS Series in size and operational features. Models with an "X" suffix have shorting (make-before-break) contacts. All models in this series are nonadjustable.

Vivisun 20/20™ Sunlight Readable Switches

Mil-Spec 22885/90

NOW DUSTPROOF/DRIPPROOF

ENVIRONMENTAL

Dripproof: VIVISUN 20/20 dripproof switch meets the enclosure design type (2) requirements of Mil-S-22885 as specified in para 3.6.17.2. When tested per para. 4.8.17.2 dripproof seal does not allow leakage of water through the seal as determined by visual examination and dielectric test of para. 4.8.16.1

Sand & Dust: The seal effectively prohibits the entrance of sand and dust per MIL-STD-108E.

MECHANICAL

Dimensions: The dripproof sealed switch design, construction, and physical dimensions conform to figures V & VI. For other VIVISUN 20/20 dimensions refer to standard data sheet 99-1-78-2 page 6.

Mounting: Each dripproof unit is supplied with a mounting sleeve, dripproof mounting spacer, dripproof mounting flange and dripproof sealed cap. The dripproof mounting spacer may be discarded for mounting without edge-lighted panel. (refer to figure V).

Seal Materials: Seal is high grade durable silicone rubber per ZZ-R-765. Surface is black matte finish.

Front Lamp Replaceable: To replace lamps simply lift back corner of seal from edge of mounting flange and peel back. Slip fingernails under seal in extraction slots and pull forward. For resealing, press cap back into switch and apply finger pressure firmly to the corners and around the outer edge of seal.

Flexibility: VIVISUN 20/20 dripproof is offered as a momentary and alternate action switch in 1, 2, or 3 pole and as an indicator. Momentary and alternate action switches are limited to −48°C in some applications.

Low Weight: 1.5 ounces maximum, including mounting sleeve and dripproof mounting spacer.

VISUAL

Sunlight Readable: First fully qualified pushbutton switch per Mil-S-22885/90. Legends are readable in a light ambient of 10,000 ft. candles (sunlight) and remain completely deadface when not energized.

Low Level Uniformity: Message remains uniform at reduced voltage levels—no hot spots.

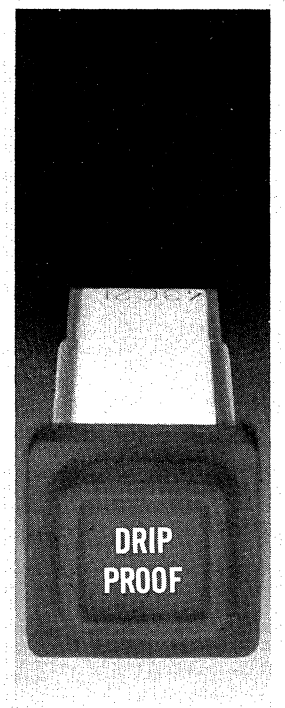

FIGURE V—DIMENSIONS

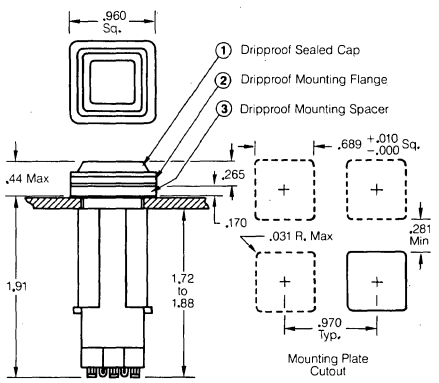

FIGURE VI—DRIPPROOF SEALED CAP

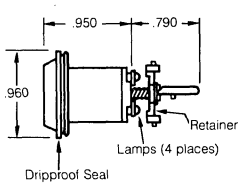

DRIPPROOF SEAL AND PUSHBUTTON CAP ARE INTEGRAL ONE PIECE ASSEMBLY

Refer to Standard Data Sheet 99-1-78-2 pg. 6 for all other electrical, mechanical, visual and environmental characteristics of Vivisun 20/20.

How to order Vivisun 20/20 DRIPPROOF

Product Series	Body Type	Cap Style	Artwork P/N
9 9	– 4	– 2	–

DRIPPROOF OPTION

To designate a VIVISUN 20/20 dripproof switch simply insert the number 4 in the third position and the number 2 in the eighth position of the standard 12 digit part number. For additional information on how to order VIVISUN 20/20 refer to page 7 of data sheet 99-1-78-2.

HOW TO ORDER SPARE COMPONENTS

To order spare dripproof caps and bodies use the digits 4 and 2 in appropriate space as shown in example. For additional ordering information pertaining to spare components refer to page 8 of data sheet 99-1-78-2.

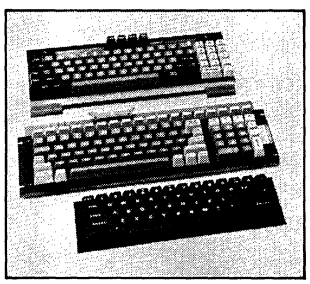
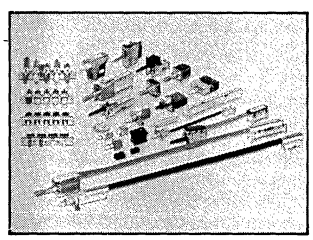
KEY SWITCHES

Choose from several contact types: mechanical, conductive rubber or tactile feedback. Snap-in mounting. Double-shot molded keytops in many colors, shapes, legends. Fully automated assembly assures maximum reliability, with ratings up to 20-million operating cycles.



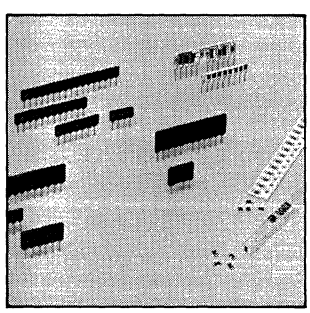
KEYBOARDS

Standard and custom keyboards, fully assembled including switches, keytops, PC board, matrix circuit, encoder circuit. NEW!—Series KFL Low Profile Keyboards meet all the latest European DIN standards for full-travel key switches with reduced profile dimensions.



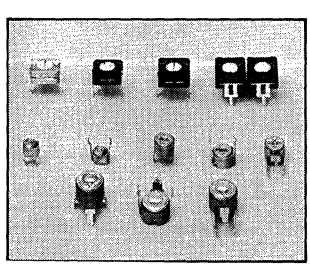
SWITCHES

Alps produces more than 900,000,000 switches per year, including some of the world's smallest, in a variety of types—rotary, push, slide, lever, power, flex and digital—all noteworthy for their unsurpassed smooth-action performance, built-in quality and long-life reliability.



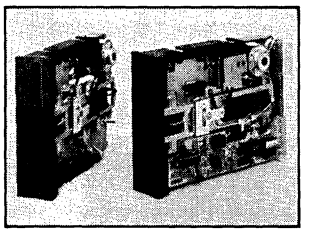
RESISTOR NETWORKS & CHIP RESISTORS

Thick film cermet element on alumina substrate, for extremely high stability. Networks in SIP configuration, from 4 to 17 pins, with resistance values from 10 ohms to 1 megohm. Chips are international standard size, 1.6 × 3.2 × .55 mm, with values from 10 ohms to 10 megohms. Available in bulk, reel tape, or plastic magazine for automatic chip placement machines.



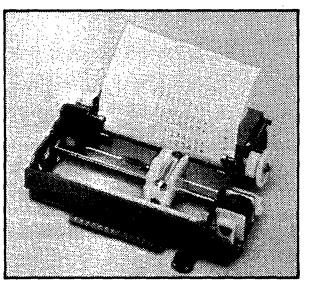
TRIMMER CAPACITORS

Ceramic or film elements, trimmer ranges from 2.5–6 pF to 10–150 pF. Snap-in terminals, with standard, reverse or side mounting—front or rear adjustment. Minimum drift, with virtually linear temperature characteristics. Precision structure protects dielectric from contamination by flux or wax.



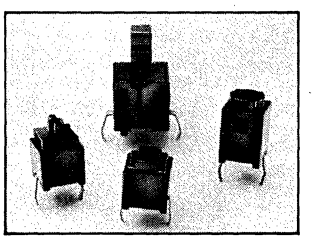
FLOPPY DISK DRIVES

New Series 2000, for 5¼" disks, offers super-slim profile—only 1.69" thick, half the conventional thickness. Standard features include fast access time, automatic eject, long-life ceramic head, and surprisingly low price! Available with or without built-in electronics control board.



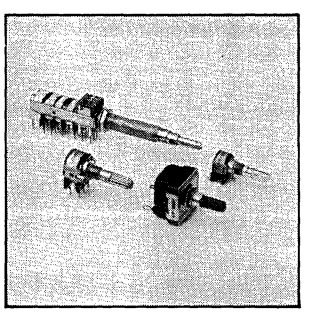
MICROMINIATURE PRINTERS

An incredible example of "The Alps Advantage" in technical innovation, Series DPG printers handle Alpha-Numeric-Graphic requirements, actually *writing* with microminiature ball point pens (1 or 4 colors!) invented by Alps using exclusive ink technology. Available for 2¼" or 4½" ordinary plain paper. Their small size and small price will astound you!



TACT SWITCHES

Tactile key switches with a "snap" (conductive rubber) or "click" (metal contacts) feeling to signal when contact is made. Available in a wide range of life cycle ratings, shapes, sizes, and "feelings"—ideal for many types of mini-keyboard applications.



VARIABLE RESISTORS

Rotary and slide types, ranges from 500 ohms to 2 megohms, with a wide variety of diameters, strokes, tapers, mounting, shafts, levers, etc. Exclusive lubricants for high quality smooth action. Miniature trimmer pots, sizes from 4mm to 16mm, with cermet, carbon film or carbon composition elements—ranges from 100 ohms to 2.2 megohms. Stick controls packaged with 2, 3 or 4 pots.

OTHER PRODUCTS now available from Alps include: telephone keypads, liquid crystal displays, magnetic heads, cassette mechanisms, RF modulators, switchers, TV tuners.

THREE NEW PATENT DESIGNS THAT USE 40% LESS PARTS

1. The slides are split, or bifurcated, so there are two separate slides for *each* contact point. This doubles the contact reliability because you have two independent gold plated contacts at each switch point.
2. The switches are flush with the cover to eliminate accidental, on-off movement once the DIP is programmed. Simple.
3. The package is sealed. The lead frame is molded directly into the housing to provide a one piece, no-leak construction. The cover is ultrasonically molded to the frame after the switch is assembled. There is *no* better construction. Wicking can happen, but it won't get into the switch.
4. The slides are made from beryllium copper, heat tempered to a full hardness, spring formed, plated in a 100 micro inch nickel bath and then spot gold plated 10 micro inch deep at all the contact points. This is the best proven switch contact surface that money can buy.
5. Every one of the switch contact surfaces on the main lead frame are gold plated with 30 micro inch of gold over 50 micro inch of nickel.

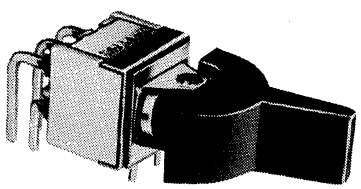
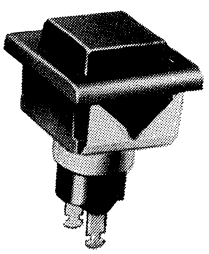
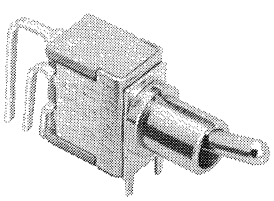
Shown are just a few of our many thousands of quality engineered and produced switches used in countless applications throughout the world. Our lines include miniature toggle, rocker, lever and pushbutton switches, both lighted and unlighted. Standard hardware panel mounting, printed circuit mounting and the hardwareless snap-in models are available in zillions of combinations. Long life **L.E.D. Indicators** integrated with the switch are available for virtually every model switch we make in a choice of cosmetically appealing and colorful bezels. Our highly reliable and time proven mechanisms cover ratings from dry circuit to 6 amp, 125 volts and many are UL recognized. An extensive array of options are available to meet your particular needs.

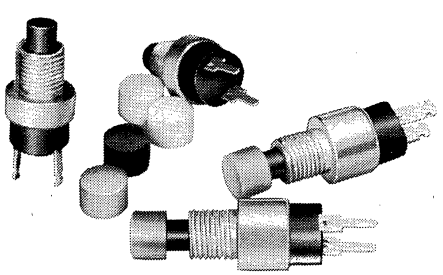




A complete line catalog is yours for the asking.

Contact us for fast response, much quicker than usual deliveries and competitive pricing.





AMP Dual In-Line Package Switches

Features: ■ High Density — Low profile, compact design requires a minimum of pc board area ■ Available in standard, low profile, right angle, multipole and LED versions ■ Simple Operation — Rocker actuators instantly change program ■ Easy Mounting — Switches can be flow-soldered directly to pc board or simply inserted into DIP headers or IC packaging receptacles ■ Low profile switches available with sealing tape to keep out contaminants during assembly operations ■ Economical — Board mounted switches eliminate the need for interconnection wiring to perform switching functions ■ High Reliability — Fully enclosed design protects contact surfaces from environmental hazards. Optional transparent cover is also available ■ Versatile Application — Switches furnished in various sizes, ranging from 2 to 12 positions

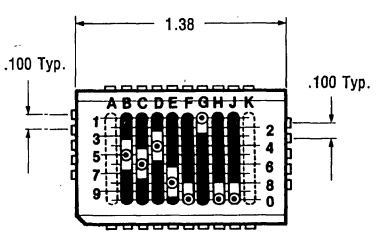
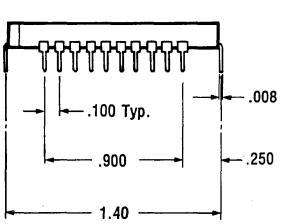
Mini-Matrix Slide Switch

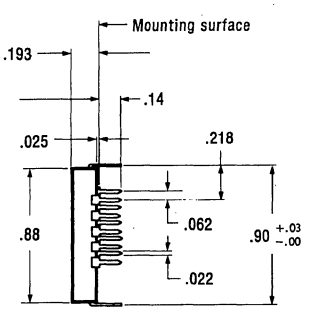
Specifications

Electrical Specifications
Contact Current Rating: Switching — 100 mA at 28 VDC, max.; 0.5 mA at 50 mVDC, min. Non-switching — 500 mA at 28 VDC, max.
Contact Resistance (Dry Circuit): Less than 100 mOhm
Insulation Resistance: 1 x 10^{10} Ohms min. at 100 VDC
Dielectric Withstanding Voltage: 300 VDC, min.
Cycle Life: 5000 detents/slide, min.

Material Specifications
Structural Plastic: UL recognized, 94V-0 rated, glass-filled thermoplastic
Column and Row Buses: Copper alloy, contact areas gold plated
Slide Springs and Contacts: Beryllium copper, gold plated







Switch Configuration	Slots Omitted*	Switch Part Number
10 x 10	—	436270-1
9 x 10	A	436270-2
8 x 10	A, K	436270-3
7 x 10	A, B, K	436270-4

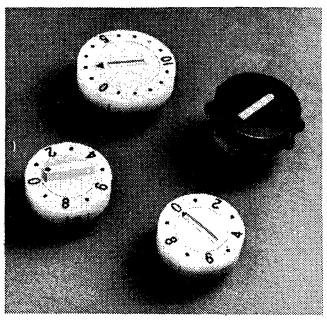
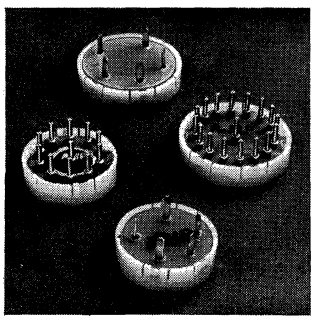
Printed Circuit Board Rotary Switches

6000 Series With Screw Driver Slot, Bar Type Knob, Thumb-wheel Actuation





■ Compact Design — Small diameter, low profile switches are ideal for pc board mounting ■ Wide Choice of Outputs — 8 position binary coded octal, 10 position binary coded decimal, 16 position hexadecimal and 8, 10 or 16 position single pole ■ Versatile Application — Available styles include slotted version for screwdriver or coin actuation, plus bar-type knob and thumbwheel versions for hand rotation ■ Economical — Board mounting eliminates need for input/output wiring to perform switching functions ■ Positive Switching — Contacts have positive detent action; all switch positions easily identified by large readable numerals ■ Optimum Reliability — Fully enclosed design protects contact surfaces from dust, dirt and other environmental contaminants

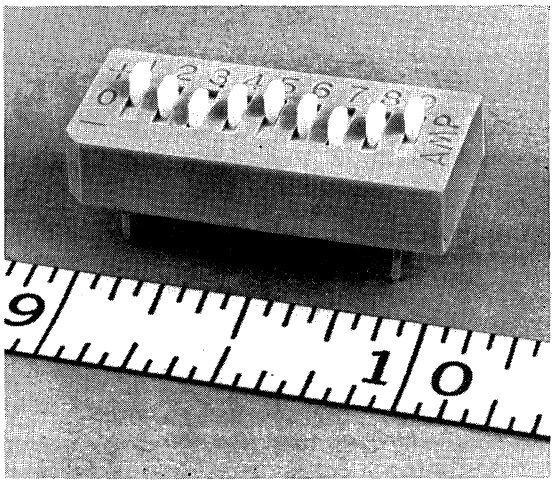
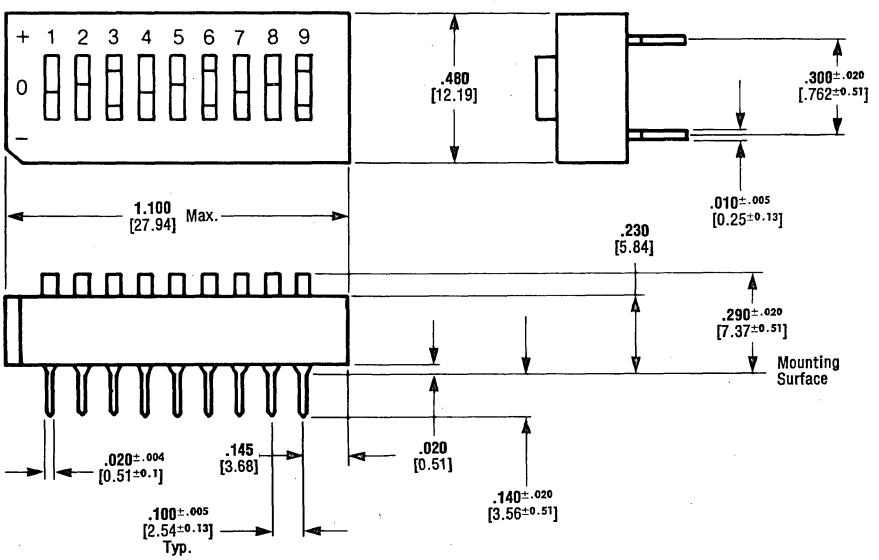
3 x 9 Slide Switch 7800 Series

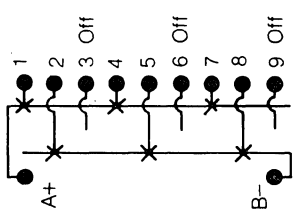


Features

- 9-pole, double throw configuration
- Used for logic level applications or for controlling AC/DC circuits
- Nine separate 3 position slide switches
- Fits .100 x .300 [2.54 x 7.62] centerline standard DIP headers
- Can be soldered directly to pc board
- 19,683 code variations

Part No. 436172-2





Contact Arrangement

Request Catalog No. 80-592

Materials

Case and Base:
Polyester, glass filled

Slide:
Polyester

Spring contacts and Leads:
Copper alloy; plating in accordance with AMP Product Specification 108-7047

Electrical Characteristics

Current Rating:
Nonswitching — 1.5 amperes, max. @ 50 VDC (resistive load), 40°C rise
Switching — 100 milliamperes, max. @ 5 VDC (resistive load); 25 milliamperes, max. @ 24 VDC (resistive load)

Contact Resistance, Dry Circuit:
50 milliohms, max. initial 100 milliohms, max. at end of durability

Temperature Rise (Nonswitching):
40°C, max. from ambient

Insulation Resistance:
1×10^{11}, min. initial
1×10^{9}, min. after environmental testing

Dielectric Withstanding Voltage:
500 VAC, min. @ standard atmospheric conditions

Capacitance:
5 picofarads, max.

Mechanical/Environmental Characteristics

Actuation Force:
10-40 ounces [2.78-5.56 N]

Solderability:
AMP Spec. 109-11-5

Vibration:
10-2000-10 Hz traversed in 20 minutes at .06 inch [1.52 mm] total excursion; AMP Spec. 109-21, Cond. E with 0.1 ampere applied

Shock:
50 G's @ 11 milliseconds AMP Spec. 109-26, Cond. A

Durability:
100 cycles

Terminal Strength:
Pull — 2 lb. [8.9 N] axial
Bend — Two 45° bend cycles

Thermal Shock:
5 nonoperating cycles @ −67°F to +225F° [−55°C to 107°C]

Humidity:
40°C and 95% RH for 96 hr.

Operating Temperature:
−40°F to +190°F
[−40°C to +88°C]

Nonoperating Temperature:
−100°F to +275°F
[−73°C to +135°C]

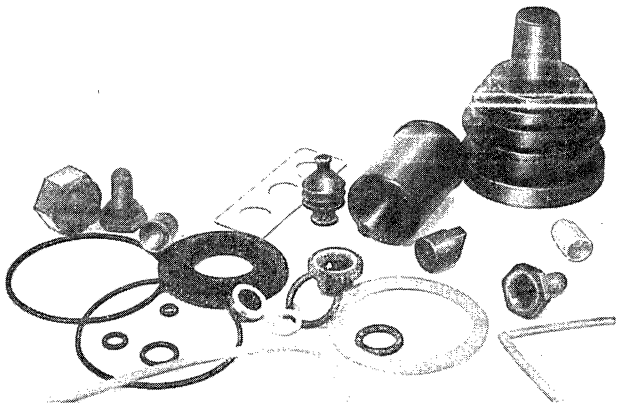
AMP means productivity.

AME SWITCH SEALS



Backed by over 25 years of engineering solutions — for an ever-changing and demanding market.

The wide demand for custom-molded panel and switch seals, threaded inserts bonded to rubber, O-rings, boots and seals, etc., translated is really a demand for talent and know-how to handle the engineering and molding of particularly thorny or unusual custom requirements that frequently plague industry. AME meets the demand. . . with experience, service and unique production techniques.

CUSTOM ENGINEERED PRECISION MOLDED ELASTOMERS

- Color filters for incandescent lamps
- Rubber to metal bonding
- Clear silicone products
- Self-sealing hex nuts
- Self-sealing washers
- Extrusions
- O-rings
- Boots
- Gaskets
- Seals
- Conductive rubber
- Die cutting

TOGGLE SWITCH SEALS

MANY OTHER SIZES AND TYPES AVAILABLE

Pressure capabilities: Internal Pressure
1 Atmosphere, 15 psi (103.4 kPa)
External Pressure
2 Atmospheres, 30 psi (206.8 kPa)
For Part #1106 — Internal pressure
.7 Atmosphere, 10 psi (69 kPa)
External pressure
1.4 Atmospheres, 20 psi (138 kPa)

Endurance: Exceeds 100,000 actuations (depending on environment).

Useful life: 20 years to unlimited (depending on environment).

Switch Seals are designed and manufactured to meet or exceed applicable military specifications.

Switch Seals

An elastomeric boot which seals, thus protecting a switch and internal components against hazardous foreign elements. AME's one piece switch seal is constructed of a flexible rubber boot element bonded during molding to a threaded metal insert that fully encapsulates the switch and bushing to the panel.

This assembly replaces the panel mounting nut and seals the mounting hole making it watertight. It protects against moisture, oil, dirt, dust, most solvents, many acids (see elastomer selection guide).

Switch seals provide vibration resistant mounting and act as double insulation with no interference to switch movement.

CAST URETHANE & SILICONE

AME supplies cast urethane and silicone products precision engineered to meet your most demanding requirements.

If you need high tensile/tear strength, excellent resistance to abrasion and high impact capability, our cast urethane is ideally suited for the job. Superb temperature resistance to the damaging sub-zero cold or searing heat extremes is found in the cast silicone custom engineered by AME Corporation.

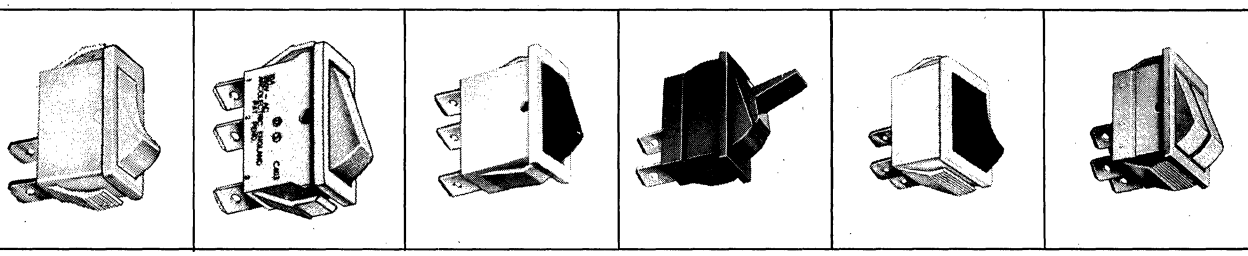
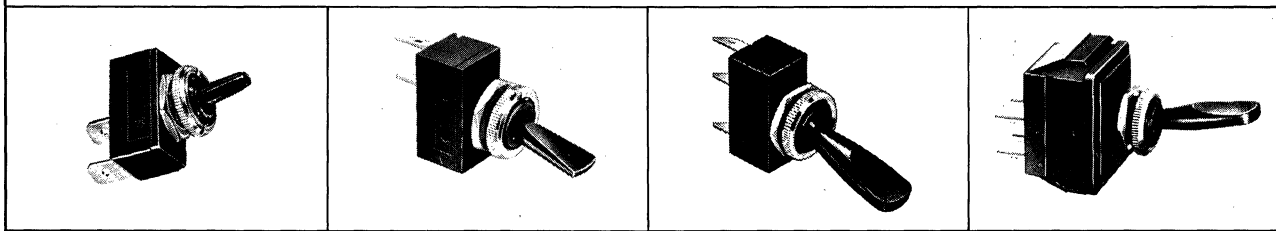
ROCKER SWITCHES



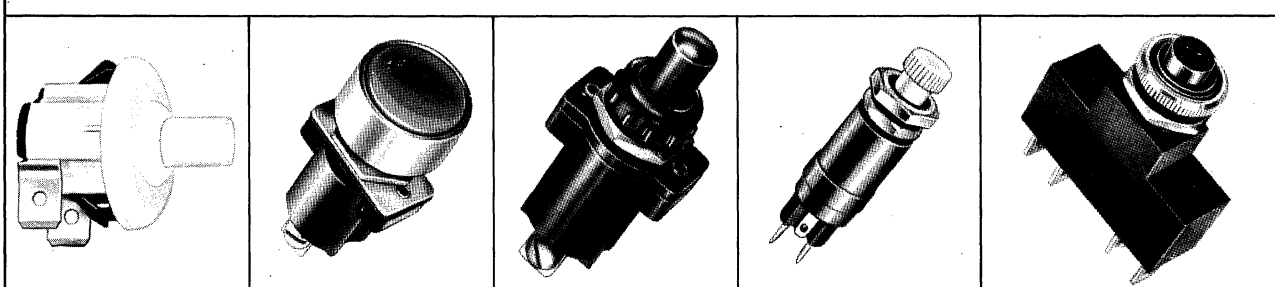
Our extensive range comprised of lighted and non lighted single and double pole, available in 10 Amp and 16 Amp ratings.
Snap in mounting, cut out size requirements:
Single Pole: 12.2 x 27.2(A), 11.0 x 30.0(M), 11.5 x 28.2(Q), 14.0 x 28.5(R)
Double Pole: 22.3 x 27.2(A), 22.0 x 29.4(E), 22.3 x 28.2(Q), All Dia. mm.

LEVER SWITCHES



Silver contact points suitable for low and high amperage circuits up to 10 amps. Some types rated at 15 amps. Variety of lever styles. Lighted 12 volt versions. Standard solder/tab terminals. Mounting Hole: 12.7mm. Single and double pole circuits only.

MOMENTARY PUSHBUTTON



Ratings from ½ amp to 10 amp. Single and double pole circuits.

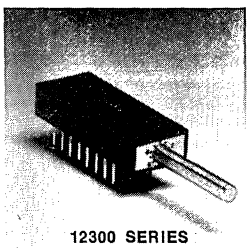
DAVEN SWITCHES

MINIATURE ROTARY AND PCB SWITCHES

BC DIPSWITCH®

Since 1971 Daven switches have featured self-cleaning wiper action, thousands of custom programs, and environmentally sealed switches that enable wave soldering on PC or PW boards.

These and other features are offered in the new DIPSWITCH line.

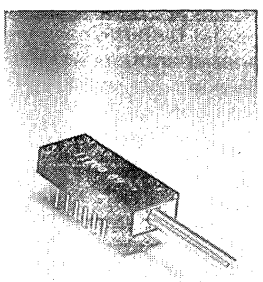


12300 SERIES

16-PIN DIPSWITCH

New 8-pole rotary switch. Application oriented features are:

- ☐ Any combination up to 8 contact closures in any shaft position
- ☐ Coded outputs
- ☐ 1.125″ long, .440″ wide, .232″ high
- ☐ 60°, 45°, 36° indexing

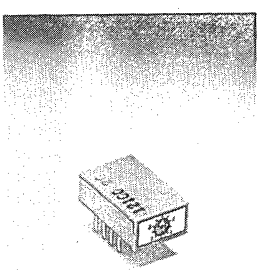


11700 SERIES

14-PIN DIPSWITCH

Versatile 6-pole, 14-pin rotary switches. Application oriented features are:

- ☐ Any combination up to 6 contact closures in any shaft position
- ☐ Coded outputs
- ☐ 35,000 cycle life @ .250 Amp.
- ☐ .995″ long, .440″ wide, .232″ high
- ☐ 60°, 45°, 36° indexing



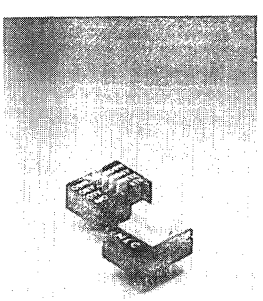
12100 SERIES

8-PIN DIPSWITCH

Versatile 4-pole, 8-pin rotary switches. Application oriented features are:

- ☐ Any combination up to 4 contact closures in any shaft position
- ☐ Coded outputs
- ☐ 35,000 cycle life @ .250 Amp.
- ☐ .730″ long, .440″ wide, .232″ high
- ☐ 60°, 45°, 36° indexing

The 16, 14, and 8 pin switches are available with a bushing mounted front panel adapter.



12000 SERIES

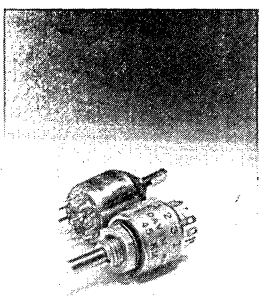
FORM C DIPSWITCH

This 12-pin center-off DIPSWITCH provides four electrically isolated switches, each with distinct center-off positions. Switches may be simultaneously operated with our optional adapter. Low contact capacitance. Less than .5 pf. Ask us how this switch can provide HEXIDECIMAL output. It is truly omnifarious.

G/K ½″ SERIES SWITCHES

Subminiature series G (sealed) and K (unsealed) rotary switches are available in one-pole (2- to 12-position) through four-pole (2- and 3-position) types.

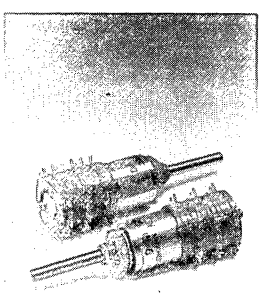
- ☐ Shorting or non-shorting
- ☐ Switching capacity: up to 1 Amp.
- ☐ Indexing: 30°, 36°, 45°, 60°
- ☐ QPL per MIL-S-3786/20E
- ☐ Ideally suited for high shock and vibration applications
- ☐ Contact resistance: .020 ohms max.
- ☐ P/C and solder terminals
- ☐ Mounting hardware supplied
- ☐ Spring Return 36° and 60°
- ☐ BCD Coding 30°



"G/K" SERIES

S SERIES SWITCHES

The S Series provides up to 10 decks, 20 positions per deck (200 poles), in a miniature (¾″ over terminals) bushing mounted rotary switch. Coded Outputs.

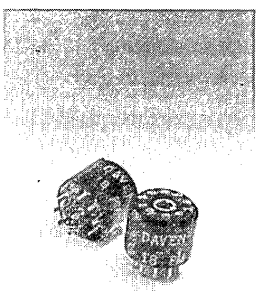


"S" SERIES

P SERIES SWITCHES

Subminiature Series P rotary switches are available in one-pole (up to 10 positions) and two-pole (up to 5 positions) types.

- ☐ Shorting or non-shorting
- ☐ Switching capacity: up to ½ Amp.
- ☐ Indexing: 36°
- ☐ Printed circuit terminals
- ☐ Stop strength: 24 inch ounces
- ☐ Contact resistance: .030 ohms max.
- ☐ Screwdriver operated
- ☐ Sealed for wave soldering



"P" SERIES

FOR MORE INFORMATION

Many standard switches and accessories are available for immediate delivery from stock. Standard switches can be modified quickly and economically by our custom design service to meet special application requirements. Contact our sales department, or your local representative, for application assistance and prices. Detailed information is available in free brochure DCG-0381.

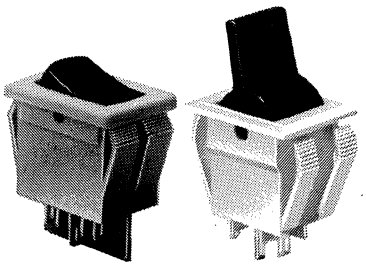
ARMTEC

Armtec is a Bestobell Company

Manchester Municipal Airport Manchester, NH 03103 Tel: 603-669-0940 · TWX: 710-220-1747

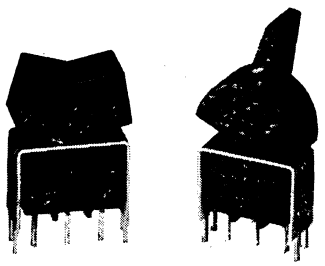
Carlingswitch offers custom quality at catalog prices.

Solving your design problems with quality "standard" and "custom" switching devices is our specialty. We continually lead the industry with new product innovations which incorporate modern materials, innovative styling, patented and patent pending switching mechanisms—all at competitive catalog prices.



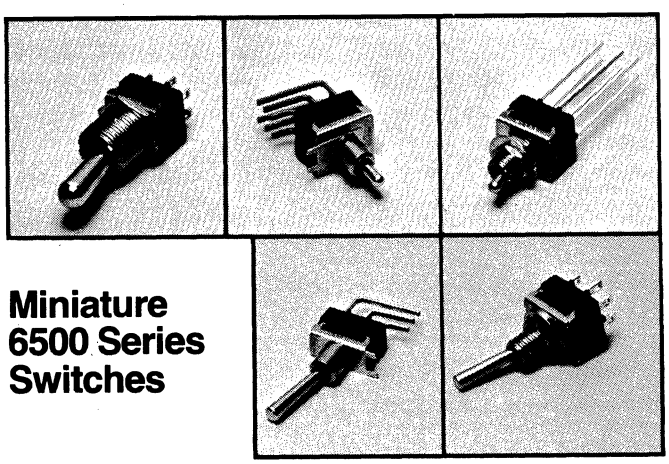
Miniature All-nylon Power Rocker/Paddle Switches

All-nylon miniature rocker and paddle switches offer high reliability, low cost, snap-in mounting, multiple circuit choices, plus ratings for power switching or low level dry circuit switching applications. These attractive switches are available in a wide variety of standard and custom-matched colors. They feature our patented self-cleaning wiping action contacts and are designed to meet European standards.



New Miniature 6600 Series Switches

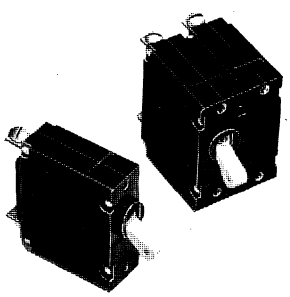
High quality, *low cost* Solder 'n' Wash™ miniatures are ultrasonically sealed, wave solderable and *washable*. They can be soldered directly to pc boards with other components—then the whole assembly can be washed; eliminating extra step of assembling switches separately. Single and double pole models available in toggle, rocker and paddle-actuated models. Bushing mount, straight and right angle pc versions. Static resistant rocker and paddle versions. Many toggle options. All popular ratings available.



Miniature 6500 Series Switches

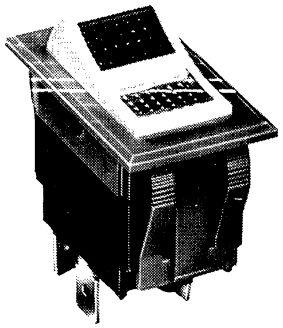
Single and double pole metal-toggle miniatures are well-suited to pc board applications. Variations include: heavy-duty large pinned toggle models with $^{15}/_{32}$" bushing; gold plated pc terminals and contacts for dry circuit use; WIRE-WRAP® terminals with ultra short actuator; right angle pc terminals; built-in front panel splash protection for moist environments. Rocker and paddle-actuated models available. All popular ratings with these high-quality, low-cost switches.

®Gardner-Denver Co. Registered Trademark



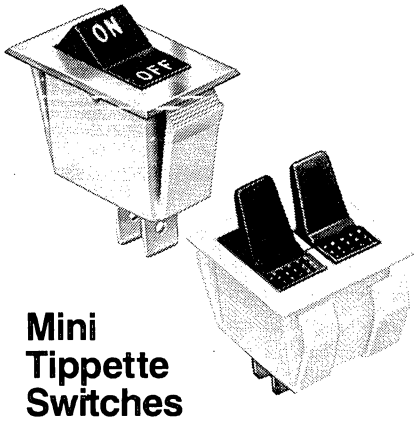
Magnetic Circuit Breakers

Industry-standard magnetic circuit breakers are available in single or multiple-pole configurations with single or multiple actuators. Rated from .100A to 30.0A @ 277VAC and 65VDC (max). Instantaneous, ultra short, short, medium and long time delays; switch only, series, shunt or relay trip circuits. Special color caps available in eight attractive colors. Well-suited for new designs or as direct replacements for competitive protectors.



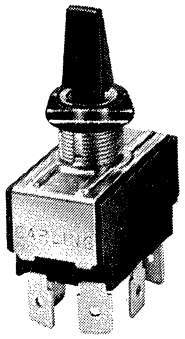
Full Size Tippette® Rocker Switches

Tippette rocker switches are available in an almost endless variety of circuits, current ratings, actuator and bezel styles, mounting brackets and termination types. Other options include legend imprinting, standard or custom-matched bezel and actuator colors. Plus, our patented "Drip Dry" option is an inexpensive way of protecting switch from dirt, moisture and other contaminants. Lighted versions feature single or multiple indicator lights—available with voltages from 6VDC to 240VAC. Will be available in European-approved versions, consult factory.



Mini Tippette Switches

All-nylon low cost insulated switches are tested at full load for 100,000+ cycles. Single or double pole versions offered. All feature convenient snap-in mounting, paddle or rocker actuation. Choose from various current ratings, circuit designs, termination types, colors (standard or custom matches) and legend imprinting. Lighted versions with lamp voltages from 6VDC to 240VAC. Will be available in European-approved versions, consult factory.



Full Size Toggle Switches

These toggle switches are available in one through four poles in ratings up to 20 amps. Single and double pole switches are available with a variety of circuit, termination and actuator variations including an insulated all-nylon model. New lighted versions utilize a translucent actuator which displays three colors to indicate switch positions. Add a neoprene bushing seal that protects against dust and moisture and you have the right switch combination for marine and automotive applications. Will be available in European-approved versions, consult factory.

Catalogs of Value

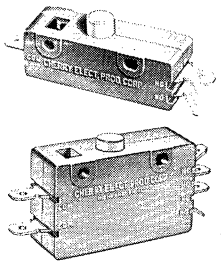
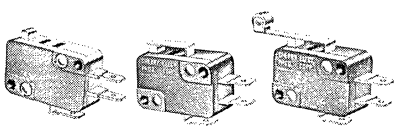
SNAP-ACTION SWITCHES



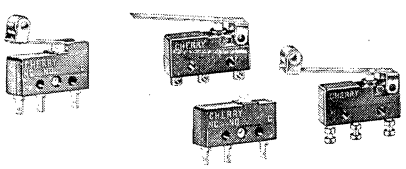
GENERAL PURPOSE

ratings: 0.1, 15, 20, 25A @ 125/250 VAC
circuitry: SPDT, DPDT, SPST, NO or NC, DPST NO or NC
size: 1 13/16" x 41/64" x 41/64" (SP) or 1⅛" (DP)



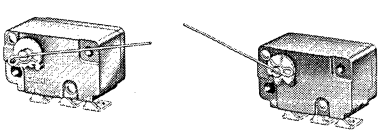
MINIATURE

Standard or light force operation.
ratings: 0.1, 3, 5, 10, 15A @ 125/250 VAC
circuitry: SPDT, SPST, NO or NC
size: 1 3/32" x 13/32" x ⅝"



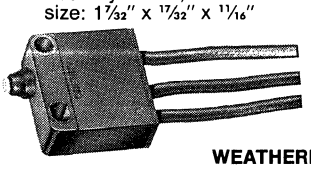
SUBMINIATURE

Standard or light force operation.
Solid base available.
ratings: 0.1, 5, 10.1A @ 125/250 VAC
circuitry: SPDT, SPST NO or NC
Size: 25/32" x ¼" x 23/64"



LOW TORQUE

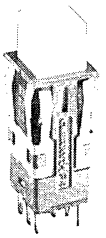
ratings: 0.1, 5A @ 125/250 VAC
circuitry: SPDT, SPST NO or NC
size: 1 7/32" x 17/32" x 1 1/16"



WEATHERPROOF

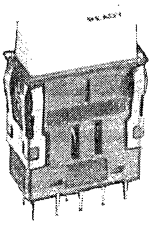
ratings: 0.1, 10.1A @ 125/250 VAC
circuitry: SPDT
size: 0.92" x 0.37" x 0.875"

MODULAR PANEL SWITCHES & ENCODERS



Light or unlighted switches in square (1 x 1) configuration with choice of momentary or alternate action, QC or PCB terminals, rated at choice of 3A @ 125VAC/2A @ 250VAC or 0.1A @ 24VDC.

size: .745" x .745" x 1.83"



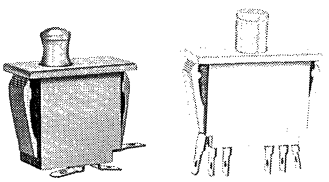
Unique user-programmable 8-bit encoder with choice of 256 different codes. 1 x 2 configuration, base keyed for foolproof PC board orientation.

size: .745" x 1.533" x 1.89"

3-Bit encoder with up to 8 different 3-bit codes, single common.

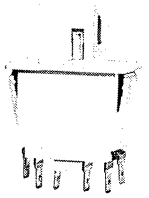
size: .745" x .745" x 1.83"

PANEL MOUNT PUSHBUTTON SNAP-ACTION SWITCHES



Momentary contact, push-pull, push-push and "cheat" interlock available.
ratings: 0.1, 10A @ 125/250 VAC
circuitry: SPDT, SPST NO or NC, DPDT, DPST NO or NC
size: 0.91" (SP) or 1.24" (DP) x 0.54" x 0.97"

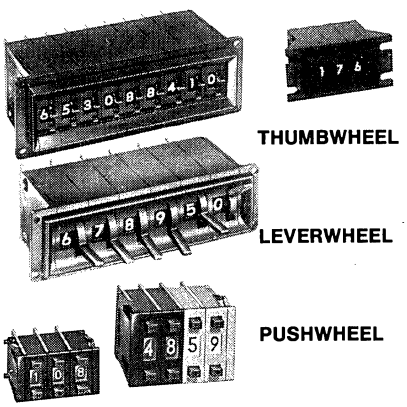
LINE INTERRUPT SWITCHES



Meet worldwide safety specs. Double-make, Double-break contacts.

ratings: 0.1, 10, 16A @ 125/250 VAC combinations
circuitry: form X, Y or Z contacts, 1 or 2 poles
size: 1.24" x 0.524" x 1.075"

SELECTOR SWITCHES



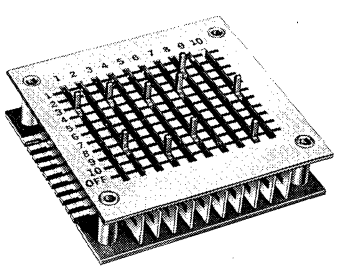
THUMBWHEEL

LEVERWHEEL

PUSHWHEEL

Five sizes from sub-subminiature to industrial for low level switching and encoding. Gangable modules mount front or rear. 8 to 16 positions. Over 75 codes including hex. Pin or PC board termination. Lighted versions available, too.

MATRIX SELECTOR SWITCHES



Eleven standard units from 100 to 2784 crosspoints. Custom modules available.

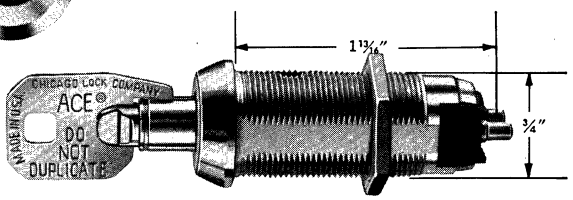
CHERRY ELECTRICAL PRODUCTS CORP. • 3623 Sunset Ave., Waukegan, IL 60087 • 312/578-3500

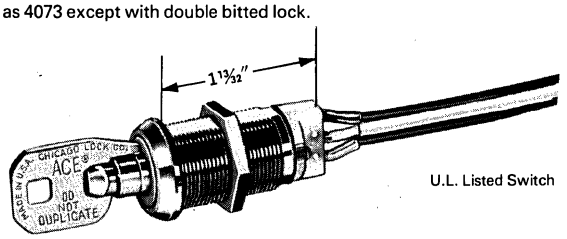
Maximum Security Switch Locks for every application!

Write or call for Switch Lock brochure.

Switch Locks

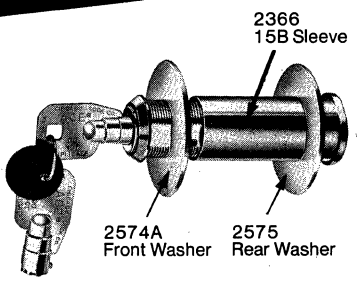


No. 4073—Maintaining contact switch. Key removable "off," "on" or "off-on". Also available as 4073-70 with momentary contact switch. All brass construction. Also offered with die cast outer barrel. No. 2274-80 same as 4073 except with double bitted lock.

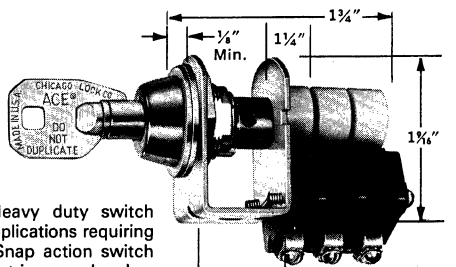


U.L. Listed Switch

No. 4235 — Easy to mount, UL Listed switch SPDT, available with silver plated contacts and 10" wire leads. Offered without 10" leads at reduced cost. Furnished with micro-switch 1SX1-H58.



No. 3039 - SPST switch with adjustable sleeve and washers; dependable wiping contacts. Solder terminals. Lock all brass construction, polished chrome finish. Key removable "off," "on" or "off-on." Also available in die cast outer barrel.

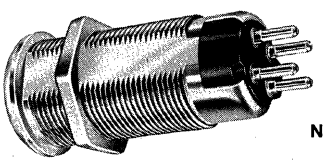


U.L. Listed Switch

UL Micro V3-101

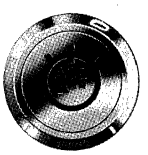
No. EXA-112-3—Heavy duty switch lock designed for applications requiring UL Listed switch. Snap action switch actuated by an eccentric cam when key turned 90 degrees. Multi pole combinations available. Switches are Micro No. V3-101.

SPECIAL APPLICATION — TWO SEPARATE SPST CIRCUITS

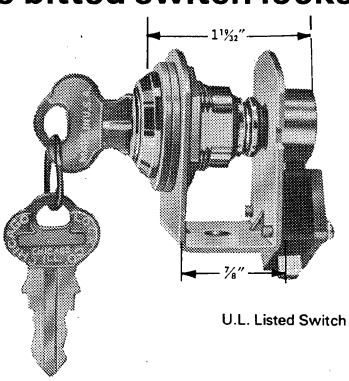


No. 4074

7 Pin Tumbler
ACE II™ Mechanism.
Same as 4073 lock
except with two circuits.

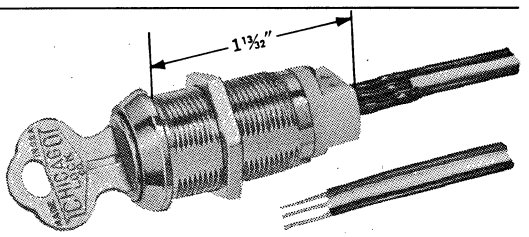


Chicago double bitted switch locks



U.L. Listed Switch

No. EXD-98
Same as EXA-112, except with double bitted cylinder. Designed for high current applications. Multiple pole combinations available. Furnished with micro-switch V3-101.



No. 3535 — UL Listed switch, SPDT. Furnished with silver plated contacts and 10" wire leads. Same as 4235 except has double bitted cylinder. Available without 10" leads at reduced cost. Furnished with micro-switch 1SX1-H58.

Current Ratings	Lock Numbers
*125-250VAC, 5 AMP; 30 VDC, 3 AMP	3535, 4235

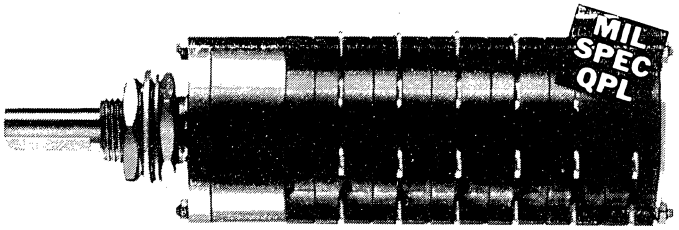
COLE ROTARY SWITCHES



3600 SERIES Miniature Enclosed Rotary Switches

A new custom quality rotary switch. The 1-inch 3600 series enclosed miniature; meets MIL-S-3786. A 6 amp. switch for high-rel use in aircraft controls, electronic test equipment in harsh environments.

Quality? Roller bearing silver contacts. Custom quality? Up to 12 decks, 1 to 6 poles per deck; 30, 36, 45 deg. (8, 10 or 12 position). Options like hermetic enclosure; pre-wired to connector.

TECHNICAL DATA

Listed on QPL to MIL-S-3786, Style SR04.
Certified test reports available

Electrical

Contact Rating
Current carrying: 10 amps @ 28 VDC
Make & Break: 6 amp resistive @ 115 VAC
6 amp resistive @ 28 VDC
3 amp inductive @ 28 VDC
Dielectric Strength: 1500V RMS
Contact Resistance:
Initial .005 ohms max.
Insulation Resistance:
10^5 meg ohms min.

Mechanical

Rotational Torque: 5 in. lbs. max.
Weight: 1.7 ounces + .3 ounces/deck
Life: 100,000 cycles min. mechanical
25,000 cycle min. switching 5 amps @ 120 VAC

1800 SERIES Half-Inch Enclosed Rotary Switches

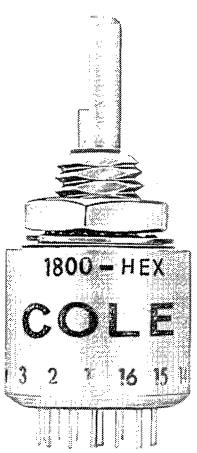
The ultimate in a one half-inch rotary selector switch, the Cole Series 1800 is engineered to meet or exceed applicable MIL-S-3786, Style SR20 requirements.

The Series 1800 enclosed switch was designed for critical ordnance applications, and demanding usage in aircraft, medical and industrial controls and instrumentation, as well as electronic equipment.

This switch is available with 1 pole, 2 to 10 positions, and 2 pole, 2 to 5 positions.

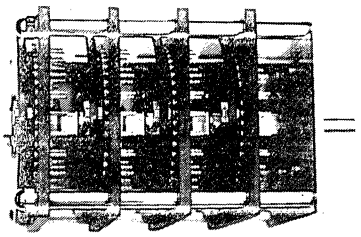
Quality construction, including materials that meet the strictest standards, allows these subminiature switches to combine high current switching capacity with constant low contact resistance. Long life and high reliability are assured by exceedingly stringent inspection and testing procedures.

Available in standard solder lug or printed circuit terminations, the Cole Series 1800 can be furnished with an internal seal. This unique Cole design option renders the switch impervious to water, contaminants and most solvents.



YOUR SOURCE FOR SPECIAL PURPOSE ROTARY SWITCHES

Coded Switches, for direct logic level interfacing
HALF-INCH rotaries, Hexadecimal and BCD code standard, custom codes to your requirements. These are also HI-REL switches, MIL-S-3786 performance.



Instrument Grade, Open Frame Rotary Switches

For heavier current requirements (15 amp continuous; 3 to 5 amp switching.) One MILLION cycles or better life expectancy.

COLE INSTRUMENT CORP.

OUSE-HINDS COMPANY

ARROW HART DIVISION

Crouse-Hinds Company, Arrow Hart Division has a wide range of manual switch products, from heavy duty 60A power toggle switches to dry circuit microminiature pushbuttons. Many of our products are described in literature or can be explained by your nearby Arrow Hart representative. In addition to InterSpec™ switches we offer:

- Internationally-approved miniature Snap-In-Power Rocker Switches (1600/2600 Series)
- New Internationally-approved general purpose AC toggle switches (4000 Series)
- Adapt-a-Switch® illuminated (modular) pushbuttons
- Rotary Keylock power switches
- General-purpose AC and AC/DC toggle switches
- General-purpose AC and AC/DC pushbutton switches
- Heavy duty enclosed/unenclosed AC/DC toggle switches
- Rotary Heater switches
- Slide switches for power tools
- Trigger switches for power tools
- Sump Pump switches
- Military QPL'd full-size and miniature toggle switches

InterSpec™ Switch International Approvals

U.S.A. · Canada · Germany · Switzerland · Sweden · Norway · Denmark · UTE-NF-CCQ France · USE France

InterSpec™ switches offer the widest selection of optional international agency approvals for power applications. **Contact your local representative or the Hartford Product Marketing Department for current approval information.**

Specifications

Specifications are given adjacent to each switch photograph for your convenience. Note also the following applies generally to the switches in this catalog:

TEMPERATURE	
Operating	−40°C to +85°C
Storage	−55°C to +125°C
LIFE	
Electrical	See individual items
Mechanical	100,000 cycles minimum

Specifications are subject to change without notice.

L Series — WASHABLE TOGGLE — single pole — right angle PC terminals — gold plated contacts

SPECIFICATIONS :
* Current/voltage rating :
  max. : 0,4VA 20VAC or DC
  min. : 10μA 5V
* Initial contact resistance : 10mΩ max.
* Life expectancy with resistive nominal load :
  100.000 operations for 2 position
  50.000 operations for 3 position
* Designed for wave soldering and cleaning of PC board

Available in other circuits and styles.

A Fully Modular System

1. **Basic Module:** Enables data input in coded form.
2. **End Caps:** Snap into place to complete module assembly. Complete with 4 panel clips.
3. **Separator:** Used to fit 2 switch assemblies into one unit. They come with 2 clips.
4. **Spacer:** Blank module used to replace a module assembly.
5. **Encoded "Dummy" Module:** Enables a simultaneous switching to two circuits from one digital switch. It is driven by the adjacent module via a coupling shaft.
6. **End Caps:** For rear mounting of module assembly. They come in pairs.

LED Readouts

- Compatible with Crouzet Rocker* and Thumbwheel† switches
- Easy to assemble snap-on modules
- With or without decoding/memory
- Two sizes available

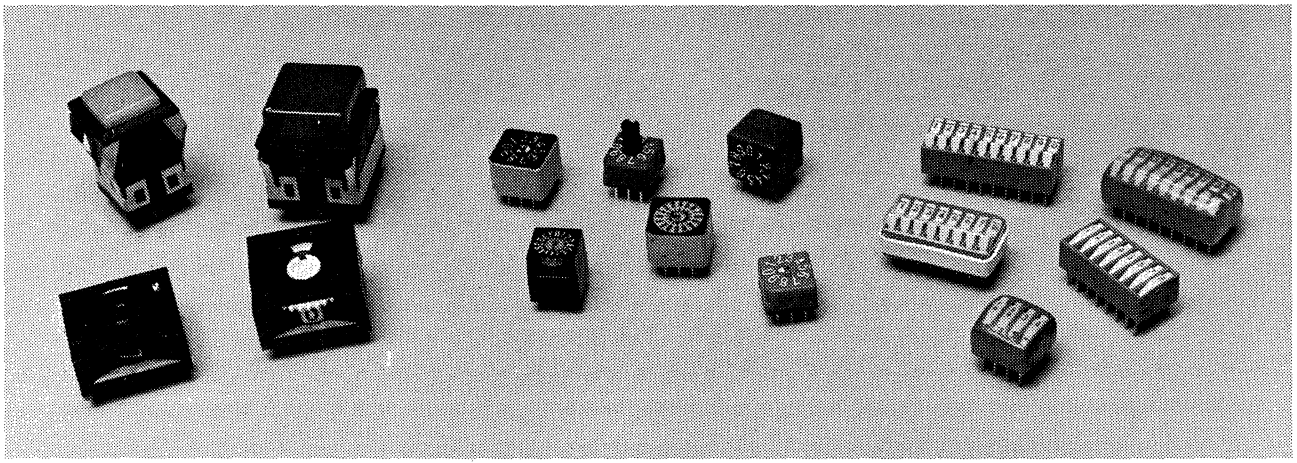
DSA offers a complete line of **MIYAMA** toggle switches, rocker switches, sub-miniature switches, pushbutton switches, lever switches and illuminated switches. **MIYAMA** . . . reliability and quality for over 50 years. For complete information on our wide range of products please contact: **DSA-DAI-ICHI SHOJI OF AMERICA, INC.**

150 Fifth Avenue, Suite 516, New York, NY 10011, (212) 691-9050.

EECO Incorporated PCB Switches



2100/2600 Series STRIPSWITCH™

Mounts directly to printed circuit boards

EECO's 2100 and low profile, standard bottom sealed 2600 STRIPSWITCHES are the most economical method of hand setting coded electronic values available. Requiring a minimum of space and eliminating costly wiring, these switches can be mounted horizontally or vertically on either side of the PC board. Each station can be easily set by thumbwheel or screwdriver, and on the 2100 series, optional extended shaft.

- *One to four stations in a strip (2100)*
- *Two legend locations*
- *10- and 16- position models*
- *Available in all popular codes*
- *Integral mounting pins for stability*
- *No mounting hardware required*
- *Optional color coded rotors*
- *Finished bezel for front panel applications*
- ***One year warranty***

2300 Series MICRO-DIP®

One of the world's smallest binary coded dual-in-line switches

Dip socket or printed circuit board mountable, MICRO-DIP features 10- and 16-position (hexadecimal), 1- and 2-pole models. The 2-pole models offer a separate common to not true bits to eliminate pull-up resistors, and are available with standard bottom seals. All MICRO-DIPs have reliable gold contacts, and their small size/low profile allows high density packaging.

- *10- and 16-position, 1- and 2-pole models*
- *Screwdriver adjustable in either direction*
- *No mounting hardware required*
- *Some models with bottom and process seal*
- *Strong terminals for easy insertion*
- *Available in right angle BCD and extended shaft models*
- *.100" x .300" (2.54 x 7.62) centers*
- *10-position models .400" x .380" x .225" (10.16 x 9.65 x 5.72)*
- *10- and 16-position 2-pole models .450" x .450" x .300" (11.43 x 11.43 x 7.62)*
- **One year warranty**

2400 Series MINI-DIP™

Available in SPST configuration

MINI-DIP, EECO's rocker DIP switch series, offers an optional permanent environmental seal to protect during soldering and cleaning processes, and against harsh operating environments. Exclusive gold-on-gold cleaning/wiping action contacts assure low contact resistance while unique locking rod design prevents accidental actuation. Standard dimensions allow retrofitting of all major brands.

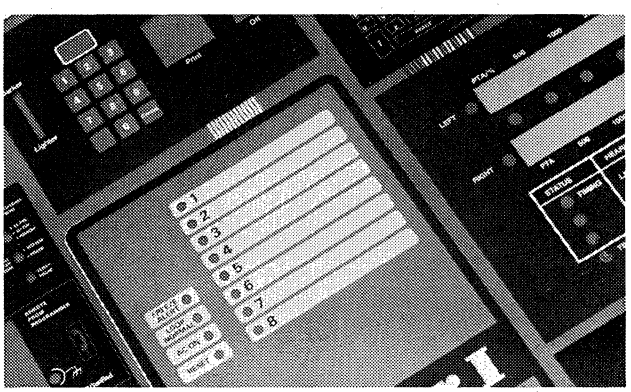
- *SPST, 2-10 stations, raised rocker and low profile*
- *Temporary process seal*
- *Terminals on .100" x .300" (2.54 x 7.62) centers*
- *PCB or DIP socket mountable*
- *Standard bottom seal*
- *Easy-to-read characters*
- *Optional environmental seal*
- ***One year warranty***

2800 Series Lighted Push-Button Switch

Provides high-quality, well-defined illumination

EECO's new lighted push-button switch is available with solder or printed circuit board terminals. For increased operating efficiency, detent life, positive tactile feel and smooth operation, the 2800 Series utilizes conductive rubber at the contact points. Suitable for front panel mounting, this switch is available in 12 mm and 17 mm sizes with high or low profile lens. Ideal for all low-voltage MOS applications.

- *Low profile*
- *Standard base seal*
- *Lamp changes from top with no tools required*
- *Guide grooves for easy station assembly*
- *Snap-in mounting*
- ***One year warranty***



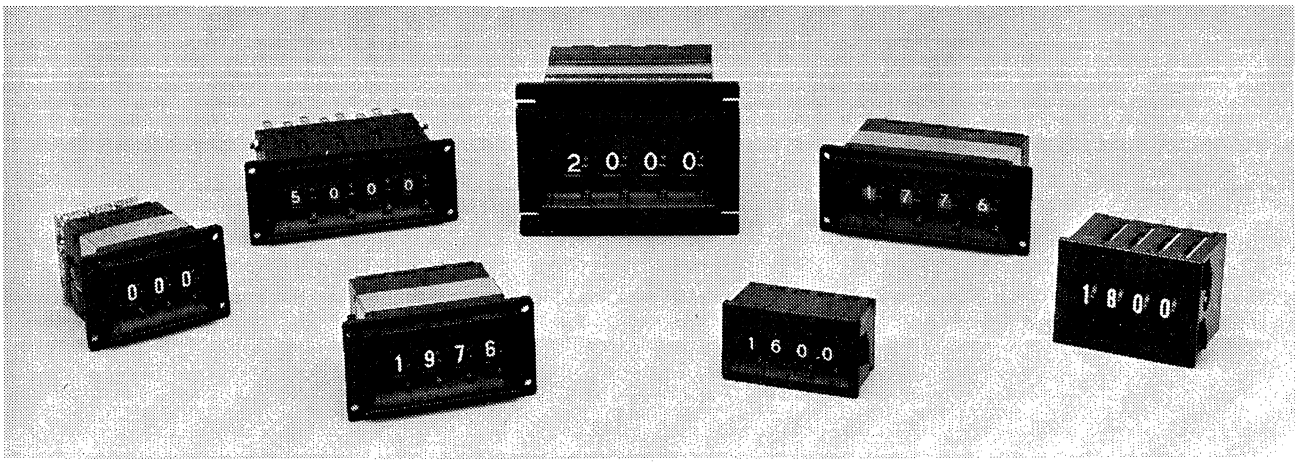
EECOflex® Membrane Switches

Flexible, environmentally sealed keyboard switches

EECO's proven specialty line of custom flexible membrane switches. EECOFLEX is fabricated using photographic screen printing processes which allow virtually any size, shape or color of switch panel or individual switch pad. This state-of-the-art concept enhances appearance and facilitates human interface. Designed for a spectrum of applications from industrial equipment to medical instrumentation, all graphics are printed on the inside surface of the panel's tough outer layer of plastic, safely sealed against dirt and abrasion. EECO's total vertical integration allows for fast order turnaround, while the use of screen printing techniques and steel rule dies make EECOFLEX price competetive.

- *Impervious to moisture, dust, grease, solvents and corrosive gases*
- *Rated for an average life of 10 million actuations*
- *Full-service membrane switch facility*
- *Flat face*
- *Tactile feel*
- *Embossing and read-out windows available*

EECO Incorporated Thumbwheel Switches



Thumbpot

Incremental voltage dividers

The 1976 and 1776 Series Thumbpots offer rapid thumbwheel settings, perfect resettability and large in-line displays.

- *Resolution to .01%*
- *Input resistance: 100 to 100,000 ohms*
- *Available in 1776 and 1976 Series*
- *Optional: lighting, stops and matte finish*
- *Available with fast-mount hardware*
- *Accuracy: 1% to .05% of full scale voltage*
- *Compact behind-panel dimensions*
- *Excellent front panel appearance*
- *Sealed against dust*
- ***One year warranty***

5000/6000 Series

Minature military-type switches

Miniature switches, with field-proven performance, designed to meet the rugged standards of MIL-S-22710/15. 6000 Series is sealed to protect entire contact area from moisture, dust and salt spray. Circuit board, wire cable or wire loop termination available.

- *Optional lighting with long lasting, replaceable lamps*
- *Plastic window readout protection*
- *Over 40 available codes*
- *Field replaceable stops*
- *1,000,000 detent life*
- ***One year warranty***

2000 Series

Industrial/Commercial Switches

A general purpose switch for industrial applications, the 2000 Series offers over 50 codes. Available unsealed or with "O" ring seal, this switch provides fast, "off-the-shelf" solutions to difficult requirements. Removable indicator ring permits easy legend changes in the field. Universal dimensions make retrofit projects easy and inexpensive.

- *Single and double pole models*
- *Lighting available*
- *Optional "O" ring seal available*
- *Field adjustable stops*
- *Provisions for mounting components*
- *Direct wire or connector termination*
- *8, 10, 12 and 16-positions*
- ***One year warranty***

1776/1976 Series

"Revolutionary"

A truly revolutionary design at a nominal price. Optional notched terminals allow switches to be mounted directly to motherboards. The 1776/1976 offer a large selection of codes and its standard dimensions permit ease of retrofitting with other major brands of switches. The 1976 is a slimmer, only .350 (8.89) wide, switch.

- *8, 10, 12 and 16-position models*
- *Optional lighting*
- *Dust seal protection*
- *Provision for mounting components*
- *Stops to limit rotation*
- *1,000,000 detent life*
- *Up to 34 stations per assembly*
- *Double width models*
- *Optional fast-mount hardware*
- *Aluminum wire assembly hardware*
- ***One year warranty***

1800 Series

315" (8.00) wide

A reliable, low cost thumbwheel switch, the 1800 Series switch assemblies offer front, snap-in mounting. Available in 10 position codes, including diode provision, the 1800 Series is offered in three standard housing colors and finishes.

- *Front snap-in mounting*
- *Large, legible .234" (5.94) high characters*
- *Slim .315" (8.00) wide*
- *PCB termination*
- *10-position*
- *Stops to limit rotation*
- *PCB mounting pins available*
- *Available in black, gray or beige*
- *Gloss, matte or textured matte finish*
- ***One year warranty***

1600 Series MINI-THUMBWHEEL

Ideal when front panel space is at a premium

The newest addition, the 1600 Series is also the smallest of EECO's Thumbwheel Switch line. This low cost switch features a snap-together assembly and front snap-in mounting, requiring no tools, and is offered with direct wire or connector termination.

- *Easy-to-read characters*
- *Durable, molded matte finish (standard)*
- *10-position codes available*
- *Low cost snap-together assembly*
- ***One year warranty***

NEW MASTER CATALOG DESCRIBING COMPLETE LINE OF CUTLER-HAMMER COMMERCIAL MINIATURE SWITCHES

The complete line of Cutler-Hammer miniature switches is included in a just published 64 page catalog. Electrical and material specifications, product photographs, dimension drawings, construction details and wiring diagrams provide a thorough description for the variety which includes miniature toggle, rocker, illuminated rocker, keylite, and pushbutton switches. Also included are product summary charts for quick selection of standard switches and a section devoted to custom designed miniature switches. Not happy with your present source? Our catalog even includes complete cross references to our competition.

COMPREHENSIVE PRODUCT BROCHURE

Describing Cutler-Hammer's new Econoswitch line of cost efficient sealed switches.

From rocker action to lever-locks, we have it all, and can provide as standard, many combinations of configurations including:

- One, two and four pole switching
- 16 circuit combinations
- Solder, screw or spade type terminations
- Five actuator styles
- Four mounting methods to suit your application

We call it the Econoswitch line. If your application calls for a switch that's dust proof and water/moisture resistant — but the price of a MIL SPEC switch is prohibitive for you — we have a new answer for you.

Write for this complete brochure NU-161.

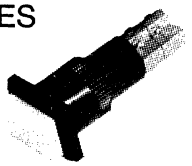
EATON Electrical/Electronic Control

EAO SWITCHES

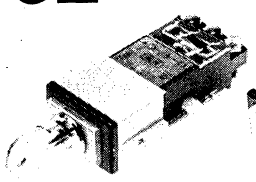
You Can Feel the Difference...

SERIES 01



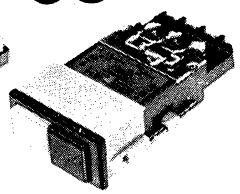
- Round, Square, and Rectangular bezel-front panel mount
- All types mount in a round hole
- 1-4 poles
- Momentary or maintained action
- Maintained action is position indicating
- 2 piece lens cap. Can be separated for insertion of film
- 3 Switching elements—Snap, Low Level, Electronic
- 9 Lens colors
- Front panel replacement of lamps
- Lamps do not travel when the switch is actuated

SERIES 02



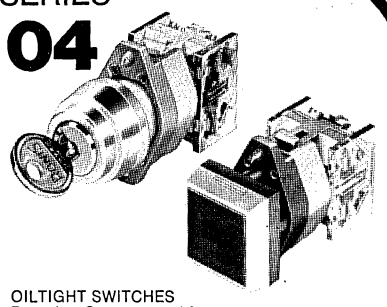
- Double pole, Double throw Momentary or Maintained action on both 380 Volt 10 Amp contacts
- Rectangular lens cap—9 colors
- Key Lock available

SERIES 03



- Full or split display—2 lamp
- Double pole, single or 2 button action
- Momentary, Maintained or combination
- Independent or Interlocked
- Key Switches available

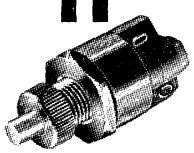
SERIES 04



OILTIGHT SWITCHES

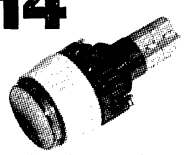
- Round or Square panel front
- Snap together modular design
- Up to 8 pole switching
- Lighted and unlighted pushbuttons
- Mounts in 890" round hole
- Lever, Key-Lock, Emergency Stop actuators

SERIES 11



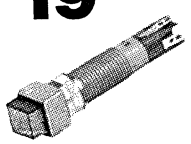
- Round lens cap—6 colors
- Mount from rear of panel
- 1-3 pole switching elements
- Momentary or maintained action
- Lamps replaceable from front
- LED available

SERIES 14



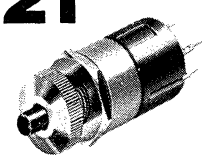
- Combines the rugged design of the 04 oiltight panel seal and the choice of switching elements
  5 Amps 250 volt
  Low level or electronic elements
- Specifically designed for machine tool applications where low level or computer switching is required.
- High-Security Key Lock available

SERIES 19



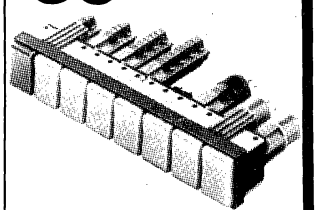
- Miniature lighted pushbuttons & indicators
- 9 mm (.354") centers.
- Round or square bezel
- Low level switching:
  μV up to 60V;
  μA up to 100 mA
- Momentary or maintained action (position indicating)

SERIES 21



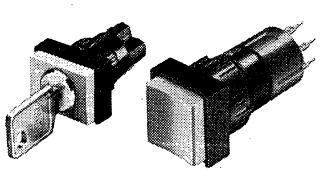
- Non illuminated version of the Series 11 with 6 different colored actuator button.
- Switching Elements
  5 Amp 240 volt 1 to 3 poles
  Low level switch
  Electronic switch Hall effect
- Momentary and maintained (position indicating) action

SERIES 30



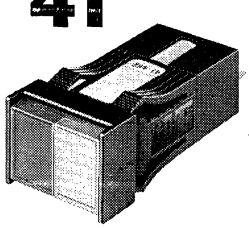
- Mechanical Interlock Switch
- 2—12 Switch units
- 5 different interlock combinations
- Slide Mechanism—All metal construction
- 3 Switching elements—Snap, Low Level, Electronic

SERIES 31/31LL



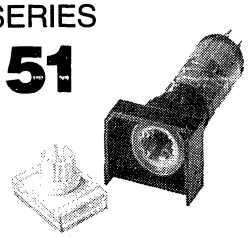
- Square or Rectangular bezel
- Flat or Concave lens
- 1—4 pole snap acting switch, Low Level or Electronic
- Key Lock—round, square, rectangular
- Lamp T-1 ¾ groove base
- Key Lock—round, square, rectangular with 3 levels of security: Low-Cost, Standard and High-Security

SERIES 41



- 2 lamp switch
- Full or split screen
- Same panel dimensions as 31 Series
- Soft mount—from front of panel
- Switching elements same as 31 Series

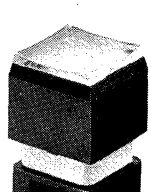
SERIES 51



- Combines style of Series 31 with oil and water tight features of Series 14.
- Integral 'O' ring seal around a special one-piece actuator design to conform to IP65 requirements.
- 1-4 pole, snap acting contacts, low level or electronic switching.
- Round, square and rectangular panel fronts, choice of 8 lens colors.
- High styling and rugged, full seal construction.

SERIES 99

LIGHTED KEYBOARD SWITCH



- Momentary and maintained action
- Gold contacts
- Long life — 5 million operation minimum
- Low level switching — dry circuit
- Low constance resistance — 10 milli-ohms
- Low contact bounce, < 100μ sec

electro-mech
LIGHTED PUSH-BUTTON SWITCHES

DISPLAY ASSEMBLIES/ INTERLOCK SWITCH ASSEMBLIES/INDICATORS

ELECTRO-MECH provides a perfect blend of quality standard products with in-depth experience in answering unique requirements. Proven engineering designs are illustrated by the excellent performance characteristics of each ELECTRO-MECH lighted push-button switch, indicator, and display assembly. Low-bounce, long-life contacts, new innovations in legends, displays, field-service, packaging– all standard features. Whatever your applications, ELECTRO-MECH is prepared to answer your specific needs. Choose from any of the most popular models.

Technical specifications apply to all ELECTRO-MECH Switch models unless otherwise specified:

- **Ratings: 30 Volts DC or 115 Volts AC; 2 amps resistive, 1 amp inductive**
- **Weight: 0.8 oz. (approx.)**
- **Operating Pressure: 2 lbs. + 1 lb.**
- **Plunger Travel: 3/16" (approx.)**
- **Actuations: 100,000**
- **Accommodates all "switchlines" standard lenses. Uses one T1-3/4, AN3140-327, 328, 330 bulb or neon lamp, 3 actuation modes standard**
- **Lenses: Available in ½" to 1" round and square, plus various rectangular sizes.**

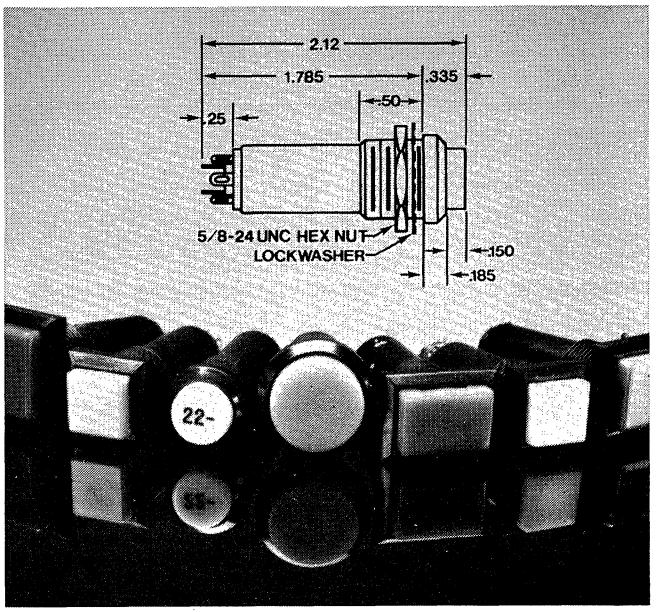
SERIES 20
A NEW CONCEPT OF FAST EASY SWITCH INSTALLATION AND DISPLAY DESIGN VERSATILITY



FEATURES:

- **Momentary or alternate action**
- **Mounts in a ⅝" dia. round hole**
- **High density mounting ability—less than ¾" centers**
- **Low profile appearance in one unitized housing**

ELECTRO-MECH's Series 20 Switches are provided in display configurations.

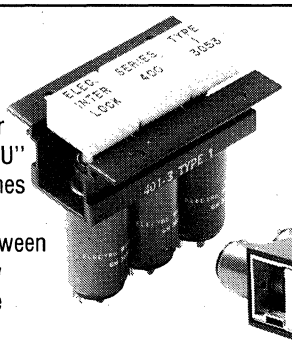
These low profile units are available in any switching mode with independent circuitry from SPST to DPDT including a separate indicator circuit. The all plastic, unitized housing assures ease in handling (no adapters, clamps or brackets). Just drop in round hole and secure with a nut from behind panel.

Series 20 Switches have the same internal parts as the all metal 6100 Series Switches including positive action, reliable circuitry and proven low bounce characteristics made possible by our unique design concept of silver slide bar action.

Available options include gold plating for dry circuit applications. Round slotted nuts for mounting switches on close centers.

SERIES 400
MULTI-STATION SUB-PANEL ASSEMBLIES

Multi-station switch assemblies designed for sub-panel mounting by means of a flanged "U" channel. All standard ELECTRO-MECH switches can be incorporated with several types of mechanical interlocking/lockout actions between stations. Up to 12 stations in one or two row configurations. The standard center distance between switches is ⅝", ¾", ⅞" and 1".



SERIES 500
INTERLOCKING SWITCH ASSEMBLIES

Added beauty and long-lasting appearance with handsome chrome barriers between each switch or indicator. Independent or interlocking action. Ten types of tracking action and switching sequences. Up to 12 switches in single or dual row, ⅞" or 1" centers.

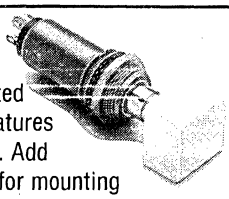
LIGHTED PUSH-BUTTON SWITCHES

COMMUNICATIONS/INDUSTRIAL CONTROLS/DISPLAYS
COMPUTER PERIPHERALS/INSTRUMENTATION

SERIES 2100



This version of our standard illuminated Pushbutton Switch features silver slide bar action. Add BR after part number for mounting on ⅝" centers. Utilizes AN3140-T 1¾"or Neon bulb. All other specifications same as standard.

	1 PST		2 PST		1 N.O.		
	N.O.	N.C.	2 N.O.	2 N.C.	1 N.C.	1 PDT	2 PDT

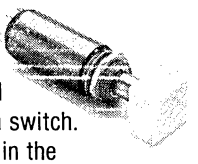
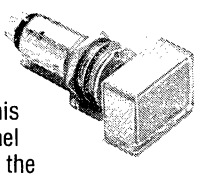
5 PDT	2653	2753	2853	2553
6 PDT	2654	2754	2854	2554

SERIES 3000

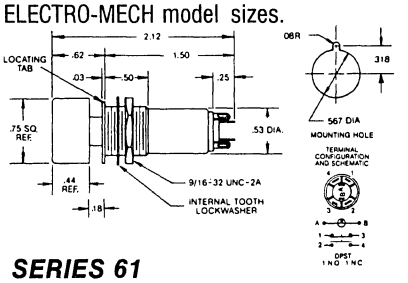


Illuminated Pushbutton switches with an integral hold-down coil which is activated with switch. Holds the push-button in the depressed position until coil is de-energized returning it to relaxed position. Available in all circuit configurations up to 6 PDT. Same specifications as standard model.

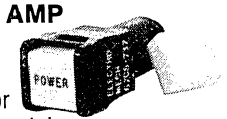
SERIES 6100



High-density packaging requirements are answered with this shorter, front panel mount, providing the same quality design as standard ELECTRO-MECH model sizes.

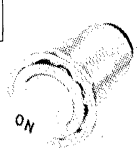


SERIES 4000 10 AMP



Low profile matches standard industry models. Momentary or Alternate Action design takes any standard lens size. 30 VDC or 115 VAC, 10 A Resistive, 5 A Inductive.

SERIES 5000



An exceptionally short momentary switch available in circuit configurations up to 2 PDT.

	1 PST		2 PST

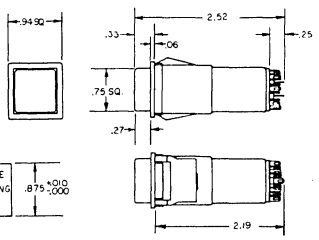
Designer Group Switches

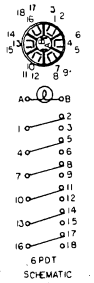
¾" sq., ¾" x 1½", ¾" x ⅞", ½" sq.

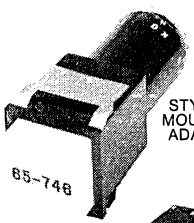
These ELECTRO-MECH Standards feature typical switch functions and mounting options for design flexibility. A choice of dual/quad display units are also available.

All Designer Group units feature:

- **1PST TO 6PDT**
- **Momentary: Alternate action; push-on remain-in; push-on, push-off and momentary snap-feel.**





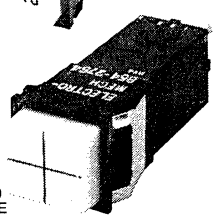


STYLE 65 MOUNTING ADAPTER

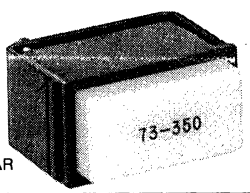
MODEL 65 NO BARRIER

MODEL 68 SINGLE BARRIER (L OR R)

MODEL 67 DOUBLE BARRIER

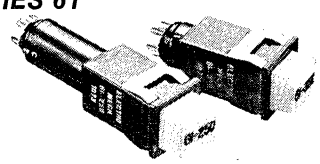


MODEL 600/800 DUAL/QUAD LITE SWITCH



MODEL 73 ¾" x 1½" RECTANGULAR

SERIES 61



ELECTRO-MECH's Series 61 switches are provided in ½-inch square, snap-in or hardmount configurations. Each low-profile unit is available in any function from SPST to 2PDT, each controlled with an independent circuit. The all plastic, unitized housing, helps insulate switch from other surrounding components. The 61 Series is also available in a standard PC Board mounting configuration.

SERIES 60
MOMENTARY SWITCH

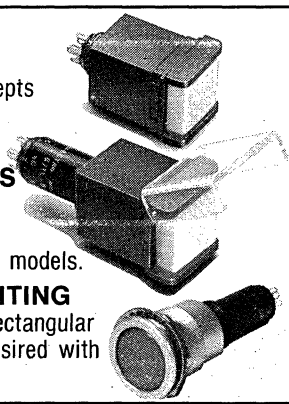
Rear mounted "U" bracket accepts switch installation from front of panel.

LG SERIES SAFETY LENS

Available on all 67-single-station, double-barrier lighted push-button bezel switch models.

EL SERIES FLUSH MOUNTING

Available in round, square or rectangular styles. Specify switch model desired with "EL" suffix (i.e. 73 EL-2654).



SERIES 150
INTERCHANGABLE LENSES/FILTERS

Displays may be changed or buttons replaced. Non-wearing, clear-acrylic lens and filter buttons. Available in standard, Opaque or Contour.

Push Button Switches

Electrical Specification for "TA" Series

All dimensions in inches.

Contact Resistance

Initial / 5 milli ohms max.
After 25,000 cycles / 20 milli ohms max.
Current and Voltage Ratings /
0.5A @ 100 VAC
0.2A @ 250 VAC
1A @ 25 VDC

Dielectric Strength

Contact Gap / 1500 V RMS Min (1 Min.)

Insulation Resistance

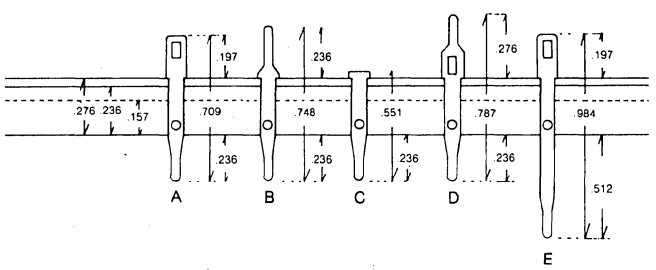
Adjacent Contacts /
2×10^{12} ohms min. (Dry Condition)
3×10^{11} ohms min. (100% Relative Humidity after 96 hours @ 70° F)
Life Test / 100,000 cycles min.

Material List

Desc.: Push Button Switch
Type: "TA" Series

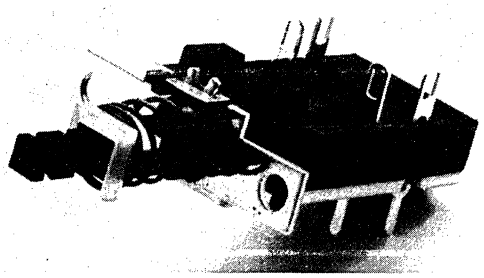
Housing / Polycarbonate (UL 94HB)
Plunger / Duracon (UL 94HB)
Terminal Board / Phenolic & Polycarbonate
(For TA Series) (For NTA Series)
Moving Contacts / Bimetal Brass / Ag Ni
(Sliding Contacts) (0,01 mm, Ag 90%, Ni 10%)
Fixed Contacts / Brass, 0,005 mm with silver plating.
Moving Contact Return Spring / Stainless steel spring
(Sliding Contact Return Spring)
Plunger Return Spring / Baked & Zinc plated steel spring
Alternate Action Staple / Highly resisted steel-wire, Chrome plated
Terminal Die Bond / High strength bonding red resin
Release Bar / Steel / Zinc plated
Chassis / Steel/Nickel plated or Steel/Zinc plated
Release Bar Spring / Stainless Steel

Series "TA" Terminal Configurations Available



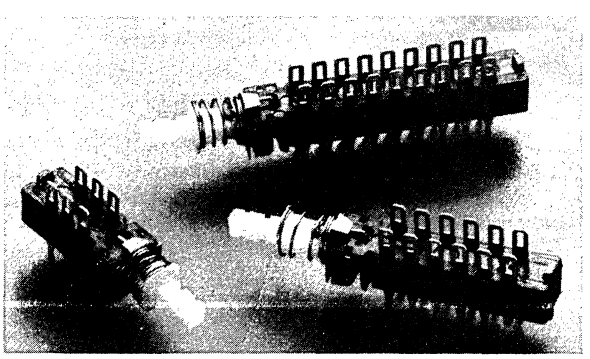
TA/285 Power Switch

VDE, Semko, SEV, Demko, Nemko
UL, CSA 4A/250 V AC



Available as single position mount only.

"TA" Series Alternate Action Modules

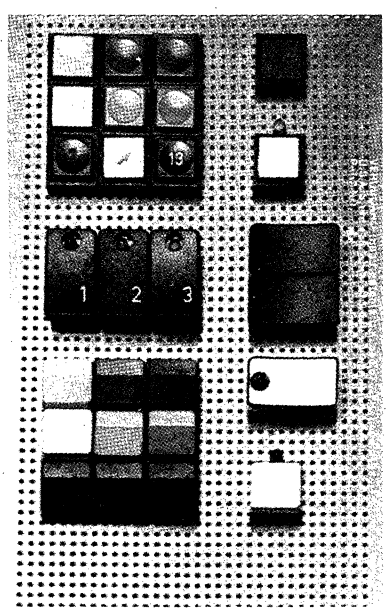


Series 320/323

Type 320 Pushbutton Keys

Single-Pole Momentary Contact

- Pushbutton keys with tactile feel
- Closing switches
  1 input, 1 or 2 outputs
- Changeover switches
  1 input, 1 input, 1 or 2 or 3 output
- Individual keys
  for various types of pulse triggering
  (e.g. electrical interlocking)
- Pushbutton key sets Graduation .492 on Series 323
  for mechanical interlocking, momentary and push-push action
- Variable design
- LED display
  LED sockets can be arranged anywhere.
  Supply without LED
- Single key or keyboard construction
- .010" installation grid
- Specify cap color when ordering
- Standard "TA" series buttons snap on to type 320.02 and 320.03 plungers
- LED not included unless specified separately
- Graphics available — contact factory for details.



Subject to change.

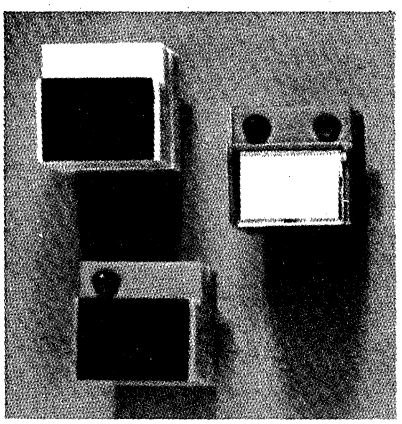
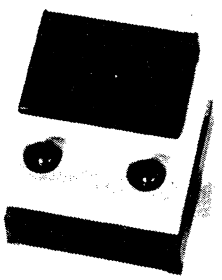
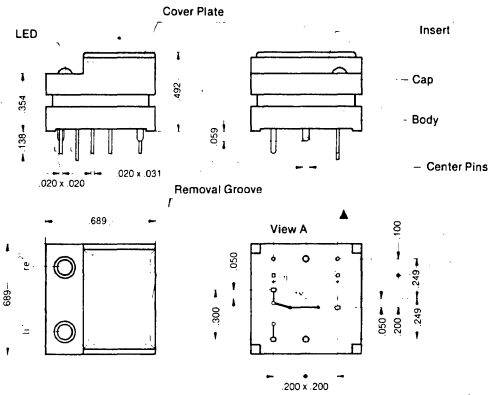
The New "Mini Switches" for Digital Electronics

All dimensions in inches.



Series LDT-11

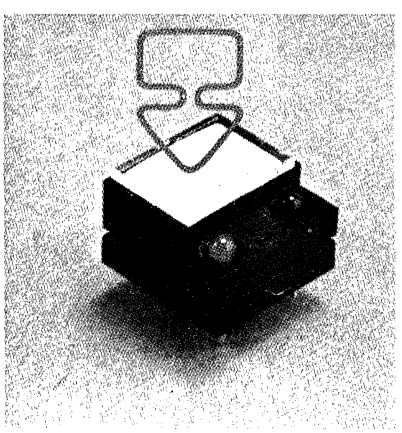




L = LED Pins
TM = Center
1) + = Anode LED
2) = Positions: li = left, re = right, available without or with 1, 2 LED's

Directly Compatible with State-of-the-art Electronics

Two essential advantages extend the scope of application of the Mini-Tast. Together with commercially available IC's, switching functions can easily be achieved, such as mutually excluding, accumulative locking or common release switches. Apart from this, one can feed directly into the electronic circuits by flip-flops.



Feather-Light Switching

Reliability and long life—two major features

- Snap-action contacts—tested to 10 million switching cycles at full load
- Self cleaning contacts—maintenance free
- High quality basic materials—no functional fatigue
- Dust-Proof—by compact design
- LEDs are available from the factory as an option. Please specify as required.

Mechanical Data:

Contact:	1 Form C (SPDT) Momentary
Travel:	1.5 mm
Force:	1.2 N
Life:	$10x10^6$ Operations at Full Load
Temp Range: to DIN 40040:	−25°C to +85°C

Electrical Data:

Max. Switching Voltage:	60 V
Max. Switching Currrent:	250 mA
Max. Switching Power:	15 W resist. load
Bounce Time:	1 ms
Contact Resistance:	20 m OHM
Test Voltage:	500 V AC

Material:

Contacts:	Silvered 10 microns or Gold 3 microns
Body & Cap:	Poly-carbonate

Specification:

LDT 11 □□ . □□□ . □□

CODE FOR CONTACT MATERIAL
0 = Silver, 3 = Gold plated
CODE FOR CAP COLOR
1 = Black, 2 = Grey, 3 = Yellow, 4 = Blue
CODE FOR INSERT
X = No insert, 1 = White,

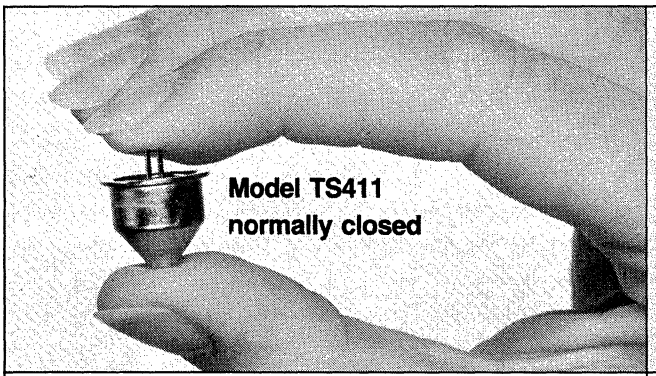
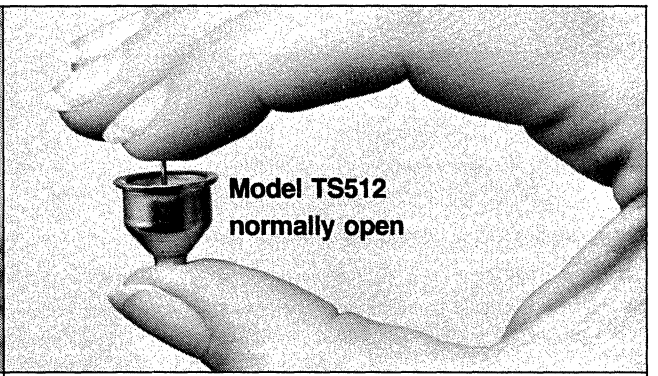
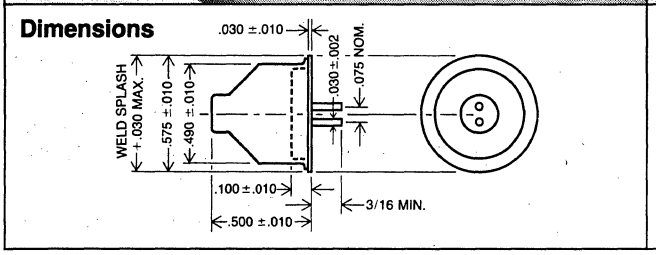
Fifth Dimension Precision Tilt Switches

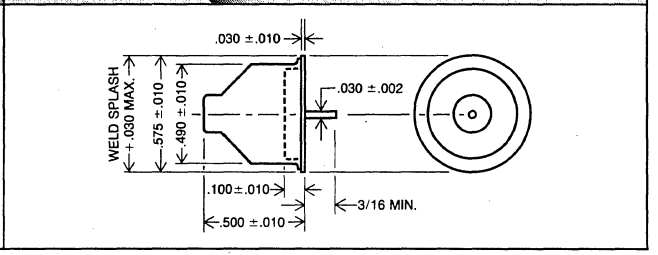
Metal encased miniature tilt switches that operate as closely as ±5° of nominal angle





Dimensions





These rugged, reliable yet inexpensive miniature tilt switches are recommended for applications where operating angle accuracy must be held within tighter limits than most other tilt switches can offer. The Model TS411 normally closed tilt switch exhibits an accuracy of ±5° about its nominal operating angle of 37° (measured from the horizontal). The TS512 tilt switch operates at 35°. Angular accuracy is defined as the angular range over which the contacts of an entire population of tilt switches will open or close.

Both switches measure only 0.575-inches in diameter by 0.512-inches high. Their precise operation is achieved by a unique design. A mercury globule is contained within a well inside the switch. A detent surrounding the well provides a "knife-edge" action (patent applied for). As the switch is tilted, the mercury remains in the detent until the operating angle is reached. The globule then flips over the lip of the detent, providing a highly repeatable "snap action" mode of operation.

The contacts of the TS411 are mercury wetted to provide exceptionally low contact resistance. Typical contact resistance for this switch is 0.025 ohms.

Houses in a rugged welded steel capsule, these switches, unlike fragile glass enclosed types, withstand rough handling and mechanical shock. Low contact resistance permits reliable switching of low-level loads. The contacts are sealed in an oxygen-free atmosphere to prevent mercury wetting the walls of the switch or other oxygen-related failure mechanisms.

These switches can be modified to operate at your desired nominal operating angles with only a small change in tooling. Ask for more information.

Specifications

Contact Form	Degrees from Horizontal (Glass seal up)	
	Normally Closed/Model TS411	Normally Open/Model TS512
Contacts May Open	42°	25°
Contacts Must Open	32°	55°
Contacts May Close	38°	50°
Contacts Must Close	52°	20°

	Model TS411	Model TS512
Load Current @ 115 VAC (Amperes)	1.0	1.0
Load Current @ 12 VDC (Amperes)	2.0	2.0
Contact Resistance Typical (Ohms)	0.025	1.0
Operational Temperature Range (°C)	−38; +85	−38; +85

Gould R.B.Denison Optic-Electronic Switches

Features:

- **Long Range Sensing** — As far as 100 feet.
- **Versatile** — Retroreflective, proximity, thru beam and point focus.
- **Reliable** — Solid state infrared electronics.
- **Rapid Response** — As fast as 10k Hz switching.
- **Over 75 Models** — Compact, self-contained for down-sized machinery.
- **Applications** — For package detection, bar code reading, breakage and color registration.

Introduction

The types and usage of optic-electronic control applications are increasing at a very rapid rate. This is because optic-electronic controls are extremely versatile and becoming a widely applied method of electric control in industry today.

They can be used to detect the presence or absence of nearly any material or object without contacting it physically, and can function even at a considerable distance from the object to be detected. Optic-electronics are extremely reliable and have rapid response times. This is due to their solid state design, plus no-touch actuation, which results in long, low-cost operation.

Description

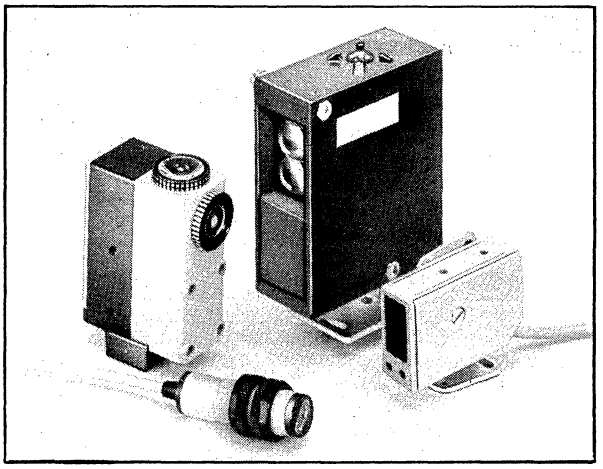
There are two kinds of optic-electronic devices used in photoelectric applications — those which give off light (emitters) and those which receive light (receivers). The emitters give off light when an electric current is passed through them. The receivers change one of their characteristics when light falls upon them.

The classical emitter is the incandescent lamp, which emits electromagnetic radiation over nearly all of the visible range. The light which is given off is continuous, but for some applications may be modulated by a mechanical shutter.

Solid state components made from gallium arsenide (Ga-As) may be caused to emit light in the infrared region. This light can be modulated easily by electrical means and the point source of the light greatly simplifies the optical system.

Modulated LED controls are optic-electronic controls that can be applied in variable or bright ambient light, low visibility scanning conditions, and also in high vibration areas. A modulated LED control is the only type of optic-electronic control recommended for use outdoors, where it is exposed to sunlight and variable weather conditions.

The modulated LED control operates on a pulsed (modulated) infrared beam emitted by an LED. Since the receiver circuitry is tuned to the emitter modulating frequency, the control does not respond to ambient light. Modulation frequency causes the control to respond rather than beam intensity. Controls may be modulated at different frequencies. This prohibits using the emitter of one control with the receivers of the others.



Scanning Techniques

There are several scanning methods for setting up the light source and photoreceiver to detect objects. Use the one that yields the highest signal ratio for the object to be scanned, subject to distance and mounting restrictions.

Various characteristics of objects to be detected have a bearing on the scan method, such as whether the objects are: (1) translucent or opaque; (2) slightly or highly reflective; (3) in the same position or random as they pass the sensor. Detecting change in color requires special considerations.

Methods of Detection

Reflex (retroreflective) — A method of object detection in which the emitter and receiver are located on the same side. A reflector on the far side returns the energy from the emitter to the receiver. Operation is accomplished by interruption of the beam. The sensor then detects the presence or absence of its own reflected beam.

Proximity (direct detection) — A method of object detection in which the emitter and receiver are located on the same side. The receiver senses energy from the emitter, which is bounced back by the object being detected.

Emitter-Receiver (thru-beam) — Utilizes a separate opposing emitter and receiver. Detection is accomplished by interruption of the modulated infrared beam.

Point Focus (fixed range detection) — A method of object detection in which the emitter and receiver are located on the same side. The receiver senses energy from the emitter, which is bounced back by the object being detected, but only when the object is at a fixed distance from the sensor.

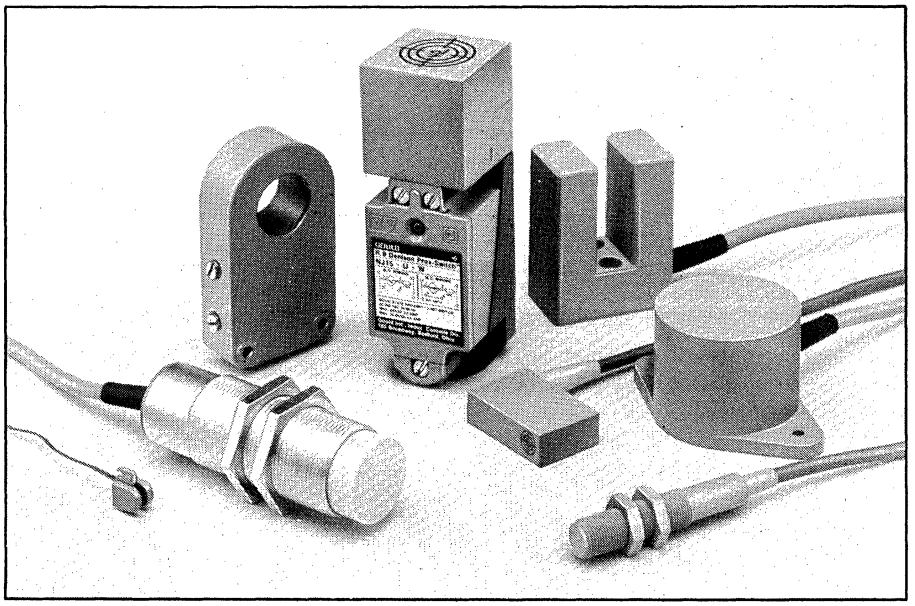
GOULD
Electronics

Gould R.B.Denison Proximity Sensors

Features

- Metal detection (ferrous, non-ferrous, foils)
- Solid material, granular material and liquid detection (glass, wood, paper, oil, water, flour, etc.)
- No moving parts (solid state)
- Completely sealed and waterproof
- Non-magnetic
- Accurate positional switching
- Shielded models (not side sensitive)
- Fast switching speeds

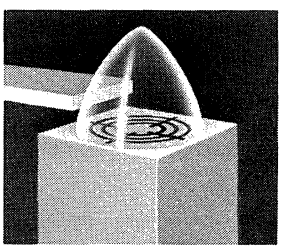


Application

Wherever high switching accuracy and/or high reliability is essential, Prox-Switch inductive proximity switches provide the ideal answer. They detect the presence or absence of metal cams or parts without making physical contact. The metal to be detected, which may be ferrous or non-ferrous, need only to enter or leave the detection area to operate the switch. This method has obvious advantages over mechanically operated limit switches because there are no moving parts to corrode or wear out; and the useful life span is, therefore, many times greater.

As the sensor does not touch the metal being sensed and is non-magnetic, it is also ideal for use on meter movements, weighing machines and delicate mechanisms such as impellers used in flow measurement.

Operation



Sensed metal objects can be stationary or in motion and can approach the proximity sensor from any direction.

The inductive proximity sensor uses an r-f oscillator located in the sensing head. When no metal is present, a small r-f field radiates from the sensing head, and the oscillator functions normally. When in the field of the sensing head, metal absorbs r-f energy. This lowers the activity of the oscillator circuit and causes an output device to switch the load.

Proximity System Elements

The proximity system consists of three basic elements: a sensing oscillator, a solid state amplifier and a switching device. All three elements can be self-contained in one sensor; or just the sensing oscillator can be located separately and the solid state amplifier and switching device built into a control amplifier.

Proximity Sensor With Control Amplifier

- All sensors may be used
- Sensors operate at 8 VDC
- Sensor connects to control amplifier or electronic terminal with choice of hard contact relay, triac or transistor outputs
- Amplifiers may be selected with a variety of options such as on/off, delay timing, under/over rpm control, synchronization, and/or switching, etc.
- Instrinsically safe systems for Class I, Division I, Groups A, B, C, D and Class II Division I, Groups E, F,G.

Self-Contained Proximity Sensor

- Most sensors may be used
- Sensors operate at load voltage
- Sensor connects directly to load — no intermediate control amplifier.
- Sensors with AC outputs can be electrically interchanged with mechanical limit switches. Sensors are designed to switch programmable controllers or relay loads.
- Sensors with DC outputs are designed for direct interface into logic, processors and controllers.

GOULD *Electronics*

Gould R.B.Denison Heavy Duty Limit Switches

Features

- 4-position indexing head
- Plug-in and non-plug-in models directly interchangeable
- 50,000,000 life cycles plus*
- NEMA 1, 4, and 13 housings
- Heavy duty electrical ratings

*exceeds automotive test standards

Options

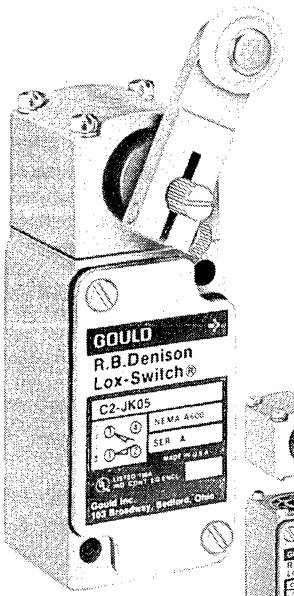
Wide choice of options for lever, plunger and omnidirectional models

- Neon pilot light to indicate switch operation
- Low temperature models to -40°F (-40°C)
- 3/4" conduit entrance
- Viton elastomers for fire-resistant fluids
- Gold impregnated contacts
- Hermetically sealed reed switching
- Solid state triac switching
- Epoxy sealed switch compartments
- Prewired with individual conductors
- Prewired with multiconductor cable
- Prewired with mini-change receptacle
- Manifold mounting

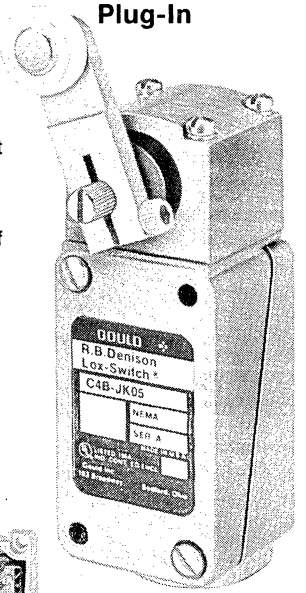
UL LISTED IND. CONT. EQ-196A

CSA® File No. 16565

Non-Plug-In



Plug-In



Modular Construction

Non-plug-in models consist of a separate base and head. Plug-in models consist of a separate base (wiring receptacle), top half plug-in (electrical compartment) and the head. THE HEADS ARE INTERCHANGEABLE BETWEEN NON-PLUG-IN AND PLUG-IN MODELS.

HOW TO ORDER A REED SWITCH

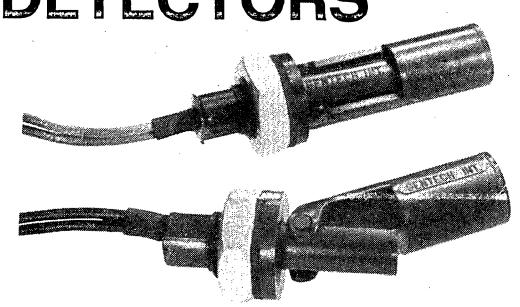
Gordos reed switches must be ordered by stating the REED SWITCH PART NUMBER (Example: MR5203) followed by the desired PULL-IN SENSITIVITY RANGE (AMPERE-TURN RANGE) (Example: 15-35 ampere turns). PULL-IN SENSITIVITY of a reed switch is measured in ampere-turns (AT). AT is the product of the current flowing in a coil and the number of turns of wire in that coil, measured at the point of "just operate" for the Reed Switch. It is very important to specify the desired AT range when ordering a Reed Switch.

There may be a delivery and price advantage to ordering a broader AT range (Example: delivery and price may be better for 15/35AT than for 15/20AT). Reed Switches are normally grouped in multiples of five ampere-turns within the stock ampere-turn range.

CUSTOM PRODUCTS

Gordos mercury switches, and custom products are produced by one manufacturing division with extensive experience in packaging its own products as well as Gordos magnetic reed switches. Together, these capabilities have permitted Gordos to provide applications engineering consultations, unique solutions, and custom products to leaders in the automotive, security, photocopy, and instrument industries for years.

FLUID LEVEL DETECTORS



DESIGN FEATURES

- Made from heat stabilized, glass filled nylon
- Switch rating up to 100 VA
- Normally open or normally closed action
- Easy to install
- Inexpensive
- Reed switch reliability

APPLICATIONS

- Low coolant level detection
- Fuel or oil level indication
- Boiler level control
- Chemical solution monitoring
- Domestic appliances

PART NUMBER

- FH4A-000 Metal nut; lead is .5 meters
- FH4A-003 Nylon nut; lead is .5 meters
- FH4A-004 Metal nut; specify lead length

OTHER PRODUCTS

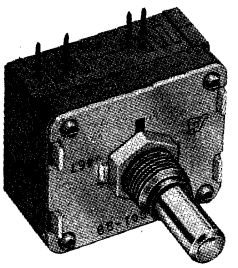
- Reed switch assemblies
- Mercury switch assemblies
- Reed relay assemblies
- Solid state relay assemblies
- Bus compatible I/O Interface Cards
- Proximity sensors

STANDARD GRIGSBY

SUB-MINIATURE P/REL

A GORDOS INTERNATIONAL Company

SUBMINIATURE PROGRAMMABLE ROTARY ENCODED LOGIC SWITCH



NOW AVAILABLE THROUGH YOUR LOCAL GORDOS AUTHORIZED DISTRIBUTOR

- Make before break
- Printed circuit or solder terminals
- Adjustable stop at the rear is available (please specify)

The compact subminiature programmable rotary encoded logic switch (P/REL) is now available in 16 and 32 position binary or gray code.

DUAL FLEX™ DETENT

The Dual Flex detent has a dual ball starwheel drive to provide positive indexing and longer life, tactile feedback and resistance to teasing.

ELECTRICAL RATINGS

Current Carrying Capacity — .25 amp
Resistive Load Switching — .125 amp @ 115 AC
Contact Resistance — initial 0.1 ohm maximum
Insulation Resistance — 100 megohms
Dielectric Strength — 500 VAC minimum
Contact Life — 25K cycles of 720° minimum (50K cycles of 360° minimum)
Operating Force — 14 to 24 inch oz. standard
Temperature Ranges — −55°C to +85°C
Insulation — Molded Valox 310
Programmable Disc — Plated copper clad laminate
Contacts — Plated spring tempered material
Front Plate and Shaft — Cold rolled steel cadmium plated
Bushing — Die cast zinc or aluminum

Part Number	Description

CUSTOM PRODUCTS

Gordos mercury switches, and custom products are produced by one manufacturing division with extensive experience in packaging its own products as well as Gordos magnetic reed switches. Together, these capabilities have permitted Gordos to provide applications engineering consultations, unique solutions, and custom products to leaders in the automotive, security, photocopy, and instrument industries for years.

GENERAL TECHNICAL DATA AND RELATED INFORMATION

General Features
The **"Green Devil"** line of mercury tilt switches feature silent operation, excellent bounce-free switching characteristics, and small size. Due to the fact that they are automatically produced in large volumes, their **cost is significantly less** than other techniques of tilt angle detection. The mercury switching medium is sealed in an inert atmosphere and has proven its reliability in millions of applications.

Differential Angle
The **differential angle** is measured from the position "just closed." It is the tilt angle required in order to move the mercury away from the electrodes so that the position "just opened" is achieved.

The **operating angle**, i.e. the angle by which the switch has to be tilted in order to assure operation, always has to be relatively larger. In general, 1.5 to 2 times the differential angle is sufficient.

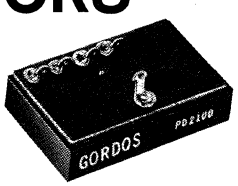
Contact Forms
Depending on the starting position, all switches with the exception of type **HG 3903**, can be used as normally open (Form A) or normally closed (Form B). Switch type **HG 3903** is a single pole — double throw (Form C).

Connecting Leads and Encapsulated Switches
The standard switches specified above have no connecting leads or wires — other than the terminals shown. However, all switches can be supplied with connecting leads as per customer specification. Highly flexible connecting leads with PVC insulation or any other suitable wire can be used. Our mercury switches normally require no further encapsulating. However, customer assembly procedures and methods will sometimes require protection of the glass body. In these cases we design and produce switches built into **metal** or **plastic tubes** and encapsulated with an **epoxy resin.**

Our engineers are ready to answer any questions you may have regarding the application or the installation of our Mercuty Tilt Switches.

LEVEL SENSORS

FOR ABSOLUTE LEVEL DETECTION OF RECREATIONAL VEHICLES, MOBILE HOMES, X-RAY TABLES, APPLIANCE INSTALLATIONS AND ANY OTHER APPLICATION WHERE LEVELING IS CRITICAL



Gordos mercury actuated sensors are compact; plastic encapsulated for complete environmental immunity; and exhibit all the qualities of fine instruments.

Consisting of a series of sensitive mercury tilt switches, these devices accurately reflect tilt or out of level conditions in 2 or 4 directions.

Three models permit a wide range of applications; the PD2100 and 2105 are one amp devices with sensitivities of less than 2°; the PD2110 will switch up to 10A.

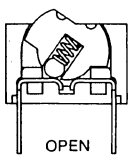
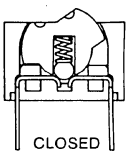
DIP Switches

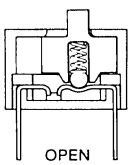
Another Difference from the Different DIP Switch Company . . .

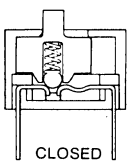
Exclusive Contact System:





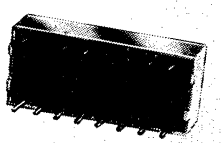
- Now available in Rockers *AND* Slide Actuators





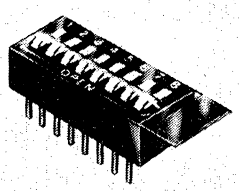
Unique spring-loaded ball contact system provides high contact pressure for reliable contact and shock and vibration immunity. It also provides exceptional mechanical and electrical life.

Complete Seal



After being wave soldered, your printed circuit boards can be vapor, spray or immersion cleaned without damaging switch contacts.

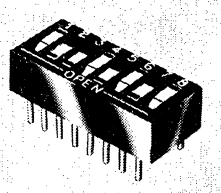
- Epoxy Potted Bottom Is Standard
- Top Seal Available At Minimum Additional Price



Military Qualified

Another difference from the different DIP Switch Company . . . Grayhill SPST Rocker DIP Switches are qualified to military specifications MS83504/1 and MS83504/2.

And more . . .



Grayhill can also provide position location markings, rigid protective covers, and cards of tape seal. Contact Grayhill.

Specifications—Series 76 and 78

For Series 79 Specifications, see Binary Code DIP Switch page.

RATING

Mechanical Life: (Operations per position): For Series 76—50,000; for Series 78—35,000.

Make and Break Current Rating: At 50 mA and 30 VDC, Series 76 Switches—35,000 operations; Series 78 Switches—25,000 operations. At 125 mA and 30 VDC, Series 76 Switches—25,000 operations; Series 78 Switches—15,000 operations.

Contact Resistance: 100 Milliohms Maximum after life (30 Milliohms initially), measured at 10 mA DC and 50 mV (open circuit).

Insulation Resistance: (at 100 VDC): Between Adjacent Closed Contacts: 1,000 Megohms Minimum after life, (5,000 Megohms initially). Across Open Switch Contacts: 1,000 Megohms Minimum after life, (5,000 Megohms initially).

Dielectric Strength: Between Adjacent Closed Contacts: 500 VAC after life (750 VAC initially). Across Open Switch Contacts: 500 VAC after life (750 VAC initially).

Current Carry Rating: With a maximum contact temperature rise of 20°C.: Series 78—5 Amps; Series 78—4 Amps.

MATERIALS AND FINISHES

Switch Cover, Rocker and Base: Polyester.

Shorting Bar (Ball): Brass, Gold plated .00001″ minimum over Nickel plate.

Base Contacts: Brass, Gold plated .00001″ minimum over Nickel plate.

Terminals: Brass, Tin plated .00005″ minimum over Nickel plate.

Potting Material: Epoxy.

Optional Contact Plating: Gold thicknesses of .00003″ and .0001″ are also available on Series 78 Switches.

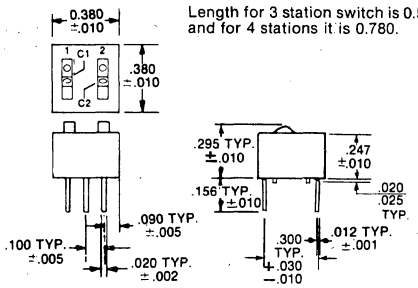
SPDT DIP Switches

Rockers and Toggles—Series 76

The DIP-C™

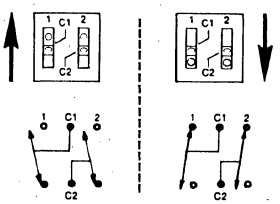
True Form "C" Switching.



Length for 3 station switch is 0.580 and for 4 stations it is 0.780.

Typical Circuit Diagram

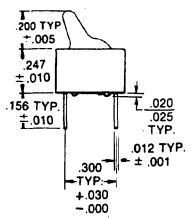
As viewed from top of switch



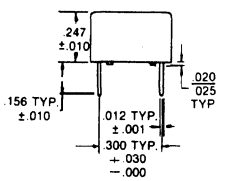
● indicates closed contact
○ indicates open contact

The TOGGLE-DIP™

For easy actuation in front panel applications.



End view recessed rocker



Slide Actuated—Series 78

All Series 78 double throw switches have alternately opposed circuits which are actually 2 completely separate circuit paths. A single slide actuates both circuits thus providing double throw. True double-throw circuitry is achieved by tying selected terminals on the PC board for a common. The "on" position of each circuit is indicated by a dot on the cover. Note: Some switches of an earlier production version have externally tied actuators; drawings and dimensions may be found in Bulletin Number 328—contact Grayhill.

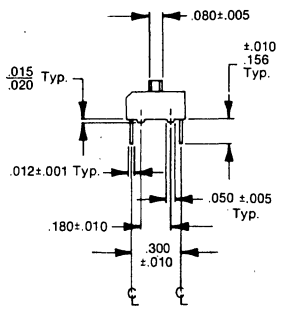
Linear Action DIP Switches

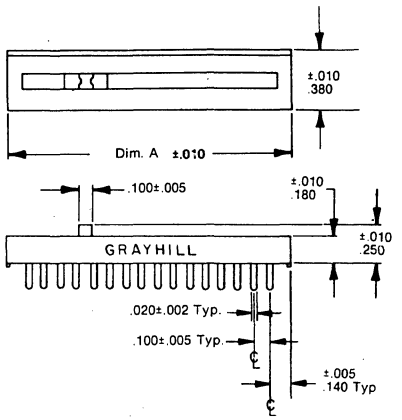
Tap Switches

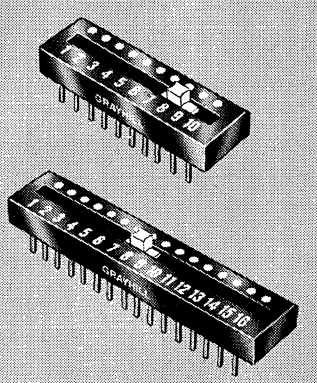
- Single Setting for Accurate Programming
- Choice of Isolated Circuits or Common Bus
- Choice of 10 or 16 Positions

Dimensions

Note: Drawing shows a 16 position switch, but dimensions also apply to a 10 position switch. Dimension A for 16 positions is 1.780", and for 10 positions it is 1.180".







1-of-10 Circuits Switch, and 1-of-16 Circuits Switch

Isolated Circuits

Each position is a single isolated circuit, and is so indicated by the single dot above each position. The moveable contact is non-shorting.

See next page for specifications and prices.

Specifications

Ratings

Mechanical Life: 2,000 cycles minimum. Note: A cycle is one complete operation, back and forth thru all switch positions.

Make and Break Current Rating; 2,000 cycles at 10 mA, 30 mV DC; 1,000 cycles at 25 mA, 6 VDC; 1,000 cycles at 50 mA, 30 VDC.

Contact Resistance: 100 milliohms maximum after life, measured at 10 mA DC and 50 mV (open circuit). Initial values are 60 milliohms maximum for coded switches, and 50 milliohms for other Linear Action Switches.

Insulation Resistance (At 100 VDC): Between adjacent isolated contacts—1,000 Megohms minimum after life; (5,000 Megohms initially). Between adjacent open contacts 1,000 Megohms minimum after life. (5,000 Megohms initially).

Dielectric Strength Between adjacent isolated contacts: 500 VAC after life, (750 VAC initially). Across open contacts: 500 VAC after life, (750 VAC initially).

Current Carry Rating: 2 Amps with a maximum contact temperature rise of 20° C.

Note: These specifications are based on preliminary testing; additional ratings and test information are available upon request.

Materials and Finishes

Switch Cover, Slide, Base: Polyester, 94 VO rating.

Shorting Arm: Phosphor Bronze, Gold plated .00001 minimum over Nickel plated .00002 minimum.

Base Contacts: Brass, Gold plated .00001 minimum over Nickel plated .00002 minimum.

Terminals: Brass, Tin plated .00005 minimum over Nickel plated .00002 minimum.

Potting Material: Epoxy.

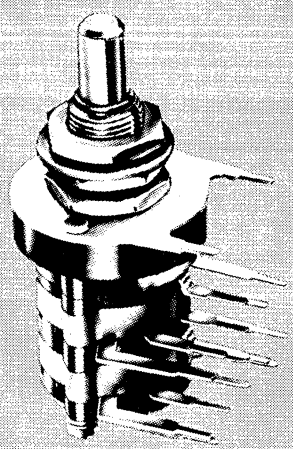
Grayhill, Inc. / 561 Hillgrove Ave. / P.O. Box 373 / La Grange, IL 60525-0373 / (312) 354-1040

1 Inch, 1 Amp, Rotary Switch

With A Wide Range Of Variations And Options

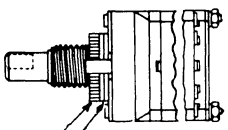
- 30°, 36°, 45°, or 90° angle of throw
- 1 thru 6 poles/deck
- 1 thru 12 decks
- Non-shorting or shorting contacts
- Adjustable stops (see below)



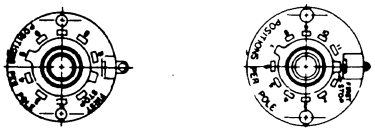
P.C. Mounting

ADJUSTABLE STOPS

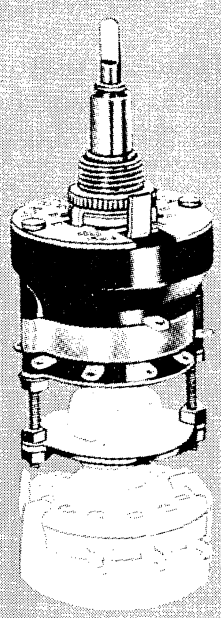
Adjustable stop switches permit the user to externally set the switch stops which limit its rotation. Adjustment is accomplished by removing the stop washers and relocating them. The knurled nut or the panel can be used to hold-in the stop washers. All other dimensions are the same as the standard style.



Adjustable stop washers.
Use of knurled nut is optional.



Series 44 is available with adjustable stops in 30° angle of throw only.



Add-A-Pot

SPECIFICATIONS

Rated: To make and break the following loads with 30° or 36° angle of throw: 1 amp., 115 VAC resistive; 1 amp., 6 to 28 VDC resistive; 0.25 amp., 115 VAC inductive; 0.02 amp., 115 VDC inductive; 0.10 amp., 6 to 28 VDC inductive; 0.10 amp., 115 VDC resistive. To carry 10 amps. continuously.

Contact Resistance: After 25,000 cycles of operation .020 ohms maximum.

Insulation Resistance: 50,000 megohms minimum (initially).

Voltage Breakdown: 1,000 VAC initially (500 VAC or better after most enviornmental tests).

Life Expectancy: 100,000 mechanical cycles of operation; details in catalog.

Stop Strength: 15 pound-inches standard, 12 pound-inches adjustable minimum.

Rotational Torque: 8-115 ounce-inches, depending on the number of poles per deck and the number of decks.

Contacts: Shorting or non-shorting wiping contacts with over 150 grams contact force.

Shaft Flat Orientation: Flat opposite contacting position of pole number one. (See circuit diagram.)

Specifications and circuit values for military styles along with additional characteristics available—contact Grayhill for complete engineering catalog.

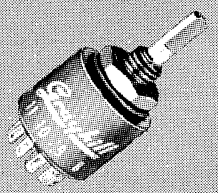
Grayhill INC

½ Inch Diameter Single Deck

Outstanding Circuit Versatility And A Wide Range Of Options

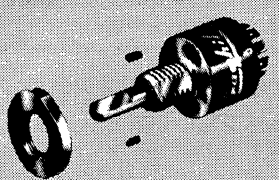


The most popular Series 50 and 51 rotary switches are fixed stop, with or without panel seals, solder lug or PC terminals. The drawing below (Figures 1 thru 4) show these combinations. The chart below lists the switch style that describes the combination and the appropriate drawing that illustrates the combination. The Series 50 is 36° angle of throw and 0.500″ diameter. The Series 51 is 22½° or 30° angle of throw and 0.562″ diameter. Many other options are available as described below.

STANDARD FEATURES OR OPTIONS

—Screwdriver Slotted Shafts
—Coded Versions
—Spring Return (Momentary Positions)
—Push-To-Turn or Pull-To-Turn†
—Keylock (Key Operated)
—RFI Grounding†
—Electrostatic or Electromagnetic Shielding†
—Intermix of Shorting and Non-Shorting Contacts†

†Indicates not available through distributors



ADJUSTABLE STOPS

Military Style Rotary Switches

The Series 50 and 51 Rotary Switches are also available with military type switch materials. Many types of the Series 50 are fully qualified to MIL-S-3786/20. Many types of the Series 51 are fully qualified to MIL-S-3786/35. These documents as well as the QPL (Qualified Products List) should be consulted for complete specification and ordering information. Contact GRAYHILL for additional assistance in specifying military styles Series 50 and 51 Rotary Switches.

45°, 60° or 90° Angles of Throw

The Series 50 Rotary Switch is also available with 45° (8 position), 60° (6 position) or 90° (4 position) angles of throw. These angles of throw are available with 1 or 2 poles per deck, solder lug or PC mount terminals, with or without shaft and panel seal, fixed or adjustable stops and in standard or military types.

Adjustable Stops

Adjustable stop versions of the Series 50 and 51 Rotary Switches are readily available from local distributor stock. The adjustable stop versions are form, fit and function equivalents to their fixed stop counterparts. Adjustable stop Series 50 and 51 Rotary Switches can be provided in all angles of throw and with or without shaft and panel seal. Contact your local distributor or GRAYHILL for cross reference information between fixed and adjustable stop switches.

UNSEALED — FIXED STOPS

Shown on these two pages are the standard unsealed and sealed fixed stop version with solder lug or PC terminals.

SPECIFICATIONS

RATING:
Rated to make and break 200MA for 10,000 cycles of operation or 50MA for 25,000 cycles of operation, resistive load, 115VAC or 30VDC. For 22½° switch, rating is lower. For complete load life information, see GRAYHILL Rotary Switch catalog.

CONTACT RESISTANCE:
50 milliohms maximum (10 milliohms initially).

INSULATION RESISTANCE:
10,000 megohms minimum between mutually insulated parts (50,000 megohms initially).

VOLTAGE BREAKDOWN:
600VAC between mutually insulated parts; 400VAC for 22½° switch.

CARRY CURRENT:
6 amperes with a maximum contact temperature rise of 20°C.

Rotary Switches

Specifications

RATING:
Rated to make and break 200 mA for 10,000 cycles of operation or 50 mA for 25,000 cycles of operation, resistive load, 115 VAC or 30 VDC. For complete load life information, see GRAYHILL Catalog Number One.

CONTACT RESISTANCE:
100 milliohms maximum (15 milliohms initially).

INSULATION RESISTANCE:
10,000 megohms minimum between mutually insulated parts (50,000 megohms initially).

VOLTAGE BREAKDOWN:
600VAC between mutually insulated parts.

CARRY CURRENT:
6 amperes with a maximum contact temperature rise of 20°C.

SHAFT AND PANEL SEAL
Panel is sealed by an "O" ring at the base of bushing. Shaft is sealed by an "O" ring inside the bushing. After the switch is mounted, seals do not alter the dimensions of the unsealed style.

ADJUSTABLE STOPS
Set and Reset Stops to Limit Rotation Form, Fit and Function Equivalent to Fixed Stop Counterparts

Adjustable Stop Switches: Two stop pins and an adhesive backed sticker or seal washer are provided. Stop pins can be located or reset as desired. Sticker or seal washer maintains stop pins in place. Sticker or seal washer can be removed to change stop pin location.

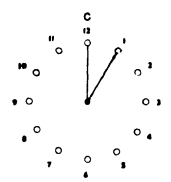
'Faston' Terminals



CIRCUIT DIAGRAM
Drawings and Spec. For Ref. Only

SPECIFICATIONS

RATING:

Series 19 switches are UL listed at:
15 amps, 120 VAC, non-inductive load. 1 amp, 120 VDC, non-inductive load.

This rating is based on the following criteria:
Overload — 50 operations at 125% rated AC load and 150% rated DC load.

Endurance — 6000 operations at rated load with 900 VAC dielectric strength before and after test.

Temperature Rise — Not to exceed 30°C when carrying rated AC load after endurance test.

Contacts will carry 20 amps at 115 volts AC with 30°C maximum temperature rise.

CONTACT RESISTANCE: (Measured at 2 VDC and approximately 100MA) for new switch approximately 10 milliohms.

INSULATION RESISTANCE: Approximately 100,000 megohms. Between mutually insulated parts.

VOLTAGE BREAKDOWN: Approximately 2500 VAC. Between mutually insulated parts.

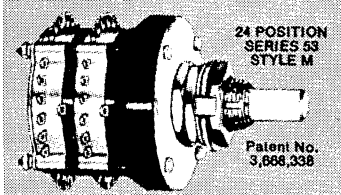
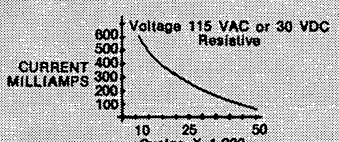
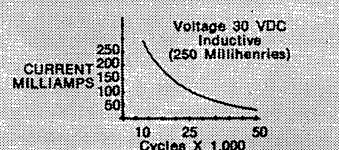
Make And Break More Circuits In Less Space.







SPECIFICATIONS

Voltage: 115 VAC or 30 VDC, resistive load; 30 VDC inductive load.

Contact Resistance: 50 milliohms maximum (15 milliohms initially).

Insulation Resistance: 10,000 megohms minimum between mutually insulated parts. (50,000 megohms initially.)

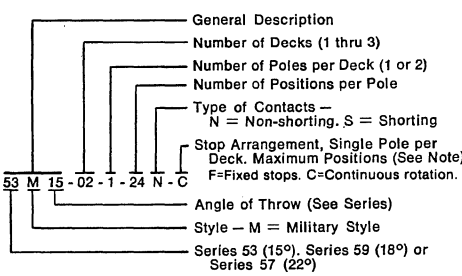
Voltage Breakdown: 500 VAC minimum between mutually insulated parts. These switches will carry 4 amperes with a maximum contact temperature rise of 20°C.

Chart shown for non-shorting contacts (break before make).

One cycle is 360° rotation and a return through all switch positions to the starting position. The data for the curves on the right was measured at sea level 25°C and 68% relative humidity with the above life limiting criteria.

ORDERING INFORMATION

How to determine part number. Suffix "C" or "F" is required for a complete part number when ordering single pole/deck switches with maximum number of positions. Sample part number for a 2 deck, 1 pole/deck, 24 position, Style M, 15° angle of throw, non-shorting contact switch without stops:



For 3 to 12 poles per deck; 4 thru 12 decks; military qualified, sealed styles, contact factory.

Voltage Breakdown: 500 VAC minimum between mutually insulated parts.

Chart shown for non-shorting contacts (break before make).

One cycle is 360° rotation and a return through all switch positions to the starting position. The data for the curve was measured at sea level, 25°C. and 68% relative humidity with the above life limiting criteria.

High Reliability Supported by Unique Technology

Flux Scanning Method:

In spite of severe control of the sealing process, there is a slight probability that foreign matter such as magnetic particles may enter the glass. After extensive study in the detection of micro impurities, OKI has adopted the highly reliable flux scanning method. In flux scanning, external magnetism is moved so that foreign matter near the reed is forced to jump to the contact part. The contact resistance then measured is used as the standard for the selection of characteristics. We have thus succeeded in remarkably improving the reliability of reed switches by replacing conventional visual checking with the latest flux scanning method.

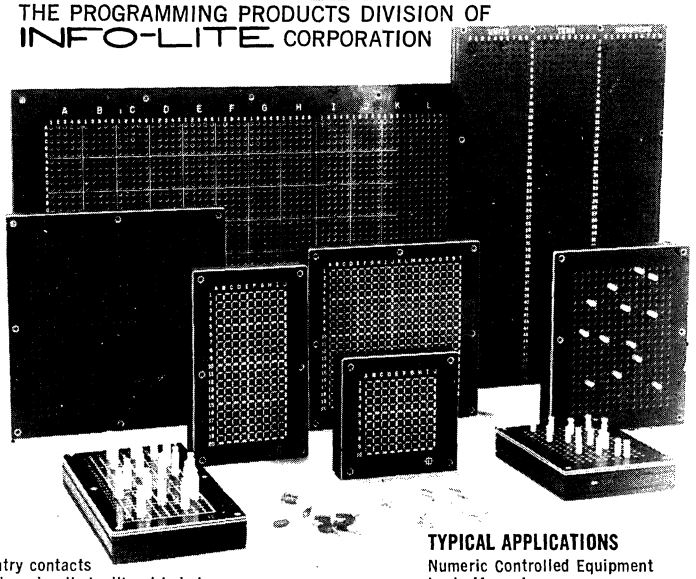
CROSSPOINT

THE PROGRAMMING PRODUCTS DIVISION OF
INFO-LITE CORPORATION

PROGRAMMING PRODUCTS

MATRIX PINBOARDS



INFO-LITE has developed a most convenient, compact and economical system for reliable programming and switching • The Matrix Program Board allows a wide variety of switching/programming functions to be performed by simply inserting programming pins (shorting or diode type) into a 2 to 10 deck contact matrix • No accessorise such as "read" "write" equipment are required • Matrix Board features have lead them to be favored over such devices at patchboards, card readers, toggle and thumbwheel switches, mag/punched tape and electronic memories • The two basic uses for Matrix Program Boards are: (1) Cordless patching (input-output switching), using shorting pins; (2) Programmable diode matrices (logic memories), using diode pins • Units with up to 100 x 100 crosspoints can be supplied to meet your requirements, whether for prototype or production quantities.

See Data Sheet MB3 for detailed specifications.

FEATURES

- Reliable closed entry contacts
- Rugged programming pins that will not beind
- Rapid and convenient method of programming/switching
- Permits insertion of components into network without soldering
- Replaces costly complex switching hardware
- Attractive and compact package
- Low capacitance for high frequency applications
- Ease of visual program checking

TYPICAL APPLICATIONS

Numeric Controlled Equipment
Logic Memories
Power Distributors
Circuit/Component Test Programmers
Lighting Systems
Code Generators
Programmable Diode Matrices
Communications Distributors

SPECIAL SWITCHING/PROGRAMMING PRODUCTS

CROSSPOINT's advanced manual and electronic programming products cover a selection ranging from simple switches to complex electronic networks. The manual devices combine the ease of a switch with the versatility of a patchboard system. The electronic systems include a wide range of ROM, PROM, EPROM and EROM hardware with software to meet a broad spectrum of customer applications.

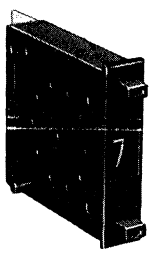
THUMBWHEEL SWITCHES

IMLEC

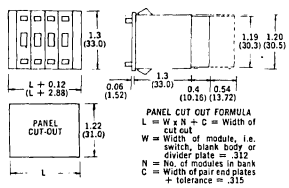


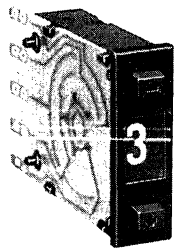
MODEL II IMLEC INDEXER PUSHBUTTON FRONT MOUNT

The Imlec Indexer is a bi-directional push indexing front mount switch, 5/16" in width. Identical in size to our popular MF switches. With snap together banking and snap-in panel mounting. Pushbuttons above and below the legend allow the user to add or subtract from the count.

These 10 or 16-position switches are available in all popular codes.

DIMENSIONS IN INCHES (IN MILLIMETERS)



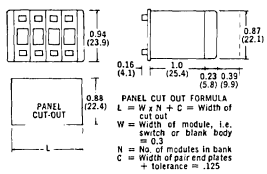


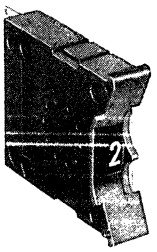
MODEL MI MINI INDEXER PUSHBUTTON FRONT MOUNT

The Mini Indexer is a bi-directional push indexing front mount switch. 0.30" in width. Similar to our Imlec Indexer but smaller in size. Features snap together banking and snap-in panel mounting. Pushbuttons above and below the legend allow the user to add or subtract from the count.

Available in most popular 10-position codes.

DIMENSIONS IN INCHES (IN MILLIMETERS)



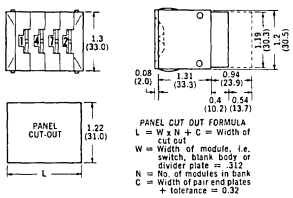


MODEL MF MINIATURE FRONT MOUNT

The MF is our most popular, low cost, 5/16" wide Thumbwheel Switch. Slim, attractive, snap-in panel mounting requires no panel mounting hardware.

Available in all popular 10 and 16-position codes. Matte black finish on high impact moldings, with white legend on black wheel standard.

DIMENSIONS IN INCHES (IN MILLIMETERS)

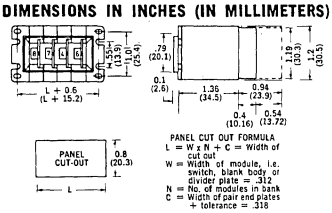


MODEL TR THIN REAR MOUNT

For applications that require a lot of switch in a small space, these 5/16" wide TR switches are ideal. Rear mount counterpart to our popular MF front mount switches.

Available in most 10-position codes including Decimal, BCD, BCD plus Complement and Complement only.

DIMENSIONS IN INCHES (IN MILLIMETERS)

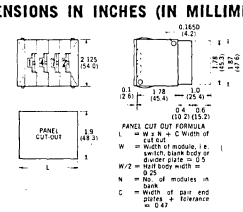


MODEL IF INTERMEDIATE FRONT MOUNT

A rugged front mount switch with large digits, 1/2" wide module. Snap-in front mounting hardware. Available in most popular 10 and 16-position codes.

Matte black finish with white legends on black wheel standard. Gloss fnish, other wheel colors and legends available.

DIMENSIONS IN INCHES (IN MILLIMETERS)

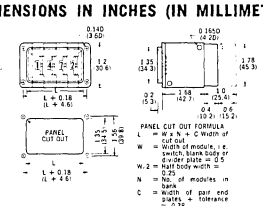


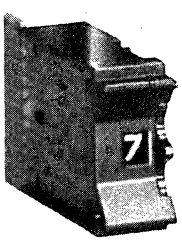
MODEL IR INTERMEDIATE REAR MOUNT

Rugged rear mount counterpart to our IF model, with large readable digits, 1/2" wide module. Available in most popular 10 and 16-position codes.

Matte black finish with white legends on black wheel standard. Gray bodies, gloss finish, other wheel colors and legends available.

DIMENSIONS IN INCHES (IN MILLIMETERS)

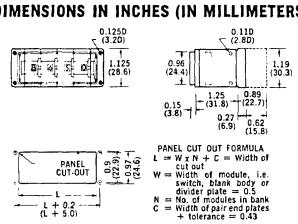




MODEL MR MINIATURE REAR MOUNT

Popular rear mount switch, 1/2" wide module but lower profile than IR model. Available in matte black in most popular 10-position codes including Decimal, BCD, and BCD plus Complements.

DIMENSIONS IN INCHES (IN MILLIMETERS)



Voltage: 200 volts max DC (within power rating) or RMS.

Power: 24 watts max per switch with 12 watts max per energized output.

Insulation Resistance: 1000 megohms between adjacent contacts at 25°C and 20% relative humidity.

Contact Resistance: 0.1 ohms initial and 0.2 ohms after life test at 25°C.

Dielectric Strength: 500 VAC.

Moldings: High impact acetate body in matte black, gloss black or gray finish; wheels are polycarbonate in black with white legends standard, white with black legends for lighted versions, other colors available.

Contact Material: Stator has 0.0001" hard gold over 1 oz. copper on glass fibre as MIL-P-13949GF. Rotor has silver/gold alloy on beryllium copper.

Life: 1,000,000 detents minimum either direction.

Stops: Stops to limit switch to any position.

Panel Thickness: 1/16" to 5/32".

Operating Temperature: −20°C to 70°C. Storage temperature: −40°C to 70°C.

Shock: 100 G's, 6 MS.

Vibration: 15 G's to 70-2000 Hz.

Humidity: 96 HRS, 95% relative.

Options and Accessories Available: Extended Boards for diode suppression; Termination Pins; Stopping; Blank Bodies, Half Bodies; End Plates Divider Plates; Connectors; External LED Lighting; Sealing, etc.

SPECIFICATIONS

ALL MODELS

Contact Current: Contacts rated 2 amps @ 115 VAC or 28 VDC non-switching; 0.5 amps @ 28 VAC or DC switching. Minimum recommended switching current 10 microamps @ 20 millivolts.

Thumbwheel Switches

Our thumbwheel switches are designed to give the logic and package designer maximum flexibility through an almost unlimited choice of electrical/mechanical configurations, switching logic, terminations, and circuit capacity. Interswitch offers more than 25 different codes including decimal, BCD, hexadecimal, seven segment code, voltage dividers, and resistance decades. Numerous options are available such as long PC boards (for mounting components), colored wheels, stops, and custom markings on housings, spacers and thumbwheels.

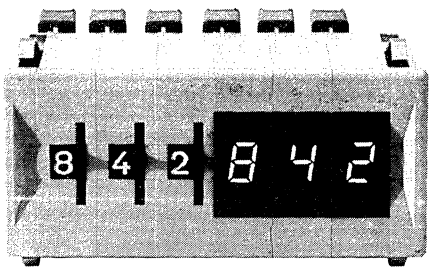
Codicount Displays

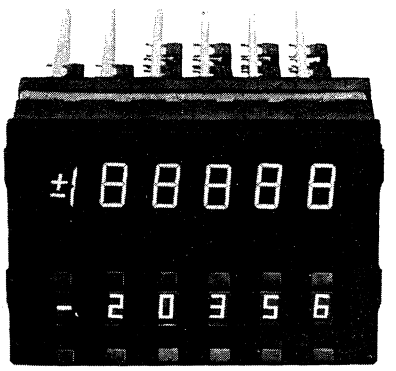


Our highly reliable, compact Codicount LED display modules are easily assembled into multi-decade blocks incorporating the Interswitch thumbwheel series, or used by themselves as output devices.

General Information

- 8 series over 50 models
- TTL or CMOS logic
- 5 to 24V supply voltage
- 9 to 45 mm digit heights
- red or green LED's
- seven segment and sign/overflow displays
- modules are available with direct, decimal, BCD, inverted or counter inputs, memory, and BCD outputs

Multicount Switches



Our versatile Multicount line of seven segment displays with integral decade switches saves valuable panel space and simplifies mounting and wiring.

General Information

- 6 types
- TTL or CMOS logic
- 5V (TTL) or 12V (CMOS) supply voltage
- 9 mm character height
- available functions include decoders w/latch, integral comparators, and pre-setable up-down counters

vacuum contactors

Vacuum Contactors are used to control large amounts of DC power and RF currents with ratings up to 50 kv and currents up to 600 Amperes continuous. These contactors are recommended wherever high voltage capability, small size, and high speed operation with a long and low maintenance life are important. Applications include primary control of power supplies, industrial motors, and induction heating equipment, RF system tap changing, and fault protection of high power transmitters. The 16 page catalog provides complete specifications with a variety of specific applications for 3-pole, high voltage AC and DC, RF contactors and overcurrent relays actuated by solenoid, air or motor drives.

vacuum interrupters

Industrial Vacuum Interrupters from ITT Jennings offer many advantages over air, oil or hermetically sealed alternatives. They are generally smaller, less expensive to install and maintain, faster, and can be used in hazardous or corrosive environments because of the vacuum sealed contacts. They are especially recommended where dust, high humidity or high altitudes make dielectric strength difficult to maintain.

Specific applications in motor control utilize the models RP130, RP170, or RP157 where low "chop" currents are needed to protect motor windings, and limit switching transients. They are also ideal for mining and heavy industrial equipment applications to 7.2 kV.

Other ITT Jennings Industrial Vacuum Interrupters are used for switching dust percipitator plates where voltages to 75 kVDC must be controlled in hazardous environments, and to control RF induction, dielectric and arc furnaces. They are also recommended for RF applications such as high power transmitter band switching, coil tap, and filter network switching.

Special Purpose Vacuum Interrupters are used for applications requiring high voltage and current capabilities. They are recommended for high power communications systems for overload circuit breakers, remote control antenna selection, tuning relays, transmission line switching, rapid action crowbar protection, auto grounding for DC power supplies and high voltage pulse network selection switches. These interrupters are also used for coil tap changing, in RF induction and dielectric heating units, in primary and secondary control of large industrial equipment, high voltage capacitor charging and discharging circuits, transient pulse generation, and for safety grounding in high capacitance circuits.

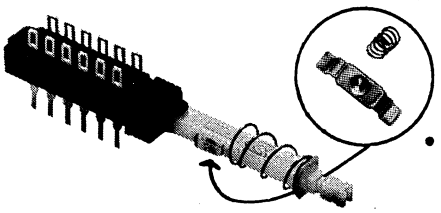
MODULAR PUSH BUTTON SWITCHES

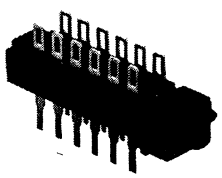
"Creative Switchmakers" for Home Entertainment Products and Test Equipment

If it's a better switch you need . . . better switch to Schadow!

better switch... here's why...



HAND WIRING AND FLO-SOLDERING CONNECTIONS ARE STANDARD
- Solder lugs on top for hand wiring
- PC spikes at bottom for flo-soldering



SUPERIOR MODULAR CONSTRUCTION
- Ease of maintenance . . . switch plunger with sliding contacts is removable from the front without disturbing electrical connections

INDIVIDUAL COIL SPRING LOADED MOVING CONTACTS
- The coil spring-loaded contoured moving contacts have been designed to provide balanced contact pressure for optimum surface to surface interface with the fixed contacts . . . assuring reliable performance in low voltage (dry circuit) applications
- Long term low contact resistance
- Constant coil spring tension at the contact points provides positive self-cleaning action

MODULE ADVANTAGES
- Enclosed housing protects inner contact area from dust and foreign intrusions
- Fixed terminals are "staked" in position, providing an extra seal to help prevent wicking of solder or flux
- Molded PC Board Standoffs, front and back, on bottom side, assure parallel mounting

TECHNICAL DATA

Contact Resistance .....4-6 mOhms after 25,000 cycles .....6-20 mOhms
Lifetime Expectation Interlocked (50,000) Momentary, Push Push (100,000) cycles
Material of Construction
Fixed contact. Brass/Silver Plated .....0002"
Moving contact .....Bimetal Brass/Silver .0004"
Plunger Material....Polycarbonate V-0 rated or Delrin
Contacts .....Non-shorting
Housing Material.....Polycarbonate V-0 rated or Glass Reinforced Nylon
Terminal Board Material .....High Grade Paper Phenolic or V-0 rated material.....Series F
Key pressure with 2PDT .....28 oz.
Key pressure with 4PDT .....32 oz.
Key pressure with 6PDT .....35 oz.
Key pressure with 8PDT .....42 oz.
Key pressure with 10PDT .....46 oz.
Key pressure with Power Switch .....42 oz.

NOTE: Lighter key pressures available, contact factory for details.

NOTE: For switching applications requiring flame retardant materials, contact factory.

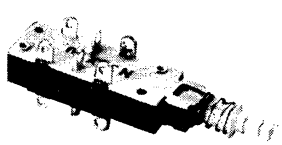
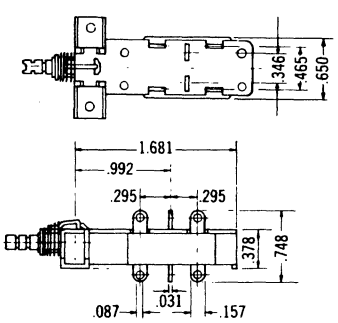
N30 TV-5 rated power switches

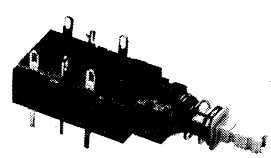
(Also available with 2PDT low voltage auxiliary contacts) UL, CSA, VDE Approved.

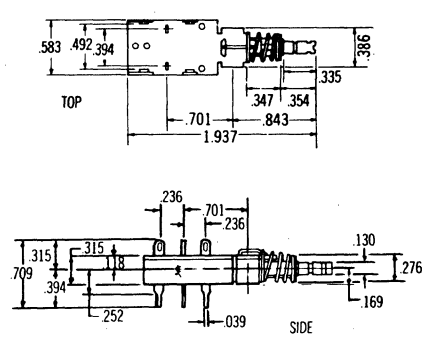




Series NE 15/F line switches

(Also available with 2PDT low voltage auxiliary contacts) UL, CSA, VDE Approved, 4 AMP 250 VAC.





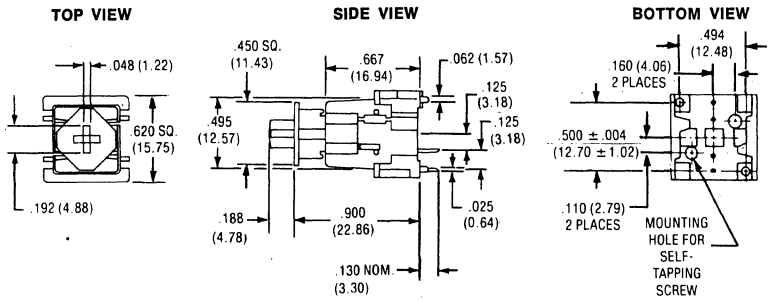
ITT ITT Schadow inc

DC50 Series Key Switches (Full Travel)

The DC50 Series exceptional reliability and outstanding performance is achieved through ITT Schadow's patented diaphragm process which sandwiches two gold-plated contacts between Mylar* and stainless steel to permanently protect them from damage and environmental contamination.

- Modular construction
- Tease-proof action
- Tactile feedback
- Contact bounce less than 2 milliseconds
- Membrane contact

(0° KEYSTEM EXAMPLE)

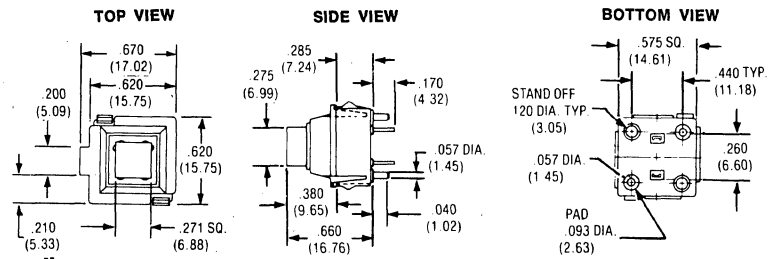


DC60 Series Key Switches (Full Travel)

The ITT Schadow DC60 Series Key Switches are value engineered to achieve the highest possible performance at a much lower cost than conventional mechanical switches.

- Choice of 3 low profile
- Trifurcated gold-inlayed contacts
- Snap fit sub panel mounting
- Tactile feedback
- Variety of actuation forces
- Momentary or push push action
- 61-01 complies with European D.I.N. specifications
- Modular construction

(DC61-01 EXAMPLE)

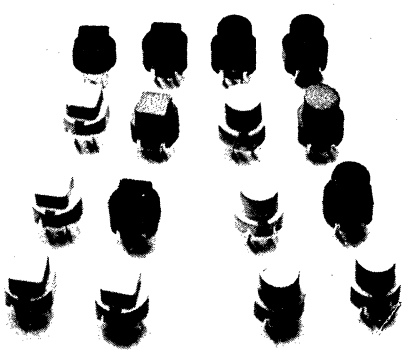


D.I.N. Compliance

ITT Schadow's DC61-01 and DC61-02 Full Travel Key Switches are among the lowest profile module Key Switches ever built. This low profile conforms to strict European health and safety regulations by complying to their D.I.N. standard. So if you are now selling or ever plan to sell to the European market, you owe it to yourself to take a look at these low profile switches.

D6 Series Key Switches

The D6 is a single pole, single throw normally open key switch specially designed for digital electronic control. Its small size enables keyboard design with minimum center spacing of .500 (12.70mm). The commoned terminals offer the possibility of X. Y coding by using a single sided printed Circuit Board.
Built-in buttons (square or round) are available in several colors and have been designed to fit directly onto front panels. The total travel of .031 (0.80mm) combined with the snap effect provide the user with a smooth, gentle yet positive tactile feedback.



- Tactile feedback
- Three package styles
- Eight colors
- Commoned terminals
- Small size .500 (12.70mm)
- Low cost

ELECTRICAL DATA

Electrical diagram SPST NO		Electrical diagram SPST NO	
Contact resistance	≤20 mΩ	Contact bounce	3 ms
Breaking capacity	10 mA/35 VDC	Life (nominal current and voltage)	500,000 Cycles
Insulation resistance	100,000 MΩ	Temperature range	−20°C to +65°C
Dielectric strength	500 V	Climatic category	21 days
Inter-terminal capacity	1 pF	Solderability	235°C during 5 seconds

digitast modular electronic switch input component

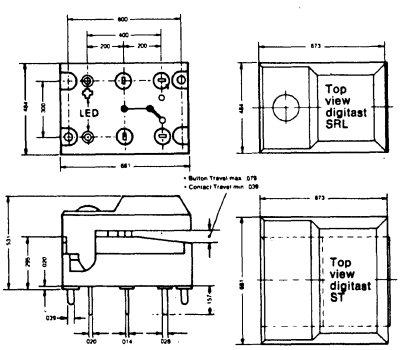
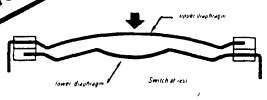
STL (LED factory or customer installed) 17.3mm wide x 17.1mm

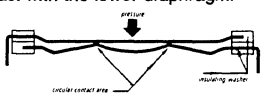
Digitast for use with DIP packages, consistent tactile feel, SPDT momentary spring loaded contact, less than 1 ms contact bounce, 24v 10ma or 60v 100ma ratings. Mechanical life greater than 1 million operations. Available with built in LED. PCB mounting. Hot stamped graphics available.



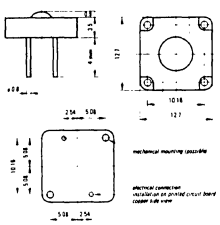
low cost
3 point contact
highest integrity
disc switch
modular electronic components

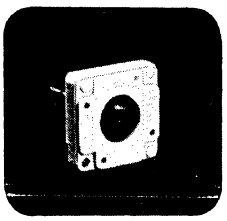


The Disc switch is built around two contact diaphragms separated by an insulating material. The profile of each of these two diaphragms is such that, under the action of applied pressure on the upper dome, it is momentarily collapsed, making instant positive, 3 point contact with the lower diaphragm.

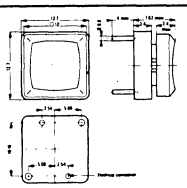


- High Reliability...10 X 10^6
- Self Cleaning
- Broad Range of Switching Power...from a few milliwatts to 30 watts.
- Low Bounce (less than 100 microseconds)

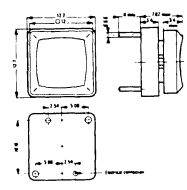


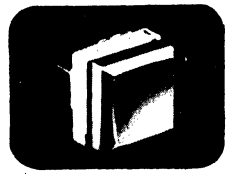


MD Disc module: Extra-flat momentary contact module. Shorter stroke configuration installable directly on printed circuit board. Enables you to design your own keyboard adapted to your own specific needs.



ED Push button switch assembly with a momentary action contact and incorporating the unique design disc switch. The switch is designed for direct insertion into printed circuit boards. Two principal advantages of the MDP switch are the short stroke (only 0.5 mm) and the crisp tactile feel.





MDP Push button switch assembly with a momentary action contact and incorporating the unique design disc switch. The switch is designed for direct insertion into printed circuit boards. Two principal advantages of the MDP switch are the short stroke (only 0.5mm) and the crisp tactile feel. Contact arrangement: single, normally open contact with momentary action. TERMINALS: tinned terminals — 0.8mm dia. x 4mm long. SOLDERING: Since the disc switch is completely sealed, it can be flow soldered. PUSH BUTTONS AND KEYS: dimensions (mm) 12.7 x 12.7 x 3.4 (7.62 with key). STANDARD COLORS: red, blue, light grey, dark grey.

PUSH BUTTON SWITCH SERIES

Option Guide: To allow quick option selection at a glance.

LT Series Light Touch Push Buttons: The Light Touch Series of push button switches offers all the reliability and versatility of the F Series switch system with dramatically lower actuation forces.

F Series Miniature Push Button: The F Series miniature push button switch forms a versatile system of modules designed for reliable performance in low voltage (dry circuit) applications.

F Series Power Switches: F Series power switches form an integral or stand alone option to our standard F Series. All mechanical functions performed by the F Series are available in the power switch offering with the exception of lockout.

F Series Options:
- Panel Mount, ZF and FPM
- Lampless status indicators
- Illuminated buttons
- Non-illuminated buttons

KEY SWITCH SERIES (Low Travel)

Digitast Series: The Digitast Series key switch is specially designed for use with dual in-line packages, yet offers a wide variety of options.

REK Series: The REK Series key switch is designed for switching low current loads utilizing a patented contact system resulting in high reliability and long operating life.

Disc Series: The Disc Series key switch is built around two contact diaphragms separated by an insulating material designed for instant contact with the advantage of being a self-cleaning contact with tactile feed back.

D6 Series: The D6 Series key switch is a single pole, single throw key switch designed for digital electronic control allowing keyboard design with a minimum center spacing of .500 (12.70).

KEY SWITCH SERIES (Full Travel)

DC50 Series: The DC50 Series exceptional reliability and outstanding performance is achieved through ITT Schadow's patented diaphragm process which sandwiches two gold-plated contacts between mylar and stainless steel to permanently protect them from damage and environmental contamination.

DC60 Series: The DC60 Series key switches are value engineered to achieve the highest possible performance at a much lower cost than conventional mechanical switches.

ROTARY SWITCH SERIES (Closed Deck)

RT-A Series: The RT-A Series rotary switch is a PC or panel mounted switch with the shaft perpendicular to the PC Board for mounting with components such as displays and indicators.

RBP-12 Series: The RBP-12 Series rotary switch is designed with index and contacts contained within a single molded plastic case with many contact variations available.

MIL Series: The MIL Series rotary switch is a totally sealed miniature rotary that can be custom built to fit almost any packaging requirement.

ROTARY SWITCH SERIES (Open Deck)

MA/MAY/MAO/MO Series — SZ/SZY/SZO/SZV Series: The MA and SZ Series low current rotary switches can be ordered with multiple contact styles in silver, silver plated or gold.

JANCO CORPORATION

Series "B" Micro-Miniature Rotary Selector Switches

QPL MIL-S-3786

- TOTALLY ENCLOSED
- EXPLOSION PROOF
- UNITIZED CONSTRUCTION

All switches offer maximum protection against radio frequency interference.

Body Diameter: .623″

Electrical Rating Continuous:
8 amps at 28 v dc

Switching Rate:
0 to 0.25 amp resistive
0 to 28 v dc
0 to 0.25 amp resistive
0 to 115 v ac
0 to 0.12 amp inductive
0 to 28 v dc

Torque: 5 to 9½ ounces

Contact Resistance:
.005 ohms average

Insulation Resistance:
100,000 megohms minimum at 100 volts
10,000 megohms minimum at 500 volts

Designed and Built to meet the environmental and functional requirements of MIL-S-3786

Series B-30 — 30°

GENERAL SPECIFICATIONS

All switches offer maximum protection against radio frequency interference.

ELECTRICAL RATING:
Carry 10 amps continuous.
Make and Break — see individual switch data.

VOLTAGE DROP:
0.1 volt or less at rated amperage.
Initial Contact Resistance: .003 ohm.

LIFE:
10,000 double cycles make and break rated amperage.

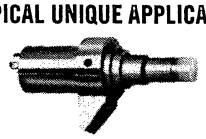
TORQUE:
1 to 3 inch lbs.

SWITCHES DESIGNED AND BUILT IN ACCORDANCE WITH THE FOLLOWING SPECS.:
MIL-S-6807 (rotary switches enclosed)
MIL-S-3786 (rotary switches)
MIL-E-5272 (environmental testing)

ON MOST OF THE SWITCHES LISTED, THE FOLLOWING FEATURES ARE AVAILABLE:

- O-ring Shaft and Panel Seal
- Combination of Decks
- Bridging contacts
- Momentary positions
- Isolated positions
- Adjustable stops
- Solenoid driven
- Keylock
- Gang switches
- Concentric shaft switches

TYPICAL UNIQUE APPLICATIONS OF JANCO ROTARY SWITCHES



DOUBLE MOMENTARY ACTION
Push button switch designed for grip stick applications. Actuation to first momentary detented position closes first circuit. Second detented position completes second circuit.

FEATURES UNIQUE ON-OFF OPERATION
Actuated by pulling knob out and rotating to "on" positions. While in "on" positions, circuitry cannot be shut off until knob is returned to "off" position and depressed.

MASTER COMMUNICATIONS SWITCH
Provides standard coded outputs and offers unique switching functions by longitudinal shaft movement. Momentary or maintained contact positions actuated by pulling shaft.

JET ENGINE START SWITCH
Knob is depressed and contacts are held in by the solenoid. After jet engine reaches desired RPM, system removes power disengaging solenoid. Lighted knob indicates function.

JANCO CORPORATION

Since 1947

Series "D" Pushbutton Rotary Switches

QPL MIL-S-22710

FEATURES: • Totally enclosed, explosion proof. • Printed-circuit construction. • Black or white numbers on black or white background indicate switch positions (black numbers on white background for lighted switches). • All standard codes available. Available in 8, 10, 12 or 16 positions. • Plastic covered buttons, available in black, red, green, yellow, white or blue.

LEDEX PUSH BUTTON CONTROLS

When your product demands the best switch the industry has to offer, examine the good looks and fine touch of a long lasting Ledex push button switch.

You can combine logic level switching (10 mA/5VDC) and high current switching (6A/250VAC) on one ganged switch.

You can get more interrelated options than any other similar switch available today—momentary, push/push, reciprocal release, master release, interlock, and emergency "all off" as required.

You can also get the most reliable delivery scheduling in the industry.

Test a pre-production prototype. Ask for our Push-Button catalogs.

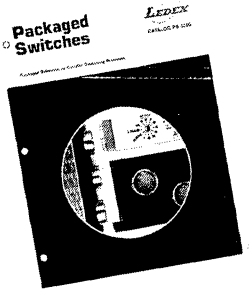
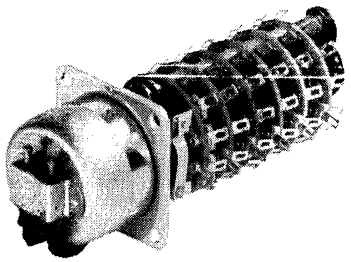
STEPPING SWITCHES/CIRCUIT SELECTORS



This catalog provides design guidelines for specifying and using hermetically sealed switches where high reliability requirements or harsh environmental conditions are factors that the designer must consider in the application.

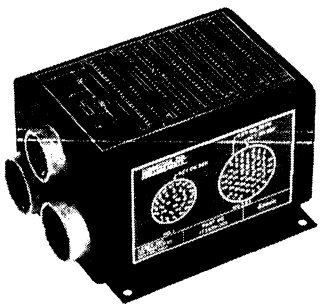
Several stock models, including compact 5 pole 2 throw, 49 pole 2 throw, and 39 pole 3 throw switches, are available for immediate delivery. Circuit diagrams and various switch control methods are given for each of the ten stock models shown.

Custom engineered programmers, variable intervalometers, controllers and management systems are provided as examples of how packaged switches can be tailored to meet a wide range of exacting requirements.



Ledex Stepping Switches
Used for relays, transfer switching, remote control of predetermined circuit patterns, remote sequencing of complex switching arrangements, or in programming checkout and sequential operations. They are known best for their ability to perform multiple switching functions reliably, in limited space, and under severe operating and environmental conditions. Available in open construction, prewired modules or as packaged control solutions.

Write for our catalog.



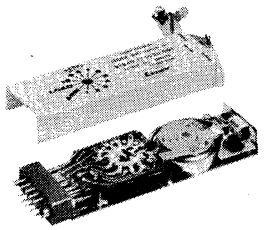
Ledex Hermetically Sealed Switches
Engineered to withstand severe shock and vibration, such as encountered in aircraft, missile and military applications, and to provide added switching reliability in adverse environments. Used extensively in aerospace and underwater guidance controls, as mode selectors, in rocket firing devices, and in a variety of military control functions that demand a high degree of reliability. There are 13 models available from the shelf.

Write for our catalog.

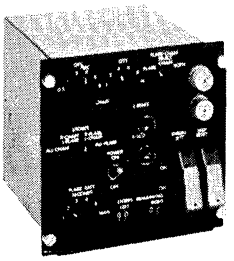
LEDEX PACKAGED CONTROL SOLUTIONS

Here are examples of Ledex Stepping Switches designed into compact, reliable control packages that combine the best characteristics of solid state and electromechanical technologies.

Whether your problem involves armament controls or commercial control functions, there's a good chance Ledex has already solved a similar problem. Our Packaged Switches Catalog shows several more detailed examples and also includes specifications for 13 hermetically sealed switches available from the shelf.



Miniaturized Armament Control Intervalometer
Flat, compact, 12-position stepping switch measures only ½" x 1¼" x 4¼", fires 19 rockets, sequentially in pairs. It includes a Ledex pulser to control time intervals over mil-spec. temperature and voltage ranges.



Dual Channel Flare/Chaff Dispenser Programmer
An all electronic dispenser, except for mechanical counters, allows programming of rate and quantity for flare or chaff dispensing by independent or simultaneous channel operation. Output pulses of up to 10 amperes per channel drive the electromechanical distributor switches located elsewhere in the aircraft. This state of the art experience can also be put to use in commercial applications as well as military. Let us interface your requirements with a "black box" solution.

Universal Stores Dispenser Intervals Variable on Digital Basis
All solid state and among the most flexible of Ledex intervalometer designs, this one permits the pilot to vary release intervals to any rate ranging from 30 ms to 9.99 seconds in increments of 10 ms. It includes a stepping switch to distribute sequential fire commands. Timing tolerance is ±10% over a voltage range of 22 to 32 volts and temperature to −55°C to +85°C. The package includes built-in suppression to protect solid state circuitry when switching inductive loads.

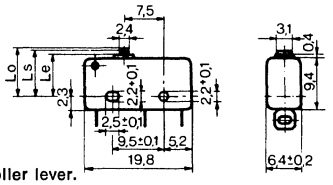
PRECISION SNAP-ACTION SWITCHES

Request Catalog 13/12 for full information

. . . a variety of types with numerous ranges and variants for applications in electrical appliances . . . air conditioning . . . heating controls . . . office machines . . . vending machines . . . electrical instruments . . . recorders and phonographs . . . vehicles . . . tested and listed/approved by UL, CSA and most European test organizations. The test voltage and current values shown are based on international standards established by international test specification CEE 24.

SERIES XC SUBMINIATURE SWITCH

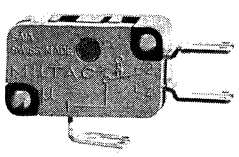


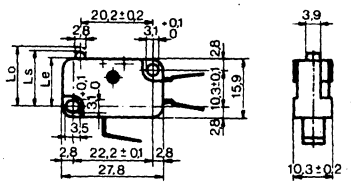
Actuation: (1) straight lever, (2) roller lever.
Housing Material: Special polyester resin moulding compound. Self extinguishing to UL 94. Maximum anti-creep characteristics — KB600.

- Specially small size, complying with int'l std (DIN41635, Form B)
- Wide choice of characteristics, terminals, actuating levers
- Tension-spring snap-action mechanism for longest possible mechanical life
- High-grade, anti-creep thermosetting moulding material for case components, preventing electrical breakdown
- Plunger can be pressed flush with case, thereby simplifying actuation
- Special fixing for actuating lever
- Ambient to 140°C

Basic Type	Basic Characteristics	Operating Force (max.) Newtons (ounces)	Differential Travel (max.) mm (in.)	Mech. Life Expectancy (millions of operations)	AC Rating, as VDE 0630	Terminals and Connection Types	Approvals/ Listings
XC	For most applications; high mech. life	1.70 (6.0)	0.1 (0.039)	10	5(1)A 250VAC	Soldering tags, plug connectors, PC terminals	(XC, XCC): UL, CSA, VDE, SEV, SEMCO, NEMCO, DEMCO
XCF	High elec. rating; switching security for control of motors	3.00 (10.7)	0.1 (0.039)	1	10(2)A 250VAC	SPDT (changeover), SPST (normally open, normally closed)	
XCC	Low oper. force; very high mech. life	0.60 (2.14)	0.1 (0.039)	50	2(0.5)A 250VAC		
XCH	Lowest oper. force; very high mech. life	0.35 (1.2)	0.1 (0.039)	50	10(0.1)A 250VAC		

SERIES XG STANDARD ECONOMY SWITCH





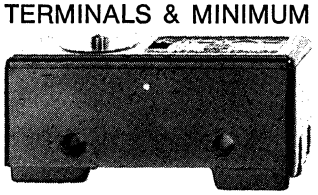
Actuation: (1) straight lever, (2) simulated roller lever, (3) bent lever, (4) roller lever
Housing Material: Thermoplastic type 181. Creep resistance KB250, test solution F.

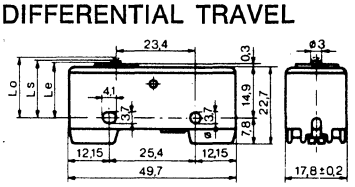
- Complies fully with international standards (DIN41635, Form A)
- Highest mechanical life (up to 100 Mio operations)
- High contact pressure, serrated contact surface, and contact wiping assures proper contact
- Electrical rating up to 16 A 250 VAC. With AgCdO-contacts 6 (2) A, 380 VAC available

XGK	For most applications; high mech. life	1.50 (5.4)	0.35 (0.014)	30	10(3)A 250VAC	Plug, solder, lug, screw, twin plug, short solder terminals	UL, CSA, VDE, SEV, SEMCO, DEMCO, NEMCO, UTE, BS
XG	High elec. rating. Best switching security at low voltage	3.20 (11.4)	0.35 (0.014)	5	16(3)A 250VAC		
XGA		3.20 (11.4)	0.15 (0.006)	5	16(3)A 250VAC	SPDT (changeover), SPST (normally open, normally closed)	
XGB	High mech. life, mean oper. force	1.50 5.4)	0.15 (0.006)	30	10(3)A 250VAC		
XGC	Low oper. force; very high mech. life	0.80 (2.9)	0.15 (0.006)	50	6(2)A 250VAC		
XGH	Lowest oper. force; very high mech. life	0.45 (1.6)	0.35 (0.014)	50	6(2)A 250VAC		

- High grade, anti-creep thermosetting plastic for case and lid
- Plunger may be depressed flush with case for ease of operation
- Ambient to 150°C

SERIES XO BASIC SWITCH WITH HEAVY-DUTY TERMINALS & MINIMUM DIFFERENTIAL TRAVEL





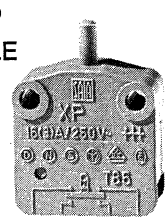
Actuation: (1) pin plunger, (2) short leaf-spring lever, (3) long leaf-spring lever, (4) leaf-spring lever with roller, (5) straight lever, (6) bent lever, (7) roller lever.
Housing Material: Thermosetting plastic type 181. Creep resistance KB250, test solution F.

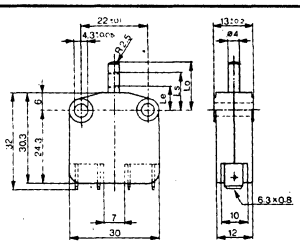
- Wide choice of actuating levers and terminal forms

XO	Rating of 16(3)A/380 VAC; min. differential travel, massive terminals and numerous variations of actuating member	4.50 (16.0)	0.08) (0.003)	10	16(3)A 380VAC 20(4)A 380VAC (opt.)	Screw terminals, flat plug, solder connectors, screw connectors SPDT (changeover)	VDE, SEV, UL, CSA, SEMCO, DEMCO, NEMCO

- Extreme constancy of operating position
- Complies fully with international standards
- High grade, anti-creep, thermosetting plastic for the case
- Serrated contact surface and contact wiping assure ideal contact
- Heavy-duty screw terminals
- Extremely small differential travel from 0.005 mm (0.0002 in.) up to 0.08mm (0.003 in.)
- Ambient to 120°C (standard)

SERIES XP MONOSTABLE SWITCH





Actuation: (1) pin plunger, (2) short leaf-spring lever, (3) long leaf-spring lever, (4) leaf-spring with roller, (5) straight lever, (6) bent lever, (7) roller lever, (8) straight reversing lever, (9) reversing lever with roller, (10) reversing lever with swivel roller, (11) pin plunger, (12) roller plunger.
Housing Material: Thermosetting plastic type 181. Creep resistance KB250, test solution F.

Unlike the above switches, series XP is of the push type, with slow-moving contact

XP	Monostable switch w/o snap-action. Contact gap exceeds 3mm (0.118 in.)	3.0 (10.7)	—	1	16(3)A 250VAC	Screw terminals, flat plug connectors, solder connectors, screw connectors with reduced base SPDT (changeover)	UL, CSA, SEV, VDE, IMQ, DEMCO, NEMCO, SEMCO, Belgium, Finland

- Push switch (without snap-action mechanism) mainly for applications, as door switch in domestic appliances, in copying and vending machines
- Particularly long over-travel, simplifying actuation of switch
- Rating of 16 A, 250 VAC
- Gap of more than 3 mm (0.118 in.) suits it for use as isolating switch
- Ambient to 140°C

MICRO SWITCH

TABLE OF CONTENTS

The products described in the following pages are representative of the thousands of position sensing and manual control products manufactured and distributed by MICRO SWITCH. For comprehensive catalogs write MICRO SWITCH, Freeport, Illinois 61032, Dept. 720E. Or, call (815) 235-6600. For application assistance, contact a nearby MICRO SWITCH Sales Office. See listing in this Directory. For off-the-shelf products, see your local MICRO SWITCH Authorized Distributor listed on pages 49 & 50.

POSITION SENSORS

Hall effect position sensors

Hall effect sensors are operated by the magnetic flux from a permanent magnet or an electromagnet. The sensing element is a Hall sensor with a trigger and amplifier integrated on a silicon chip. These integrated circuits have been performance tested to over 19 billion operations. Operating speeds can exceed 100 kHz.

XL solid state switches page 8

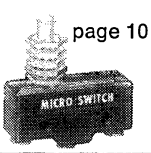
XL mechanically operated Hall effect switches combine mechanical switch operating and mounting convenience with solid state reliability. The mounting dimensions and mechanical characteristics are similar to the popular V3 snap-action switch.

ES current sensors page 9

ES current sensors are used in circuits to sense short circuits or other overcurrent conditions. They produce a digital signal as the current being monitored exceeds a specified value.

Z and A standard switches page 10

Standard size switches. Ratings to 25 amps. High precision-long life. Wide choice of actuators and terminals. Use for general purpose applications.

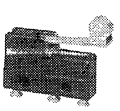


SX subminiature switches page 15

Smallest snap-action switches from MICRO SWITCH. Rated to 7 amperes. Choice of actuators and terminal styles. Use where the smallest and least weight, snap acting switch is essential.

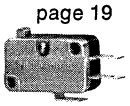
SM subminiature switches page 17

Slightly larger than SX switches. Rated to 11 amperes. Choice of contacts, actuators and terminal styles. Use for communications/office equipment and other smaller application needs.



V3 miniature switches page 19

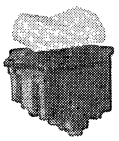
Standard or low operating forces. Rated to 15 amperes. Use for appliance-vending machine and similar applications.



MANUAL SWITCHES

TP sealed rockers page 21

Sealed rocker toggle series. Standard size 1, 2 and 4 poles. Various actuators, termination and circuitry. Military and UL listings.



TK industrial toggles page 22

Sealed toggle series. Standard size. 1, 2 and 4 poles. Various actuators, termination, and circuitry. UL listings.

TL sealed toggles ..... page 23

As above but mil. listed.

TS standard toggles page 24

Standard size toggles, 1 or 2 pole. Various actions, circuitry and termination. Use where a lower cost standard size toggle is required.

AT toggle assemblies page 25

Toggle switch assemblies using basic switches. Wide variety of ratings, contacts, actuators, terminals, and sealing. Mil listings available.

AML advanced manual line page 26

AML provides a choice of solid state, electronic, or power controls with pushbutton, rocker, paddle or keylock actuation. Incandescent, LED or neon lighting illuminate a wide variety of display options. Single level termination with all common types available. Choice of snap-in front mount, strip or matrix mount.

MML miniature manual line page 37

MML miniature pushbuttons provide a choice of solid state, electronic or power duty controls. Plus incandescent or LED illumination with printed wiring board or snap in panel mounting. Operating modes include momentary, two level alternate action or multi-switch interlock.

FEATURES

- *Hall effect sensing*
- *Single digital output . . . current sinking or sourcing*
- *3 pin solder/quick-connect terminals . . . easy wiring as remote sensor*
- *Internally threaded flux concentrator . . . also used as mounting means*
- *4.5 to 5.5VDC or 6 to 16VDC supply voltages*

FEATURES

- *Hall effect sensing*
- *Dual digital outputs . . . current sinking or sourcing*
- *4 pin dual-in-line terminals . . . printed circuit board or standard DIP socket mounting*
- *Optional flux concentrator*
- *4.5 to 5.5VDC or 6 to 16VDC supply voltages*
- *Linear output sensor available . . . 4 to 10VDC supply voltage*

FEATURES

- *Hall effect sensing*
- *Single digital output . . . current sinking or sourcing*
- *3 pin in-line printed circuit board terminals . . . standard .100" mounting centers*
- *Smallest ceramic package . . . 0.3" square*
- *4.5 to 5.5VDC or 6 to 16VDC supply voltages*
- *Standard or precision magnetic characteristics*

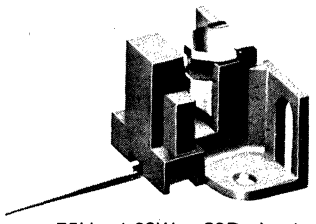
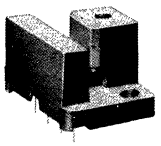
AV Vane operated position sensors



.75H x 1.23W x .58D plus term.
1AV



.43H x .75W x .52D plus term.
3AV/4AV

Principle of operation

AV vane sensors are operated by passing a ferrous vane through the gap between the Hall sensor and the magnet, shunting the magnetic flux away from the sensor.* AV's can be used as limit switches by operating with a single large vane; as tachometer sensors by using a toothed wheel; or, as machinery synchronizing elements by using cams or sectors. 1AV and 4AV Series have many features in common, such as:

- *Operation by a low cost, easy to fabricate ferrous vane*
- *Magnet and sensor incorporated in same rugged package*
- *Sealed construction . . . unaffected by dust or dirt*
- *0 to 100kHz operating speed . . . no minimum speed of operation*
- *On and Off times programmable by vane dimensioning*
- *Precision mechanical operating characteristics*

*See Catalog 20 for vane actuation information.

FEATURES

- *Hall effect sensor*
- *Single digital output . . . current sinking or sourcing*
- *Versatile mounting*
- *3 pin solder/quick-connect terminals or leadwires*
- *6 to 16VDC power supply*
- *Lower operating force*
- *UL Recognized housing and leadwires*

For more information, see Catalog 20, Solid State Sensors.

FEATURES

- *Hall effect sensor*
- *Dual digital outputs . . . current sinking*
- *Small size*
- *4 pin in-line printed circuit board terminals or leadwires*
- *Closely controlled differential to predict pulse width*
- *4.5 to 5.5VDC or 6 to 16VDC power supply*
- *Connector block available*

Application information

DETERMINING MAGNETIC OPERATING CHARACTERISTICS

Magnetic sensing characteristics of Hall effect devices are specified within particular ranges. For example, assume an application with a temperature range of −40° to 100°C using a 513SS16. Referring to the table on page 2, the operate point may be up to 330 gauss and the release point may be 85 to 305 gauss. To insure reliable operation, **at least** 330 gauss must be presented to the sensor. The gauss level must then be reduced below 85 gauss to insure that the sensor will release. Therefore, it is necessary to know the flux density (gauss) measured at the chip to be able to 1) select a device with the best magnetic characteristics for your application; 2) select the best magnet; and 3) verify the desired mechanical characteristics.

The Calibrated Hall Element is used to determine the flux density produced at the sensor by the magnet. The package as well as the sensitive area is identical in size and location to the actual device. The output voltage of the Hall element, as a function of magnetic flux density, is linear, providing an electrical output which is proportional to flux density. A millivoltmeter with a one megohm input impedance should be used to measure the output. A Calibration Curve is furnished with each element, showing the Hall voltage versus flux density. When the magnetic field decreases, the output voltage decreases in a like manner. Referring to the calibration curve, a reading on the voltmeter is easily converted to gauss. Mechanical characteristics can be verified by first plotting a gauss versus distance graph. By comparing the curve to the magnetic characteristics of the sensor the possible mechanical ranges of operate point and release point can be determined.

Once the operating limits of the magnet and sensor combination have been established, feeler gages, etc., may be used during installation to insure that the correct gap is maintained.

CALIBRATED HALL ELEMENTS

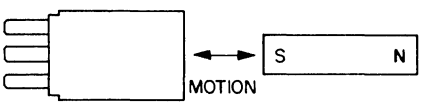
Magnetic characteristics for Hall effect devices are specified within particular ranges. To insure that all devices will operate and release in your application, gauss levels should be verified. Calibrated Hall Elements are available to measure the gauss levels produced in your application. These elements are available in packages similar to the corresponding Hall sensor. The elements are intended for laboratory use only.

METHODS OF ACTUATION

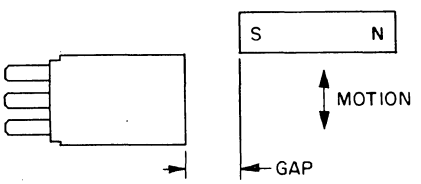
There are many ways to apply MICRO SWITCH solid state sensors. Some of the more common sensing methods are described. Further information is as near as your telephone. Just call your nearest MICRO SWITCH sales office, and one of our trained field engineers will be happy to discuss your application with you.

If you need more information, the handbook Hall Effect Transducers, How to apply them as sensors, is available from MICRO SWITCH. It is intended to assist you in understanding and applying Hall effect devices.

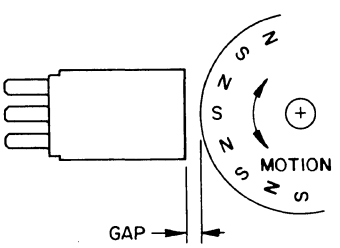
Head-on
The target is centered over the point of maximum sensitivity and is moved "head-on" to the sensor, then backed off.



Slide-by
The target is moved across the face of the sensor at a specified distance.



Rotary
A rotating target, such as a ring magnet, provides an alternating pattern of On-Off actuation.



Vane
The target, a ferrous metal vane, slides through (or rotates through) the gap between magnet and sensor.

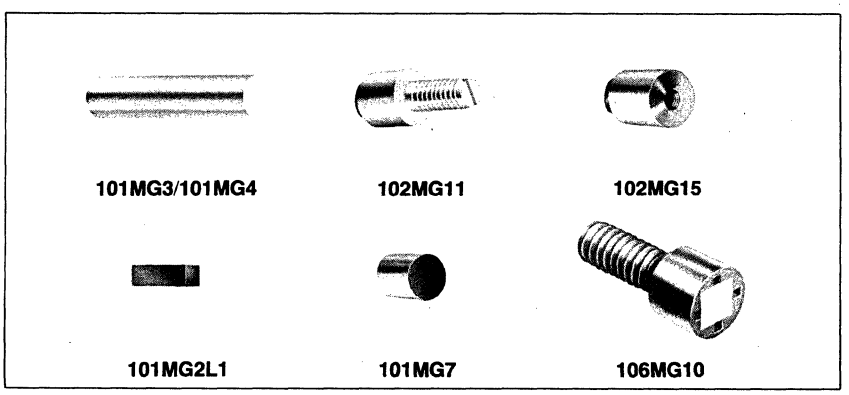
Magnetic Flux	N/A	No limit. Circuit cannot be damaged by magnetic overdrive.			

*Performance at maximum ratings cannot be guaranteed. However, Hall effect sensors will not be damaged unless these ratings are exceeded. Preferred operating characteristics are included in product Order Guides.

MG Magnets

MICRO SWITCH does not manufacture magnets. However, we do supply bar and ring magnets for operating our Hall effect sensors. The most common form of magnet used to operate a Hall effect sensor is the bar magnet. The magnet should provide at least 10% flux overdrive above "Max. Operate", when at minimum distance from the sensing surface.

For magnetic curves, see Catalog 20, Solid State Sensors. Or, contact MICRO SWITCH.



MG ORDER GUIDE

Bar Magnets

Outside Diameter	Length	Catalog Listing
6,3/0.25	31,7/1.25	101MG3
6,3/0.25	31,7/1.25	101MG4*

15,9/0.625	4	105MG5R4

MICRO SWITCH, a Honeywell division

Application information

CURRENT SINKING AND CURRENT SOURCING

Two types of output circuits are common to solid state circuitry . . . current sinking and current sourcing. The names are derived from the location of the load in the output circuit.

Current sourcing (open emitter): The load is connected between the output and ground. The load is isolated from the supply voltage when the sensor is Off. When the sensor turns On, current flows from the power supply through the sensor, into the load. The sensor supplies a "source" of power to the load. A current sourcing output is Normally Low and goes High when the sensor is On.

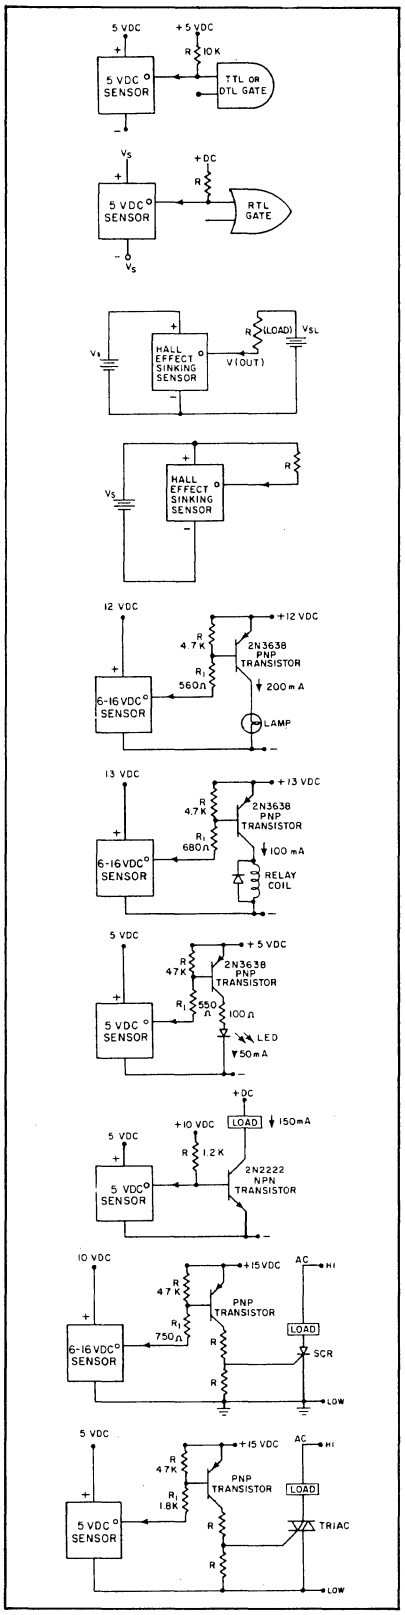
Current sinking (open collector): The load is connected between the power supply and the sensor. In this circuit, the load is isolated from ground when the sensor is Off. When the sensor turns On, the circuit is complete and current flows from the supply through the load, through the sensor and then to ground. The sensor switches, or "sinks" the output current to ground. A current sinking output is Normally High and goes Low when the sensor is On.

INTERFACING FOR MICRO SWITCH HALL EFFECT SENSORS

The schematics shown are typical of the outputs with which MICRO SWITCH Hall effect sensors can be interfaced. Values shown are representative only.

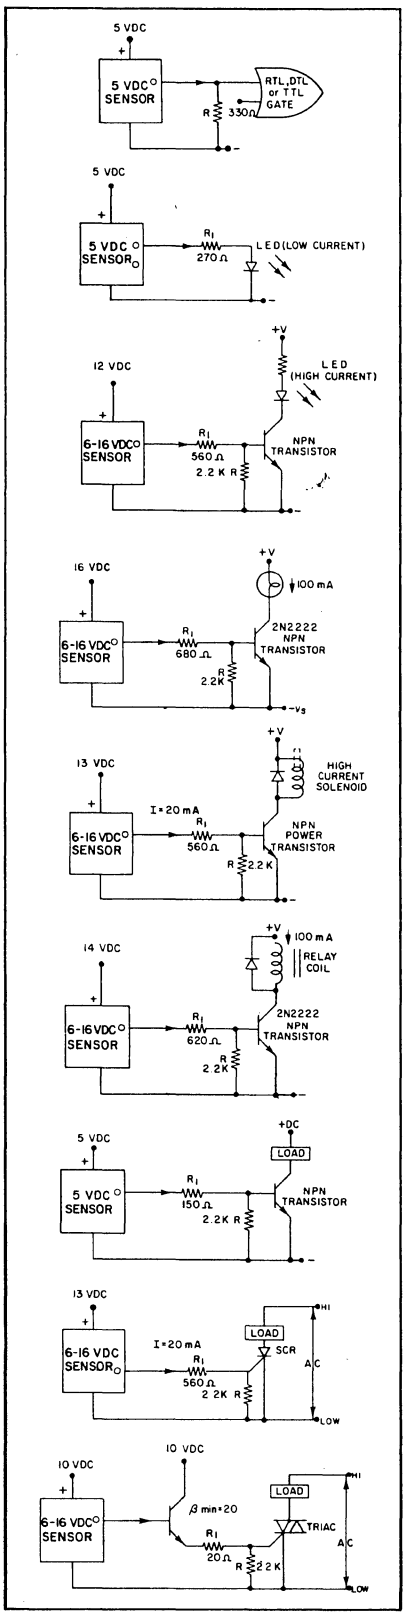
CURRENT SINKING OUTPUTS

(Current flow through load into sensor). Output terminal is open collector. In the unoperated condition (I_L = 0), the output voltage is normally High.



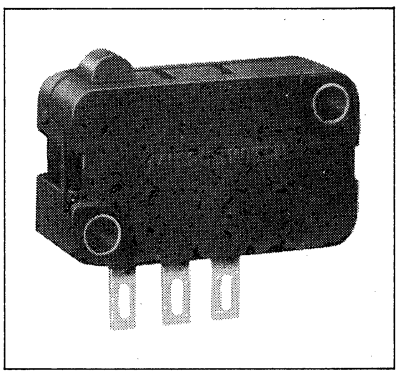
CURRENT SOURCING OUTPUTS

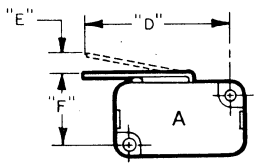
(Current flow from sensor through the load). Output terminal is open emitter. In the unoperated condition (I_L = 0), the output voltage is normally Low.

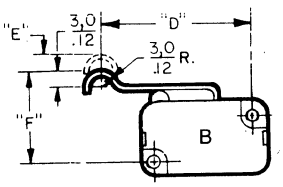


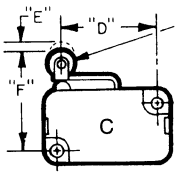
MICRO SWITCH, a Honeywell division

XL Mechanically operated solid state switches









4,8/19 DIA
X 4,8/.19 WIDE
OIL BRONZE
ROLLER
(CONCENTRICITY
0,13/.005 TIR)

FEATURES

- *Hall effect sensor, operated by magnet in plunger*
- *3 pin solder/quick-connect terminals . . . terminal housing available that uses AMP .110" push-on terminals*
- *Single output . . . digital current sinking, Normally High or Normally Low*
- *Low operating forces . . . as little as .15 oz. with lever*
- *Variety of actuator versions . . . uses all standard MICRO SWITCH V3 levers**
- *Same mounting centers as V3 snap-action switch*
- *4.5 to 5.5 VDC or 6 to 16 VDC supply voltages*

*See Catalog 10, Basic Switches

XL mechanically operated Hall effect switches combine mechanical switch operating and mounting convenience with solid state reliability. The mounting dimensions and mechanical characteristics are similar to the popular V3 snap-action switch. Over 500 actuators are possible, including pin plunger, straight levers, simulated roller levers, and roller levers.

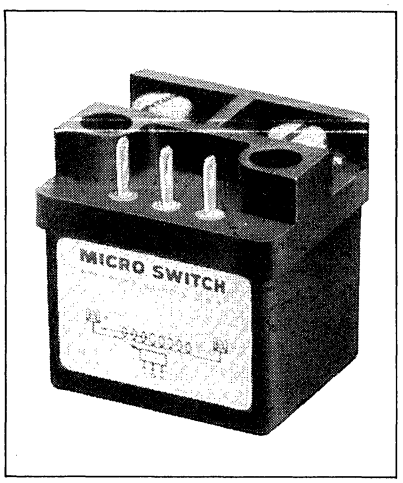
*Typical values. Contact sales office for information on tolerances.
**Other lever styles available. Contact sales office.
‡Lever may not be self-returning.

NOTE: The output transistors of the listings shown are "normally open", i.e., they are not conducting with plunger in free position. To order devices which are "normally closed" (conducting with plunger in free position), substitute 12 for 11 immediately after the XL in the catalog listing. Example: 37XL12XA-1.

Current sensors ES



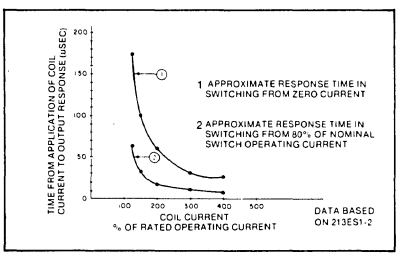
FEATURES

- *Hall effect sensing*
- *Monitors circuit current levels*
- *Fast, reliable indication of presence or absence of current*
- *Digital output signals overcurrent condition*
- *Automatic reset*
- *Operated by magnetic flux produced by current flowing through coil*
- *Very low coil resistance*
- *1500 VAC isolation between coil and Hall sensor*
- *Single 20mA current sinking output . . . 3 pin solder/quick-connect terminals*
- *6 to 16 VDC supply voltage*
- *UL Recognized component*

ES current sensors are used in circuits to sense short circuits or other overcurrent conditions. They produce a digital signal as the current being monitored exceeds a specified value. This signal enables a "circuit breaker" to open the line. The sensors are also used in sequencing and monitoring applications to insure that correct current levels exist.

The ES current sensor is operated by the magnetic flux produced by current flowing through a coil in the device. When coil current exceeds the specified value, the Hall sensor changes state. In DC circuits the output remains ON until coil current is reduced below the release level. For use in AC circuits, contact MICRO SWITCH. The 1500 volt dielectric between the coil and Hall sensor provides isolation between high and low voltage circuits.

RESPONSE TIME VS COIL CURRENT



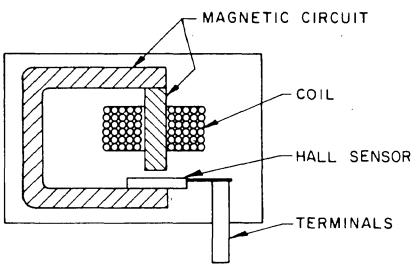
Data shown on the graph is based on the 213ES1-2. Devices with higher coil current ratings produce quicker response times. Lower rated devices produce slightly slower response times. If response time is critical, contact MICRO SWITCH for application assistance.

Operating Characteristics of Hall Sensor

Supply Voltage (VDC)	Supply Current (mA max.)	Current per Output
6 to 16	13.0	20mA max.

Operate current: The required current flow between power terminals which will cause the sensor to change state (operate and release).

Coil resistance: The maximum resistance between input terminals at 25°C.



ES ORDER GUIDE

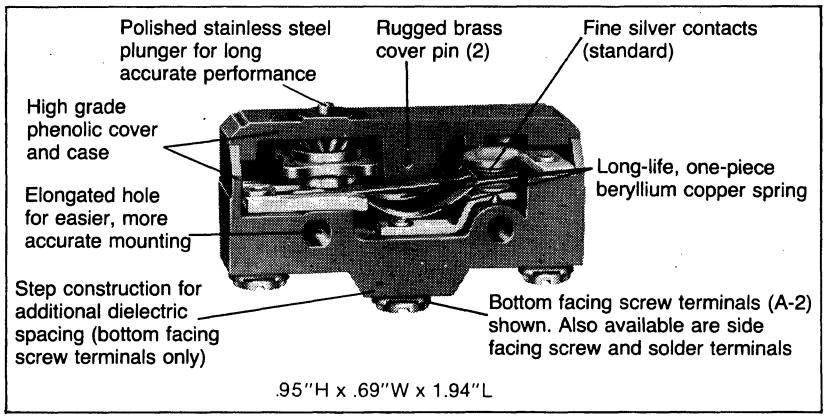
*ES current sensors are factory calibrated for use in DC circuits. AC applications are possible, but should be reviewed by MICRO SWITCH.
**Tolerance applies at 16VDC, 24°C.
① Applies at 25°C, with no heat sink.
② Applies at 80°C, with no heat sink.

MICRO SWITCH, a Honeywell division

BZ/BA Standard basic switches

STANDARD BASIC SWITCH CUT-A-WAY

The cut-a-way shown is representative of the BZ/BA standard basic switches described.



FEATURES

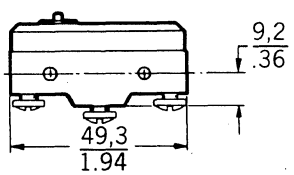
- *Operating force as low as 4 oz. (113 grams) maximum*
- *Sensitive differential travel as low as .0002 to .0003 inches (0,005 to 0,008 mm)*
- *Power load switching capability to 25 amperes*
- *Motor handling capacity to 2 horsepower at 250 VAC*
- *High temperature constructions for up to +400°F (204°C)*
- *Alloy contacts available for special application needs*
- *Variety of integral actuators*
- *Variety of auxiliary actuators*
- *Variety of terminal designs*
- *Optional sealed plunger and cover*
- *Over 50 listings available which meet MIL-S-8805 Qualified products list*
- *UL and CSA listed*

GENERAL INFORMATION

MICRO SWITCH standard basic switches are precision snap-action mechanisms enclosed in accurately molded plastic cases. These switches are carefully manufactured and thoroughly inspected. They are industry-known for their compactness, light weight, accurate repeatability and long life.

AVAILABLE TERMINALS

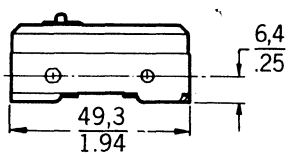
Most of the BZ/BA catalog listings have A2 type terminals. Several other terminal styles are shown and others are available. Specific information should be requested from the nearest MICRO SWITCH Sales Office or local Authorized Distributor.



A2

Bottom facing
6-32 NC x .218"
screw with cup washers

A4 (same as A2 except #8 screws)



Solder

Use up to #14 wire

Characteristics: O.F. — Operating Force; R.F. — Release Force; P.T. — Pretravel; O.T. — Overtravel; D.T. — Differential Travel; O.P. — Operating Position.

MICRO SWITCH, a Honeywell division

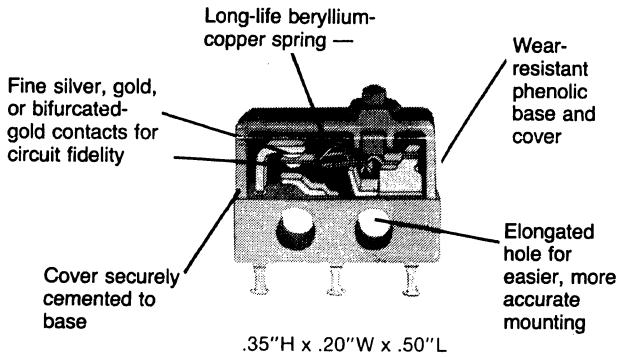
Subminiature basic switches SX



.35"H x .20"W x .50"L

Mounting holes accept pins or screws of .087 inch diameter (2,21 mm) on .19 inch (4,8 mm) centers.

GENERAL INFORMATION

SX subminiature basic switches are the smallest snap-action switches from MICRO SWITCH. These switches are ideal where savings in space and weight are important. Unless otherwise noted, all listings have silver contacts.

FEATURES

- *Low operating force to 3 oz. (85 grams) maximum*
- *Sensitive differential travel as low as .001 inch maximum*
- *Power load switching capability up to 7 amperes — silver contacts*
- *Optional gold contacts for low energy applications*
- *Optional bifurcated gold contacts for maximum reliability*
- *Long mechanical life of 10,000,000 cycles — 95% survival for 11SX series*
- *Temperature tolerance −65° to +250°F (−54 to 121°C) on standard construction*
- *High temperature designs for up to +400°F (204°C)*
- *Variety of integral and auxiliary actuators*
- *Choice of several terminal styles*
- *Listing available which meet MIL-S-8805 Qualified products list*
- *UL and CSA listed*

Characteristics: O.F. — Operating Force; R.F. — Release Force; P.T. — Pretravel; O.T. — Overtravel; D.T. — Differential Travel; O.P. — Operating Position.

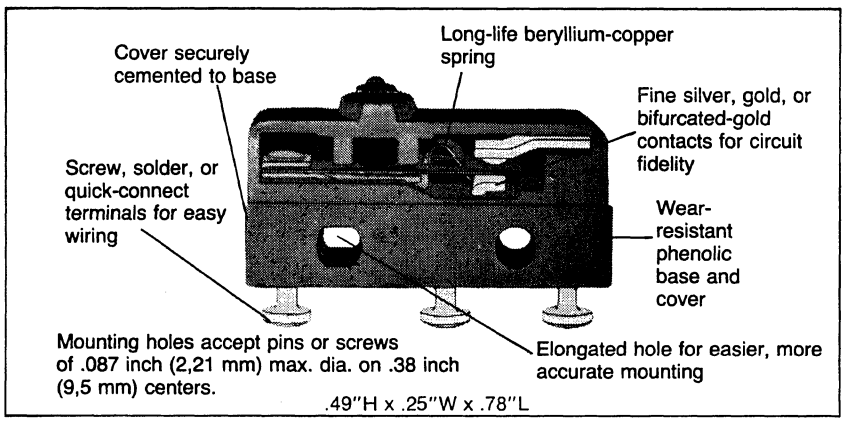
Subminiature basic switches SM

CUT-A-WAY SM SUBMINIATURE BASIC SWITCH

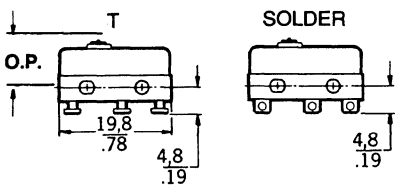


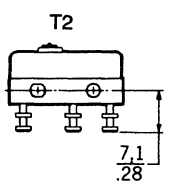
FEATURES

- *Low operating force to 2 ounces maximum.*
- *Sensitive differential travel as low as .001 inch (0,025 mm) maximum*
- *Power load switching capability available to 11 amps (VAC) — silver contacts*
- *Motor load handling capacity to ¼ horse power (VAC)**
- *Optional gold contacts for low energy applications*
- *Optional bifurcated gold contacts for maximum reliability**
- *Long mechanical life of 10,000,000 cycles — 95% survival for 11SM series*
- *Standard temperature range −65° to +180°F (−54 to 85°C)*
- *High temperature construction available for use to +400°F (204°C)**
- *Variety of integral and auxiliary actuators*
- *Choice of several terminal styles*
- *2 listings available which meet MIL-S-8805 Qualified products list.*
- *UL and CSA listed*
- *BEAB and TV-2 construction available**

*Ordering information in Catalog 10.

AVAILABLE TERMINALS





GENERAL INFORMATION

SM subminiature switches are slightly larger than SX switches. These switches combine small size and light weight with ample electrical capacity, precision operation and long life. Unless otherwise noted, all listings have silver contacts.

Characteristics: O.F. — Operating Force; R.F. — Release Force; P.T. — Pretravel; O.T. — Overtravel; D.T. — Differential Travel; O.P. — Operating Position.

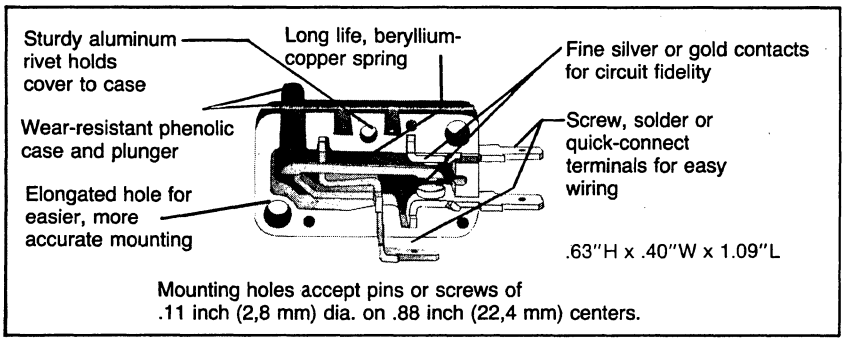
Miniature basic switches V3

CUT-A-WAY V3 MINIATURE BASIC SWITCH



FEATURES

- *Low operating force to .53 ounce maximum*
- *Sensitive differential travel as low as .008 inch maximum**
- *Power load switching capability up to 15 amperes — silver contacts*
- *Motor handling capacity of ½ horse-power — silver contacts*
- *Gold alloy contacts for special applications*
- *Long mechanical life of 10,000,000 cycles — 95% survival for V3-100 Series.*
- *Temperature tolerance up to +180°F (82°C) on standard construction*
- *High temperature construction for use up to +600°F (316°C)**
- *3,1 mm mounting holes available*
- *UL and CSA listed*

*Ordering information in Catalog 10.

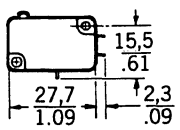
SHORT SOLDER



GENERAL INFORMATION

V3 miniature basic switches feature high electrical capacity and long life. Their size and shape meet design requirements in all types of applications.

Characteristics: O.F. — Operating Force; R.F. — Release Force; P.T. — Pretravel; O.T. — Overtravel; D.T. — Differential Travel; O.P. — Operating Position.

PIN PLUNGER

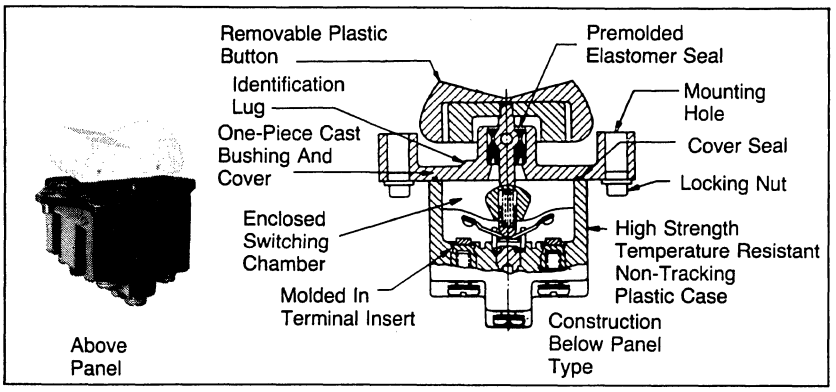
NOTE: Contact a MICRO SWITCH Sales Office for application assistance when actuators will be used at temperatures above 300°F (149°C).

**Travel characteristics on tandem actuators vary with actual basic switch characteristics. These shown are typical for the assembly.

MICRO SWITCH, a Honeywell division

Rocker button switches TP



FEATURES

- *2 and 3 position pushbutton action*
- *Various button colors*
- *1, 2, and 4 pole circuitry*
- *Flush panel and above panel mounting*
- *Temperature range is from −54°C to +71°C (−65°F to +160°F)*
- *UL listed, CSA certified*

SWITCHES WITHOUT BUTTONS

To order switches without buttons, convert catalog listings shown in the order guides. Substitute **TP7** for TP4 and TP16 above panel mounted switches; substitute **TP8** for TP1 and TP12 flush panel mounted switches. Order buttons separately from the chart below.

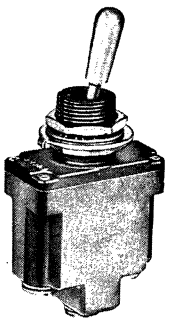
MICRO SWITCH, a Honeywell division

TK Toggle switches



FEATURES

- *Environment sealed enclosure*
- *1 and 2-pole circuitry*
- *2 and 3-position, maintained and momentary toggle action*
- *Temperature range: −40° to +71.1°C (−40° to +160°F)*
- *UL listed, CSA certified*

TK toggles answer the need for an environment sealed industrial grade toggle switch. When mounted with a 15PA87 seal accessory, they meet NEMA 4 requirements on food processing and other industrial panels subjected to periodic washdowns. TK's withstand heavy morning dew found in the cabs of construction and farm vehicles, and beverage spillage.

CONSTRUCTION

There is a premolded elastomer seal between the toggle lever and bushing, and an elastomer gasket seal between the cover and case. Terminal inserts are molded into the case.

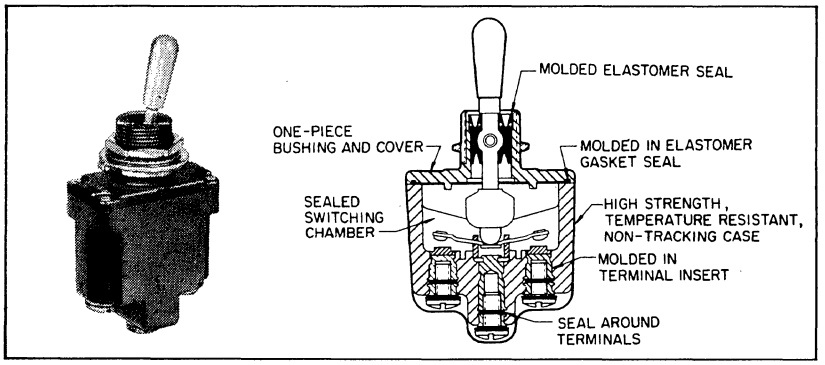
TK's embody many of the time-proven construction features of the TL design, such as: spring-loaded actuating mechanism for direct-action operation and excellent tactile feedback; stepped terminals, which aid non-shorting wiring connections; and a high strength non-tracking case, which promotes electrical stability.

TERMINAL CIRCUIT IDENTIFICATION

Terminal identifications are refered to in the Ordering Charts to indicate which circuits are made in each toggle position (i.e. 1-2 reference indicates circuit closure through terminals 1 and 2.)

MICRO SWITCH, a Honeywell division

Toggle switches TL



FEATURES

- *Qualified to MIL-S-3950*
- *Environment-proof sealing*
- *1, 2, and 4 pole circuitry*
- *Standard and pull to unlock levers*
- *2 and 3 position, maintained, and momentary toggle action*
- *Temperature range: −65°C to +71°C (−85°F to +160°F)*
- *UL listed, CSA certified*

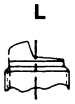
*Marked toggle positions are momentary. All other positions are maintained.

LOCKING CONFIGURATIONS FOR TL, 13AT AND 23AT SERIES ONLY

When ordering pull-to-unlock toggle listings, add the suffix letter shown in the chart below to the standard toggle listing and the MS number. For example, to order a 1TL1-1 pull-to-unlock toggle switch with the lever locked in the center position, add the letter **E**; i.e., 1TL1-1**E**, MS-24658-21**E**.

A	B	D	E	F	G	H
Locked In Three Positions	Locked In Center and Extreme Position (Keyway Side)	Locked Out Of Center Position	Locked In Center Position	Locked In Extreme Position (Opposite Keyway)	Locked In Extreme Position (Keyway Side)	Locked Out Of Center And Extreme Position (Keyway Side)

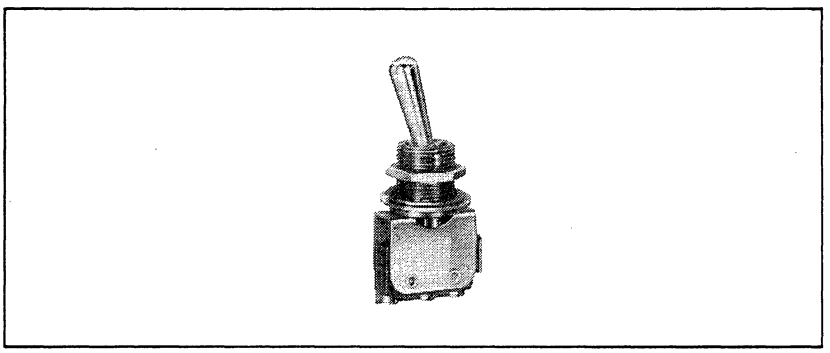
J	K	L	M	N	P
					


Locked Out Of Center And Extreme Position (Opposite Keyway)	Locked In Center And Extreme Position (Opposite Keyway)	Locked Out Of Extreme Position (Keyway Side)	Locked Out Of And Into Extreme Position (Opposite Keyway)	Locked Out Of Extreme Position (Opposite Keyway)	Locked Out Of And Into Extreme Position (Keyway Side)

MICRO SWITCH, a Honeywell division

Toggle switch assemblies AT

6AT SERIES



FEATURES

- *2-position, momentary and maintained action*
- *1, 2 or 3 SPDT precision basic switches*
- *Short behind-panel depth*
- *Choice of ¼ or 15/32-inch bushings*
- *Silver contacts (gold available)*
- *UL listed, CSA certified basic switches*

ELECTRICAL RATINGS

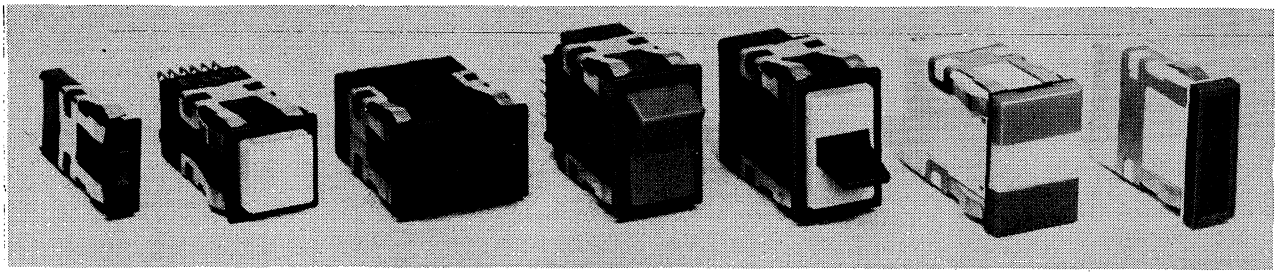
MICRO SWITCH, a Honeywell division

AML Advanced manual line



AML's classic design blends with other panel components to enhance total display harmony. Well-accepted as the only comprehensive line of its kind, AML features uniformly functional and attractive pushbuttons, paddles, rockers, indicators, and annunciators. LED, incandescent, and neon illumination . . . solid state to electronic and power duty control.

AML electrical data ..... p. 26
Solid state pushbuttons AML11/12 ..... p. 27
Power duty pushbuttons AML31/32 ..... p. 27
Electronic control pushbuttons AML21/22 ..... p. 28

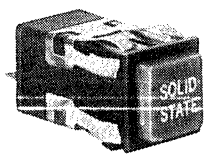
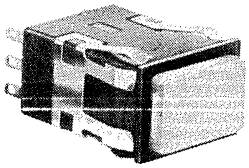
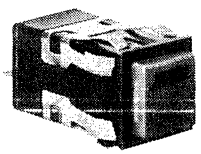
MICRO SWITCH, a Honeywell division

Solid state pushbutton switches AML11/12







AML11 non-lighted or incandescent illuminated

Buttons (AML51) and incandescent lamps (AML91) are ordered separately.

AML12 w/integral LED indicator

LED "window" buttons (AML52) are ordered separately.

FEATURES

- *Hall effect reliability. (For electrical specifications, refer to facing page.)*
- *Low voltage signal interfaces with nearly all DC logic.*
- *5 or 6-16 supply voltage.*
- *UL recognized.*

AML11 B

2

Terminal Type
2 .110 x .020 (Solder or Quick-Connect)
3 .025 x .025 (Printed Ckt. or Push-On)

AA

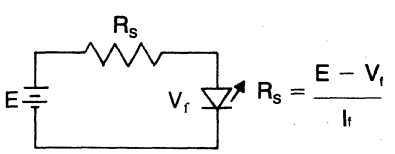
Circuitry Codes (Each pole has double-throw)	
Silver Contacts	Mom. Action **AA** 1-Pole **AC** 2-Pole
	Alt. Action **AB** 1-Pole **AD** 2-Pole
Gold Contacts	Mom. Action **BA** 1-Pole **BC** 2-Pole
	Alt. Action **BB** 1-Pole **BD** 2-Pole

Additional AML21 Options: Full guard bezel, 4 poles, and rectangular housings with two lamp circuits.

Additional AML22 Options: Full guard bezel, integral diode protection for LED, 15 V LED voltage, and 4 poles.

LED Application Notes:

1. Internal resistors control LED current to nominal 20 mA on 5 VDC devices.
2. Devices without internal current-limiting resistors require suitable external control of the LED current.
3. A minimum of 5 VDC open circuit voltage with an appropriate series resistance should drive the LED. This minimizes effect of temperature (current variation) on forward voltage of LED.
4. Reverse breakdown voltage of LED is 5 volts min.
5. Following example includes a simple DC drive circuit and equation used to determine value of series resistance.



$$R_S = \frac{E - V_f}{I_f}$$

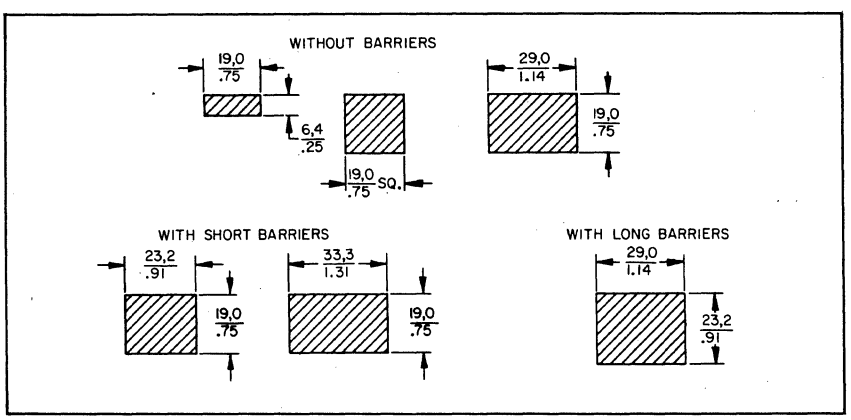
Where: R_S = Series Resistance
E = Supply Voltage
V_f = Forward Voltage of LED
I_f = Circuit Current

If a diode is added in series for reverse polarity protection then:

$$R_S = \frac{E - V_f - V_{PD}}{I_f}$$

Where: V_{PD} = Forward Voltage of Protection Diode

PANEL CUTOUTS FOR SINGLE SWITCHES/INDICATORS

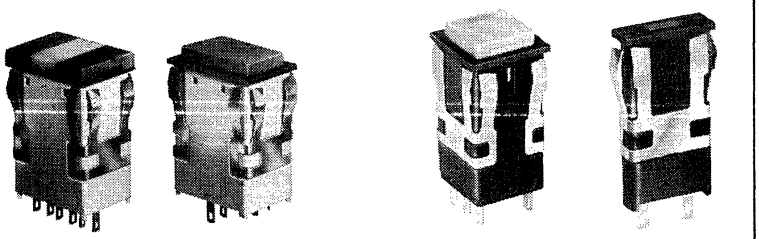


MICRO SWITCH, a Honeywell division

Lighted indicators AML41/42

FEATURES

- *Choice of incandescent or LED illumination.*
- *UL listed, CSA certified (except LED indicators, which are UL recognized).*



AML41 incandescent illuminated pushbutton style (left) and lens style.

AML42 LED pushbutton style (left) and compact style.

AML41 pushbutton style indicators match display of incandescent illuminated switches.

Lens style indicators use a special cap-like button which covers the bezel to present a larger display area, without affecting family appearance. Up to 3-lamp split screen capability.

Note: Buttons (AML51) and incandescent lamps (AML91) ordered separately.

AML41 ORDER GUIDE

MICRO SWITCH, a Honeywell division

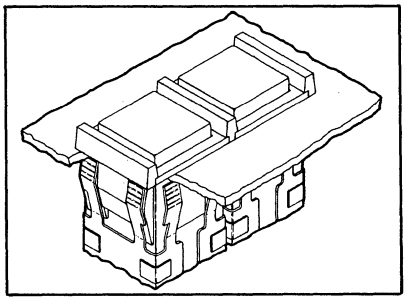
AML Advanced manual line accessories

BARRIERS



When mounting an individual unit, an end barrier is attached to each side of housing. The center barrier is used in a slot mount array (see drawing).

FEATURES

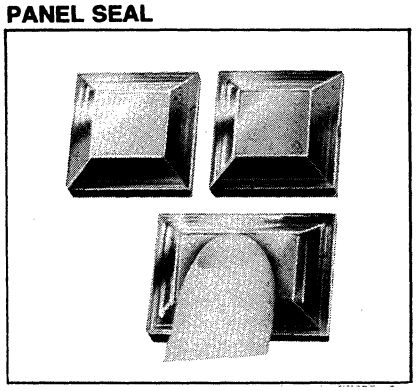
- *Helps prevent inadvertent actuation of two pushbuttons with a single push.*
- *Front of panel mounting simplifies installation.*

AML71 ORDER GUIDE

Barriers shown in order guide are black. They are not for use with AML61 mounting hardware; or with AML41J, AML41K, or AML41L lens type indicators or AML45 annunciators.

Barrier Length	Type	Catalog Listing
Short Barrier (For use with square devices and short side of rectangular devices.)	Center	AML71SCB
	End	AML71SEB
Long Barrier (For use with long side of rectangular devices.)	Center	AML71LCB
	End	AML71LEB

PANEL SEAL



AML75 panel seals are used to help protect pushbutton switches and indicators from contamination from accidental beverage spills, dust and dirt.

FEATURES

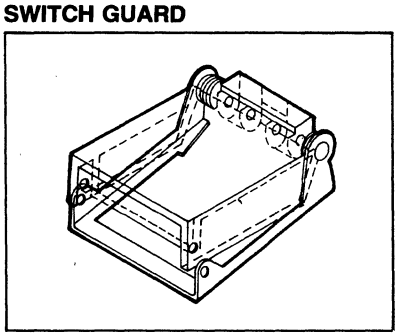
- *Easy to install, without tools.*
- *No effect on display color, light intensity, or legend quality.*
- *Replace seal or lamps without demounting switch.*

AML75 ORDER GUIDE

Panel seals are not for use with AML61 mounting hardware: or with AML41J, AML41K, or AML41L lens type indicators.

Description	For Use With: Square .19" high buttons	Rectangular .19" high buttons
Base & Seal	AML75ABC	AML75BBC
Base Only	AML75ABN	AML75BBN
Seal Only	AML75ANC	AML75BNC

SWITCH GUARD

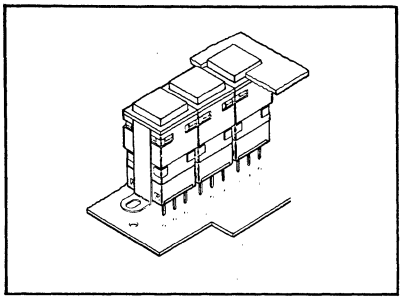


AML76 switch guard protects square and rectangular .19-inch standard height pushbuttons from inadvertent actuation. Not for use with AML61 mounting hardware, AML71 barriers or full guard bezel housings.

AML76 ORDER GUIDE

Guard Type	Catalog Listing
Square	AML76C10T01P
Rectangular	AML76F10T01P

MOUNTING HARDWARE

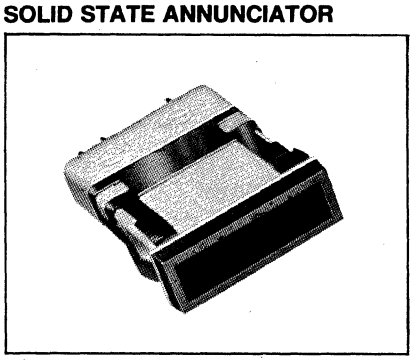


AML61 mounting hardware enables subpanel mounting of devices in factory assembled metal cans which are welded together in strips or matrices.

FEATURES

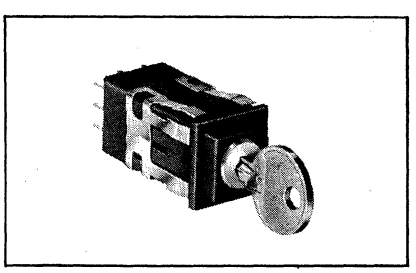
- *L-shaped mounting brackets conform to various panel thicknesses, using spacers.*
- *Simplifies panel fabrication, since only one large cutout is required.*
- *Facilitates printed circuit board mounting. For ordering information, refer to Catalog 30.*

SOLID STATE ANNUNCIATOR



AML45/59 solid state annunciators display messages which are backlighted by two LED's. Choice of full face one-color or two-color display, in red, green, and yellow.

KEYLOCK SWITCH

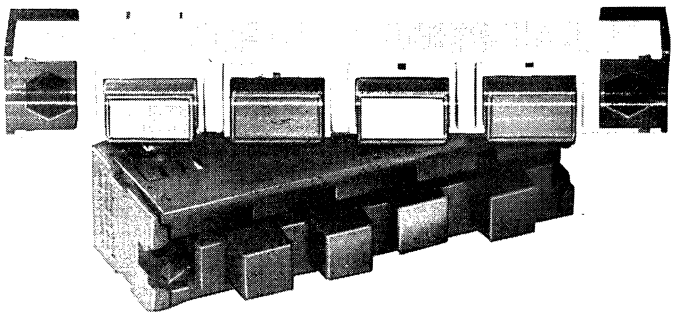


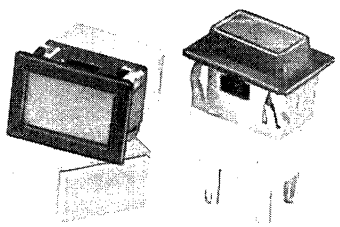
AML27 keylock switches enable control of access to computer peripherals, keyboards, point-of-sale terminals, security systems and other locations where tampering must be discouraged.

For ordering information, refer to Catalog 30.

MICRO SWITCH, a Honeywell division

Miniature manual line pushbutton switches MML





MICRO SWITCH MML Series Miniature Manual Line pushbutton switches deliver a large measure of design freedom in a miniature size package. Their attractive low-profile appearance answers space and styling needs of your future computer/business, instrument, and communication equipment. MML's many design options and modular ordering system provides you flexibility to choose the mounting options, lens colors, illumination means, electrical ratings, and circuitry/operating action combinations (including multi-switch interlock) that best meet your application needs.

HOW TO ORDER

Switches, indicators, lenses, LED's, incandescent lamps, bezels/mounting clips, strip mounting frames, end rails for matrix mount, and multi-switch interlock assemblies are ordered as separate items. To order assembled combinations to meet your special needs, contact your nearest MICRO SWITCH sales office.

Refer to the order guides to specify desired MML catalog listings.

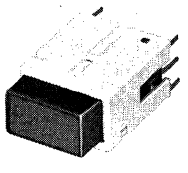
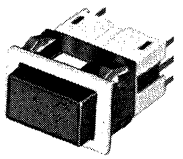
MICRO SWITCH, a Honeywell division

MML11 Solid state pushbutton switches



PWB Mount



Panel Mount

Use as an unlighted pushbutton or add one LED or incandescent lamp for lighted display.

Order LED's (MML92) and lenses (MML52) or incandescent lamps (MML91) and lenses (MML51) separately

CURRENT SINKING OUTPUT
A permanent magnet plunger moves adjacent to the Hall effect integrated circuit to give a digital, current sinking (normally high and normally low) output.

FEATURES
- LED, incandescent, or non-lighted display
- Hall effect reliability
- Provides low voltage signals that interface with nearly all DC logic
- 5 VDC supply voltage
- Momentary action or 2-level alternate action
- Printed wiring board or panel mounting
- Legendable lenses
- Designed to comply with UL, CSA

MML11 ORDER GUIDE

MML92EYH	Yellow	2.2V	3.0V	HLMP-3466

MML93 ORDER GUIDE

Catalog Listing

MML93K

LED receptacle, with printed wiring board, ⅛-turn base. No LED furnished.

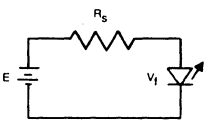
LED APPLICATION INFORMATION

To insure stable conditions, suitable external control of the LED current must be provided. It is recommended that a minimum of 5 VDC open circuit voltage with an appropriate series resistance be used to drive LED devices. This minimizes current variation and its effect on temperature and forward voltage of the LED.

Maximum drive current is 30 mA. Reverse voltage breakdown of the LED's is 4 volts (min).

Resistor values can be determined by supply voltage or current for LED:

$$R_S = \frac{E - V_f}{I_f}$$

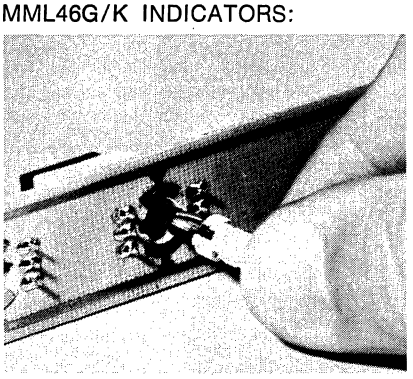


WHERE: R_S = Series Resistance
E = Supply Voltage
V_f = Forward Voltage of LED
I_f = Circuit Current

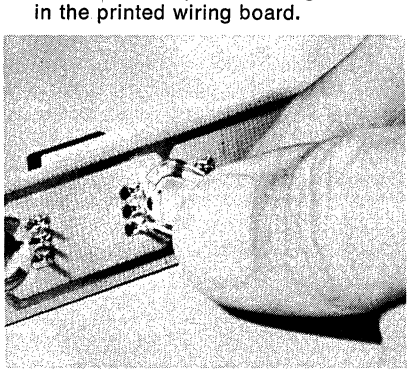
HOW TO INSTALL LED's

With MML93K Printed Wiring Board Receptacle

MML11/21 SWITCHES AND MML46G/K INDICATORS:



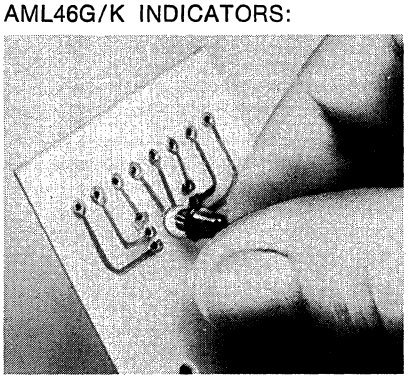
1. After installing an MML11/21 switch or MML46G/K indicator, insert the LED/PWB receptacle through a hole in the printed wiring board.



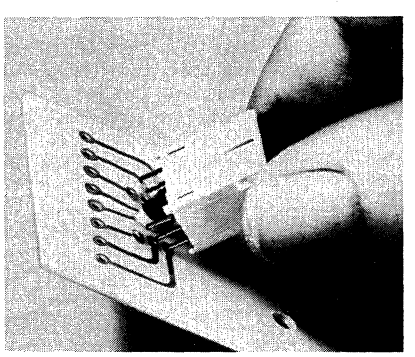
2. A ⅛-turn applied clockwise to the receptacle locks it in the printed wiring board and establishes the electrical connection.

With Solder Termination to Printed Wiring Board

MML11/21 SWITCHES AND AML46G/K INDICATORS:



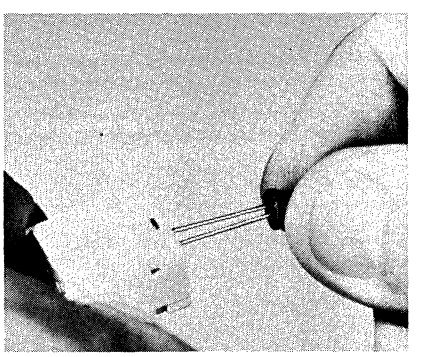
1. Assemble stand-off spacer to MML92E LED terminals and seat on printed wiring board.



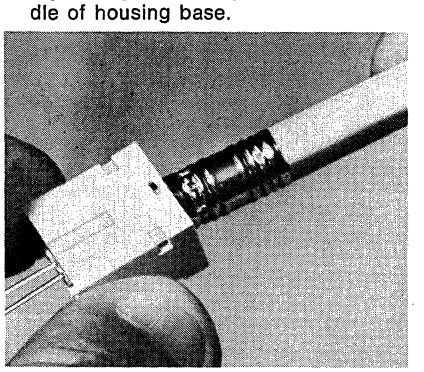
2. Seat housing on printed wiring board, with LED projecting into hole at the base of the housing.

With Solder Termination to Printed Wiring Board or Leadwire

MML44 INDICATORS:



1. Assemble LED to MML44 indicator, with MML92E LED terminals protruding through assembly slot in the middle of housing base.

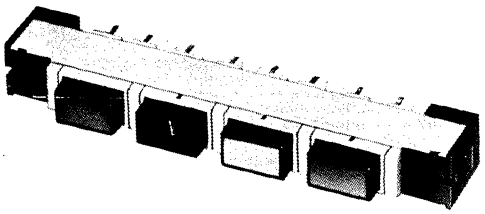


2. Use of pencil eraser to snap LED securely in place.

MICRO SWITCH, a Honeywell division

Mounting hardware MML61/62/72

MML61 STRIP MOUNTING FRAMES



Switches and indicators are ordered as separate items.

FEATURES

- Provides back of panel or printed wiring board mounting in a multi-unit strip of switches/indicators.
- Devices can be pre-wired prior to installation.
- Holes at each end of frame will accept No. 4 screws.

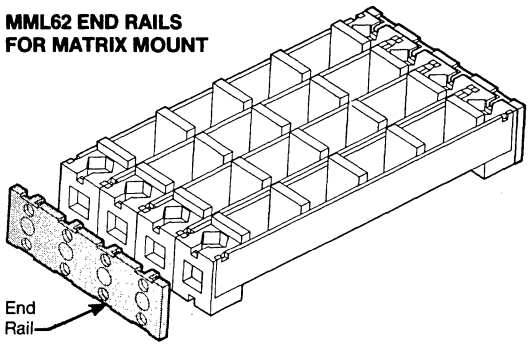
MML61 ORDER GUIDE

MML61E 5

Orientation/Color	No. of Stations
MML61E Horizontal, white	**1** One
MML61K Horizontal, black	**2** Two
	3 Three
	4 Four
	5 Five
	6 Six
	7 Seven
	8 Eight
	9 Nine
	10 Ten

Example: **MML61E5**
White 5-station strip mounting frame, horizontal orientation.

MML62 END RAILS FOR MATRIX MOUNT



FEATURES

- Fasten up to ten MML61 strip frames together to form matrix array.
- End rails snap fit into slots at each end of the strip frames.

MML62 ORDER GUIDE

Each catalog listing includes a pair of end rails.

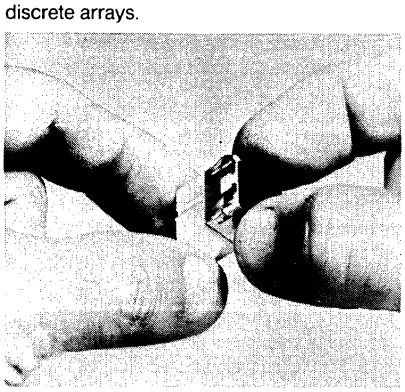
MML62E 4

Color	No. of MML61 Strip Frames in Matrix
MML62E For horizontal strips, white	**2** Two
MML62K For horizontal strips, black	**3** Three
	4 Four
	5 Five
	6 Six
	7 Seven
	8 Eight
	9 Nine
	10 Ten

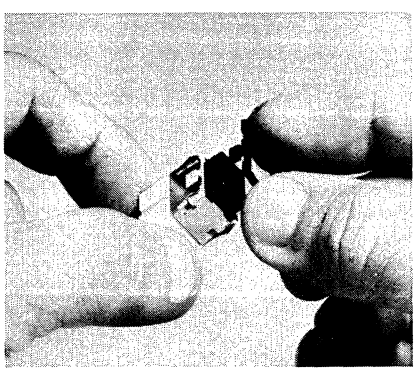
Example: **MML62E4**
White end rails for fastening four horizontal strips.

MML72 BEZELS/MOUNTING CLIPS

Bezels and mounting clips are assembled to switches and indicators to provide snap-in front panel mounting in horizontal rows or discrete arrays.



1. Slip mounting clip over top of switch/indicator housing.



2. Snap bezel onto mounting clip.

MML72 ORDER GUIDE

(Includes mounting clip.)

MML72EE W

Bezel Type	Color
MML72EE Switch	**K** Black
MML72EG Indicator	**L** Gray
	W White

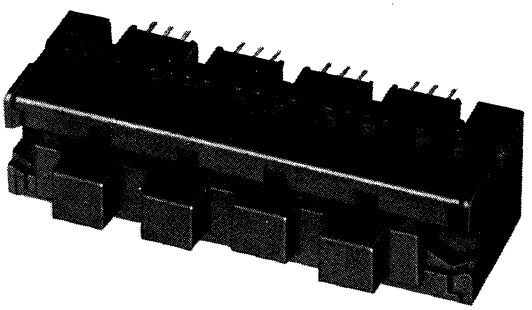
Example: **MML72EEW**
White switch bezel with mounting clip.

NOTE:
To order mounting clips separately, specify **MML73EA**.

MICRO SWITCH, a Honeywell division

MML Interlock assemblies

MECHANICAL INTERLOCK
Mechanically interlocked switches with 1-4 pole circuitry provide latching functions. They are furnished **factory assembled** in a strip frame — ready for back of panel and/or printed wiring board mounting. Each end of the strip frame has mounting holes which will accept No. 4 screws.



Operating Mode. Depressing a switch button will release any previously operated button within a group of interlocked switches. One button is always being held down by a mechanical detent. This provides a "key-down memory" feature which indicates which switch was last operated. Circuit transfer is maintained until another button is depressed.

Override release. If two or more interlocked switches are inadvertently engaged at the same time, fully depressing any engaged switch button will release the others. (An increased actuation force is necessary for override.)

Assembly options. The following options are possible:
1. A strip of two to ten interlocked switches.
2. More than one group of two or more switches can be independently interlocked, providing there is a one-unit spacing between the groups. For example, the first four switches and the last five switches in the strip can be interlocked as separate groupings, with a one-station spacing between them.
3. A strip can include both interlocked groups of switches and switches which operate in their normal momentary or alternate action mode.

HOW TO ORDER
Only the momentary action **MML82** Electronic Control interlock switches can be used for interlocking. **MML82** alternate action switches and **MML83** Power Duty switches function as individually isolated units when added to the interlock strip.

Use the **MML88** Interlock Strip Assembly Order Sheet (FO-74023) on page 12 to specify the desired switch listings and their location in the strip. Reproduce it on your office copier or request a pad of forms from your nearest MICRO SWITCH Sales Office. (See completed example.)

MICRO SWITCH
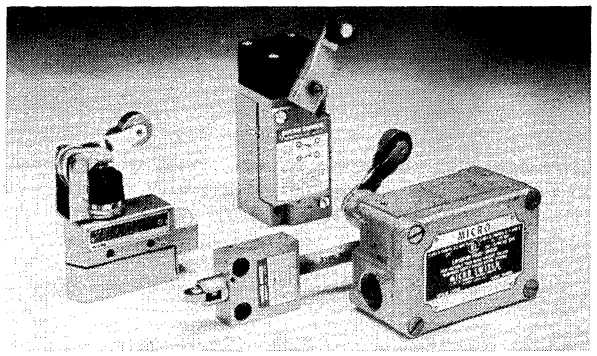
FREEPORT, ILLINOIS, U S A
FO-74023

Other MICRO SWITCH products

MICRO SWITCH's reputation as an innovator in the design and manufacture of quality position sensing and manual control products spans 40 years. Shown is a cross-section of the many varieties. This broad selection offers a wide range of technologies, sizes, actuation means, circuitries, electrical capacities, and terminations, for in-plant and original equipment needs.

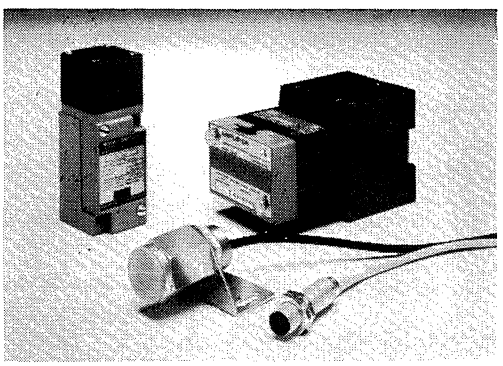
Contact your nearest MICRO SWITCH Sales Office or Authorized Distributor for complete catalog information. Sales Office location's are shown in this Directory. Authorized Distributors are listed on the next pages.



Limit and enclosed switches

MICRO SWITCH offers the world's most advanced line of heavy duty limit switches and a wide selection of application proven enclosed switches (precision snap-acting switches sealed in rugged metal housing). Sealed versions keep out moisture and other contaminants. Explosion-proof types are designed for use in hazardous locations.

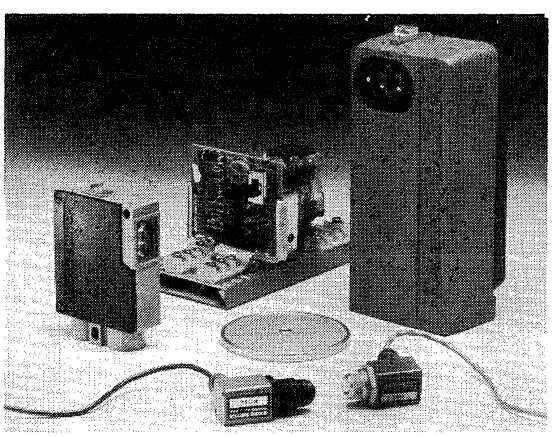
Request Catalog 40.



Proximity sensors

Proximity sensors detect the presence of metals or react to a magnetic field. Cylindrical, cannister, and limit switch style housings provide application versatility. Their high speed operation keeps pace with production. Models are available for operation at A.C. line voltage or 8.5 to 30 VDC. Optional LED indicators signal on-off condition.

Request Catalog 50.

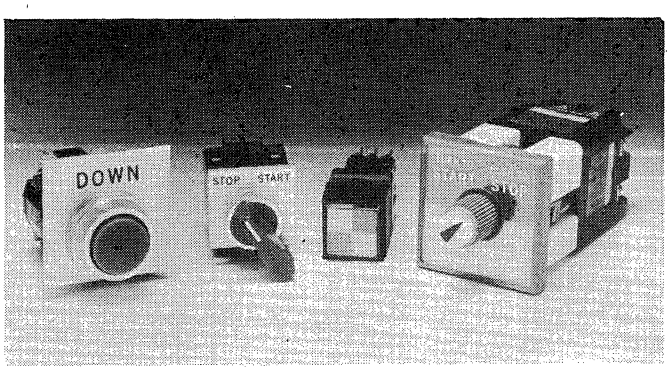


Photoelectric sensors

MICRO SWITCH has a complete offering of modulated LED and incandescent controls. These no-touch devices detect opaque or translucent material at long or short range.

Single unit retroreflective and separate emitter/receiver styles fill a variety of application requirements. High intensity models penetrate foggy, dusty, and other poor visibility conditions. Scanning capability ranges from a fraction of an inch to hundreds of feet.

Request Catalog 60.



Oiltight manual controls

Featuring a contemporary square appearance and lighted display, these families offer a wide selection of industrial pushbuttons, selectors, and indicators. Standard, miniature, and compact sizes provide flexibility in format and circuitry. Contact blocks feature heavy duty, standard or electronic duty capabilities plus solid state.

Request Catalog 70.

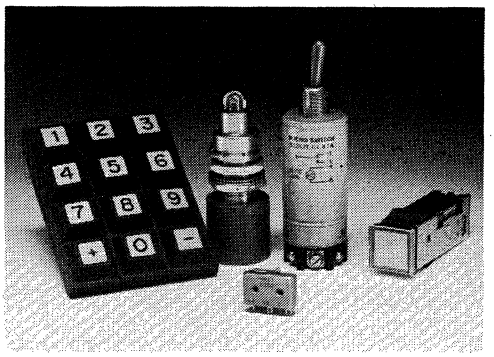
MICRO SWITCH, a Honeywell division

Other MICRO SWITCH products

Environmentally protected switches

Rugged, high performance designs; environment-proof or hermetically sealed. A complete selection includes miniature limit switches, miniature and standard size basic switches, sealed toggle switches and the highest quality lighted pushbuttons.

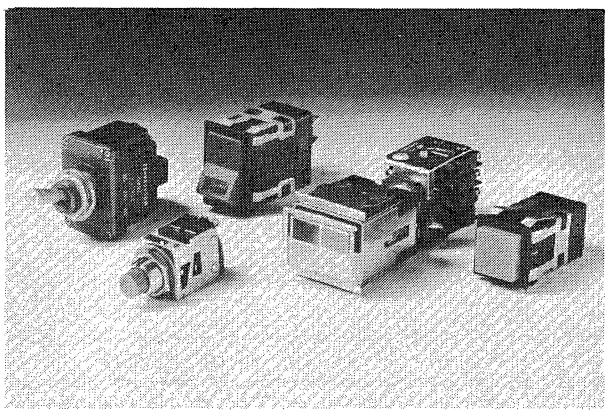
Request Catalog 80.



Manual control switches

Whether you're prototyping a new design or planning to face-lift an existing panel, you'll benefit by considering the wide selection of pushbuttons, indicators, toggles, rockers, paddles, rotary selectors and interlock switches available from MICRO SWITCH. Developed with adherence to good human factors principles, these products aid the designer by offering almost limitless options in visual display techniques, operators, and arrangement of components. Many are military qualified.

Request Catalog 30.



Keyboards

MICRO SWITCH offers the world's widest selection of keyboard designs. It includes capacitance membrane and contact membrane keyboards in standard or low-profile versions; touch panels; and time-proven solid state Hall effect keyboards. With our experienced application engineers and complete capabilities, we can handle virtually any keyboard application.

For further information contact your local MICRO SWITCH sales office.

Pressure transducers

MICRO SWITCH piezoresistive pressure transducers accurately measure gaseous pressure as the sensitive silicon diaphragm integral to the IC chip distorts ever so slightly, resulting in linear output voltage directly proportional to pressure.

Both signal conditioned (amplified and temperature-compensated) and unamplified transducers of absolute, differential, and gage pressure design are available. Applications range from medical instruments to home appliances to altimeters. Accurate repeatability, low hysteresis, and long-term stability are characteristics of these transducers, whose pressure range extends to 250 psi.

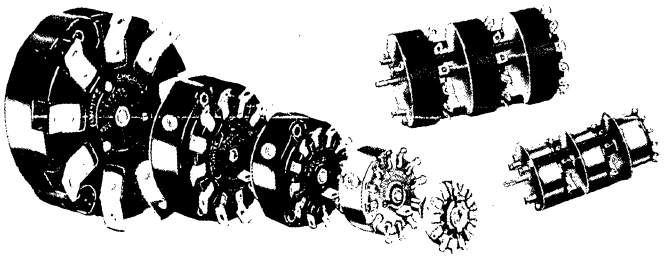
OHMITE® power tap switches, high current, non-shorting type



INTRODUCING

MODEL 711

Smallest Switch for Its Rating
7 Amps, 125 Volts

All Ohmite switches feature the slow-break, quick-make action deemed so desirable for switching of AC current.

All models except 711 feature all ceramic, arc-proof bodies and solid silver alloy, fixed and movable contacts. The large, thick, silver-alloy fixed contact disks are permanently welded to copper studs. These, in turn, are riveted and soldered to sturdy terminal lugs, assuring a permanent mechanical and electrical joint. The rotor (moving) contact, also of solid silver-alloy, is riveted and soldered to the contact arm. Face of the rotor contact is slightly rounded assuring a perfect seating of the contacts with a slight rubbing, self-cleaning motion on every operation. Models 111, 212, 312 and 412 are UL listed.

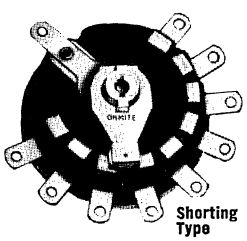
The new Model 711 tap switch was designed to achieve high current capability with small size. It is actually smaller than many low current instrument switches. It interrupts 7 amperes at 125 VAC and can carry 15 amperes AC or DC. The Model 711 features a melamine phenolic body with solid silver-alloy fixed and movable contacts.

All models can be provided as 2-in-tandem or 3-in-tandem (except Model 111) assemblies.

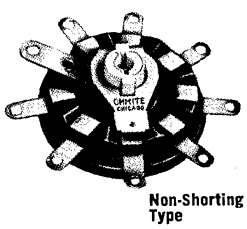
TO ORDER indicate model, followed by a dash and the number of taps required. If tandem assemblies are desired, add another dash, followed by T2 or T3 to indicate total number of switches in the assembly. Thus 212-6-T2 would indicate two 20 amp switches with 6 taps, in tandem. A single switch would be 212-6.

Model	Alternate Current Rating		Diameter	Shaft Diameter	Max. Panel Thickness	Weight	No. of Taps
	Amps.	Volts					
711	7	125	1 1/8"	1/4"	1/8"	.047 lb.	3-11
111	15	125	1 3/4"	1/4"	1/4"	.16 lb.	3-11
212	20	150	2 1/4"	1/4"	1/4"	.4 lb.	3-12
312	30	300	3 5/16"	1/4"	1/4"	.75 lb.	3-12
412	50	300	4 3/16"	1/4"	1/4"	1.4 lb.	3-12
608	100	300	6"	3/8"	1"	5 lb.	3-8

ALL CERAMIC OPEN TYPE TAP SWITCHES



Shorting Type



Non-Shorting Type

Designed to transfer currents of several amperes in circuits requiring high voltage insulation. Ceramic body construction. Monel metal taps; silver-graphite brush.

Switches up to 8 taps are approximately 3 1/4" diameter including lugs; 9 to 12 tap switches are approximately 4 1/4" diameter. Switches can be ordered assembled 2 to 3 in tandem. Single hole mounting by means of 3/8" diameter bushing and hexagon nut accommodates panels up to 1/4" thick (maximum).

Maximum current capacity is 7 amperes but only 3 amperes at 120 V.A.C. should be interrupted. Current ratings are less for all direct current circuits above 20 volts, for inductive circuits and high voltages.

OHMITE® OHMITROL solid state power and motor speed controls

FEATURES:

- Conserves space & power
- Smallest 1 & 2 KW control
- AC & DC output types
- Built-in on-off switch
- Adjustable control range
- Choice of component & portable styles
- Long life

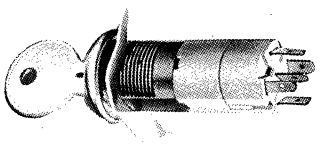
OAK SWITCHES

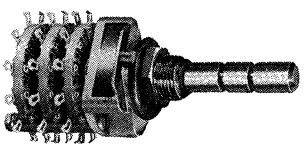


OAK ANTI-STATIC KEYLOCK SECURITY SWITCH

¾" diameter security switches provide up to 20 kV static protection for sensitive electronic circuitry. Supplied with stainless steel bezel and two brass keys. Keyed alike for each part number. Key pull in all positions. Single pole only.

SPECIFICATIONS

Operating Life: Tested to 10,000 cycles.
Switching: Enclosed; SPST, SPDT, SP3T
Throw: 90°.
Operating Torque: 7 to 16 in. oz.
Temperature Range: 0° to +85°C
Positive Detenting Stops: Integral with lock.
Housing: Zytel 101, Gray.
Switch Terminals: Copper alloy, silver plated.
Contact Material: Copper alloy, silver-plated.
Barrel: Zinc alloy, chromate dipped.
Bezel: Stainless steel.
Keys: Brass (2)
Hex Mtg. Nut: Cadmium plated steel.
Elec. Ratings: 1.0 A @ 28 Vdc
4.0 A @ 120 Vac
2.0 A @ 240 Vac
Contact Resistance: 10 milliohms (nominal). All switches make before break. UL and CSA listed. Specifications through rated life after break in.

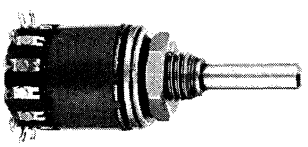


OAK TYPE AM (ACORN) ROTARY SWITCH

1" diameter with patented Unidex® detent action. Double-wiping and self-cleaning contacts.

SPECIFICATIONS

Size: 1" dia. (nom.), 1 to 3 sections.
Mounting: ⅜" dia. with locating key.
Shaft: 0.250" dia. x 1½" grooved (breakoff).
Indexing: Dual ball 30°.
Stop Strength: Fixed — 15 in. lbs.
Adjustable — 10 in. lbs.
Terminal Strength: 2½ lb. pull.
Stator: Diallyl phthalate (MIL-M-14).
Rotor: Thermoplastic.
Contacts: Brass, silver plated and protected.
Contact Resistance: 0.003 to 0.015 Ohms between adjacent clips.
Elec. Rating: Break 0.5 A @ 28 Vdc, 0.25 A @ 110 Vac (resistive). Carry 5.0 A.
Life: 10,000 cycles at rated load (min.).
Temperature: −65° to +85°C.
Hardware: Nut, lockwasher, stopwasher.
Finish: Withstands 50 hr. MIL-S-3786 salt spray.



OAK ½" ROTARY SWITCH

A superior subminiature switch with negligible contact noise and circuit resistance.

SPECIFICATIONS

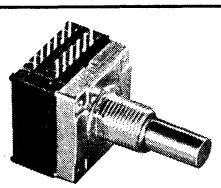
Size: ½" (nominal).
Mounting: "D" hole, ¼" bushing.
Shaft: ⅛" dia. x ¾".
Indexing: 30°, up to 11 detents.
Stop Strength: 5 in. lbs.
Terminal Strength: 1 lb. pull.
Stator & Spacers: Diallyl phthalate.
Rotor: Thermoplastic.
Contacts: Silver alloy, gold plated.
Contact Resistance: 10-20 milliohms.
Insulation Resistance: 10 megohms (min.).
Elec. Rating: 0.25 A @ 110 Vac resistive.
0.50 A @ 30 Vdc resistive.
Life: 10,000 cycles at rated load (min.) room
Temperature: −65° to +85°C
Hardware: Nut, lockwasher, stopwasher.
Finish: Withstands 50 hr. MIL-S-3786 salt spray.

OAK TYPE 500 ½" ROTARY SWITCH

Superior long-life subminiature switches are designed to meet MIL-S-3786/20.

SPECIFICATIONS

Size: ½" (nom), single pole.
Positions: 4, 6, 8, 10 & 12.
Detent: 90°, 60°, 45°, 36° & 30°.
Base: Diallyl phthalate, MIL-M-14.
Rotor: Phenolic, MIL-M-14.
Contacts: Copper alloy w/silver crown, gold plate.
Terminals: Copper alloy, silver crown, gold plate.
Contact Resistance: 20 milliohms (max) MIL.
50 milliohms (max) non-MIL
Stops: Fixed or adjustable.
Shaft & Panel Seal: Neoprene.
Voltage: 600 Vac breakdown (min).
Current Rating: 6.0 A @ 30 Vdc & 110 Vac. Resistive.
Mechanical: Stainless steel & nickel plated steel detent balls.
Write for Bulletin F-1096 for complete details and specifications.



OAK TYPE 850 PROGRAMMABLE ROTARY SWITCH

0.850" square, sealed programmable switch with up to 28 positions, 4 sections and/or 7 outputs plus common per section. Dual-concentric shafts available. Can be wave soldered.

SPECIFICATIONS

Rating: 250 mA @ 28 Vdc resistive.
Contact Resistance: 100 milliohms (max).
Voltage Breakdown: 500 V (min) between common and open contact. 100 V (min) between any contact and housing.
Contacts: Make before break.
Detent Angles: Depends on positions.
Operating Temperature: −55° to +85°C.
Stops: As required.
Coding: Hexidecimal, BCD, Grey and others.
Shafts: Steel, cadmium plated, chromate or zinc plate as required. Outer: 0.250" (nom).
Write for Bulletin F-1093.

OAK SWITCH SYSTEMS, INC. P.O. Box 517, Crystal Lake, IL 60014

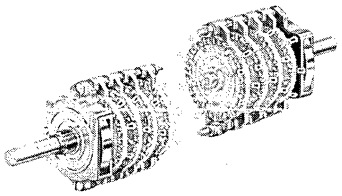
OAK SWITCHES



OAK MULTIDEX ROTARY SWITCH

Oak Multidex Switches replace older models with a completely new design. Multidex switches are smaller than older models yet provide more contacts (up to 32 and 36 positions). The patented Unidex detent system has one or two balls riding on the starwheel for smooth and positive action. The detent housing is a one-piece molding. They meet or exceed the requirements of MIL-S-3786, SR32 (latest issue).

Multidex rotors and stators are molded of diallyl phthalate and meet MIL-M-14 requirements. Contacts are silver plated brass (standard) or silver alloys (other available).

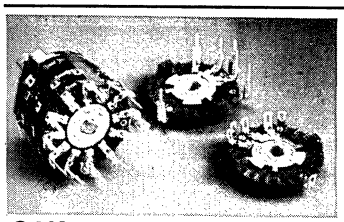
The contacts are self-cleaning, double-wiping types and are coated to resist corrosion.

Terminals are Type "A" clips for easy wire insertion and soldering.

Rated at 0.5 A @ 28 Vdc and 0.25 @ 110 Vac with silver plated contacts. Silver contacts are rated 1.0 @ 28 Vdc and 0.5 A @ 110 Vac. All ratings are for resistive loads.

Temperature ratings are:
MIL: −65° to +85°C.
Commercial: −25° to +85°C.

Both types are made of materials which meet or exceed the requirements of MIL-S-3786 50 hour salt spray test.



OAK TYPE FJ 1.421" DIAMETER ROTARY SWITCH

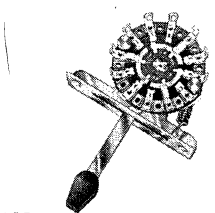
This series of Oak switches is a product expansion of the standard "F" series. They are designed to meet the requirements of MIL-S-3786/SR03.

The FJ series offers terminal clips which are offset on the rear 15° from those on the front. Each section can accommodate up to 22 clips in 30°, 60° or 90° throw. The FJ series utilizes Oak's durable high pressure double wiping contacts which are self-cleaning and corrosion resistant. Terminals are available for both hard soldering and printed circuit board mounting.

Rotation may be either continuous, with a fixed stop or with an adjustable stop.

FJ switches are rated 1.0 A @ 28 Vdc and 5.0 A @ 110 Vac with silver plated brass contacts. Ratings for silver alloy contacts are: 2 A @ 28 Vdc and 1.0 A @ 110 Vac. Contacts can be make before break or break before make or any combination of these.

All FJ switches are made of the highest quality material to meet or exceed all military and commercial requirements.



OAK TYPE 184 LEVER SWITCHES

Oak Type 184 lever switches are designed for reliable operation over thousands of cycles. The proven Type 184 offers a number of options. They are available as either 2, 3, or 4 position styles and with up to 12 terminals per side so that 12 pole 2 position circuits can be used or up to 8 poles with the 3 position style.

Mounting requires a slot and 2 holes to accept the two #4-40 mounting screws. The face of the switch is tapped. The switches require only 1 1/64" of space behind the panel.

Contacts are silver plated brass and are rated at 0.5 A @ 28 Vdc and 0.25 A @ 110 Vac, resistive. The contacts will carry 5 Amps continuously.

The life of this series is rated at 10,000 cycles under standard conditions as a minimum.

The switches are supplied with a standard knob. Other designs are possible.

Write for complete details or contact your nearest Oak distributor or sales office. These are listed in EEM's "Yellow Pages" in this Volume.

LED ILLUMINATED PUSHBUTTON SWITCHES

The A3SA and A3SJ series feature replaceable 4-chip LED(s). This state-of-the-art design provides incandescent brightness, (120° wide viewing angle and viewing distance up to 200 ft.), with LED economy. The A3SJ is available with a 2-way split screen configuration. Incandescent types are also available.

ELECTRICAL FEATURES

Load rating: 10 amperes 125/250 volts ac.
Contacts: fine silver, double-break, break-before-make
Circuits: single-pole and double-pole
Dielectric strength: 2000 volts ac rms.
Life: 25,000 operations at maximum rating

MECHANICAL FEATURES

One-piece molded-nylon body has integral, serrated, spring-lock clips.
Bezel molded integral with body.
Metal bezel available.
Molded-in light-dispersing lens.
Interchangeable lens-caps in wide choice of colors.
Positive mechanical indication of switch-contact position.
100,000 mechanical operations.

TERMINALS

Style A—1/4-inch quick-connect
Style B—3/16-inch quick-connect
Style C—Solder-lug, for #12 wire

STANDARD LAMPS

Integral with switch;
Internally connected per diagrams above.
6, 12, and 28 volt incandescent lamps standard.
125 and 250 volt neon lamps standard.

SPECIAL ORDER LAMPS

125 and 250 volt Blue or Green neon lamps available. Consult factory for price and delivery information.

COLOR DESIGNATIONS

Body and integral bezel
White—C7, Grey—C8, Black—C9,

Transparent lens-cap
Red—1, Clear—2, Amber—3, Green—4, Blue—5

Opaque pushbutton-cap
White—7, Grey—8, Black—9, Blue—10, Green—11, Red—12

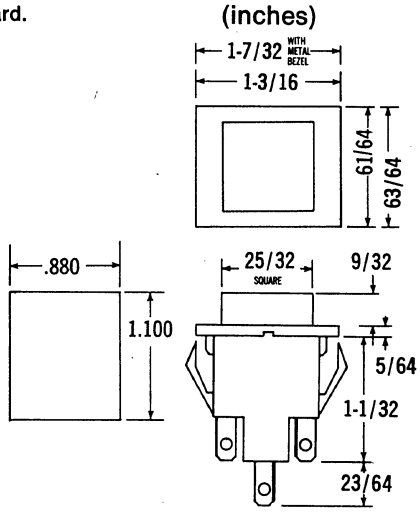
TYPE DG – Lighted Indicators

Type DG Lighted Indicators are identical in size and mounting with Type DL and DP switches and can be grouped easily with them without need for special mounting provision. A choice of different lens-cap heights is available.

TYPE DGS the low-profile indicator extends the same distance from the panel as the Type DL or DP switch in its ON position (1/16 inch).

TYPE DGT the high-profile indicator extends the same distance from the panel as the Type DL or DP switch in its OFF position (9/32 inch).

OUTLINE DIMENSIONS (inches)



METAL BEZELS (optional)

Gold-color—F1, Chrome—F2

MARKINGS

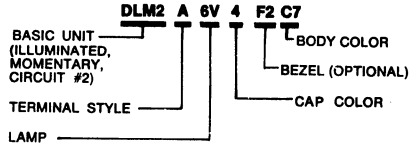
Letters, numbers, and symbols can be applied to lens-caps.

MOUNTING

Snap-in mounting in rectangular hole; fits any panel-thickness 1/32 to 3/16 inch.

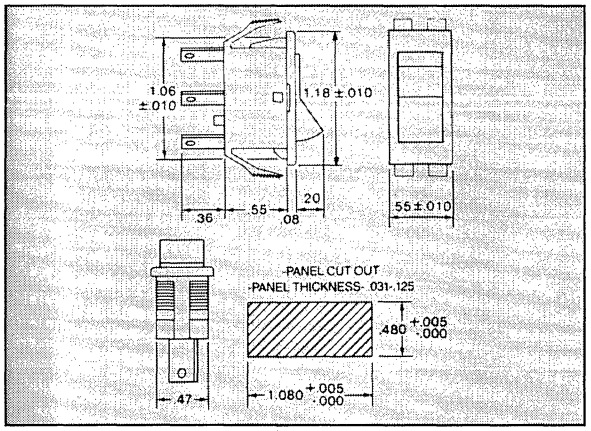
ORDERING EXAMPLE

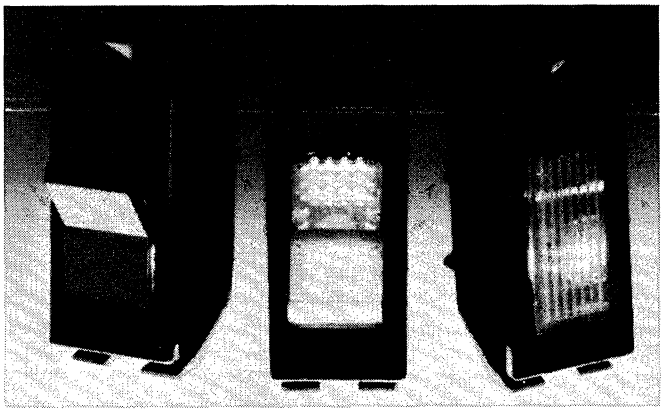
Develop catalog-number of unit by adding to the basic Type Number, shown above, the applicable code-letters or numbers in the sequence shown below.



OSLO CONTROLS INC.
328 Industrial Avenue, Cheshire, Connecticut 06410
Tel.: (203) 272-2794 TWX 710 455 3774

OSLO • ROCKER SWITCHES





Electrical Features
Load Rating: 20 amperes 125/250 volts AC
Contacts: Fine silver for long life dependability
Dielectric strength: 1250 volts (live parts to ground)
Electrical Life: 25,000 operations at maximum rating.
Insulation Resistance: 5 megohms

Terminals
Style A – ¼ inch quick-connect

Lamps
6, 12, 28 volt incandescent, 125, 250 volt Neon

Mechanical Features
One-piece molded-nylon housing, available in choice of colors.
Integral spring-lock clip design speeds assembly.
Optional metal bezels available.
Rocker actuator available in choice of colors.
250,000 mechanical operations.

Markings
Letters, numbers, and symbols can be applied to rocker actuator or to integral nylon bezel.

Mounting
Snap-in mounting in rectangular hole; fits any panel thickness from .031 to .125 inch.

ORDERING PROCEDURE

To the basic catalog number listed, suffix letters and numbers are added in the sequence indicated below:

Example: RSL1A6V1C9F2 This specifies a SPST, lighted, maintained Off-On switch with ¼" quick-connect terminals, transparent red actuator, black housing and optional chrome bezel.

LAMP VOLTAGE	LENS COLORS	HOUSING-COLORS	METAL BEZEL (OPTIONAL)
6V=6 Volt Incandescent	1 = Red 2 = Clear 3 = Amber *4 = Green *5 = Blue 6 = White	C7 = White C8 = Grey (Non-Stock) C9 = Black	F1=Gold Colored F2=Chrome
12V=12 Volt Incandescent			
28V=28 Volt Incandescent			
125V=125 Volt Neon			
250V=250 Volt Neon			

*Blue or green actuators are not recommended for units with neon lamps

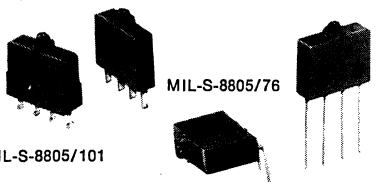
BASIC SWITCHES sub-miniature

DOUBLE-BREAK B3 SERIES



MIL-S-8805/76 THIN **B3-22141**

For your run-of-the-"MIL" projects, OTTO's B3-22141 Series is only .200" thick. Contact resistance less than 25 milliohms, contact pressure higher than normal, minimal contact bounce. Gold flashed contacts, solder terminals in diallyl case. Rated 7A Res.

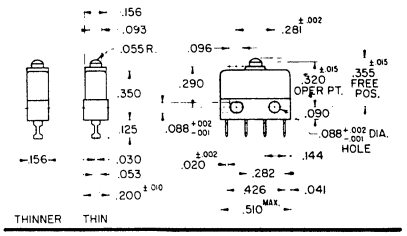
MIL-S-8805/101 THINNER **B3-12141**

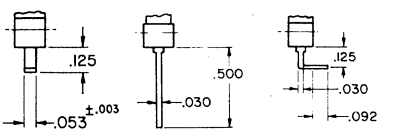
OTTO inspired military spec. is only .156" thin, yet all the rating, life, and reliability of the /76 version. Five B3-12141 Series in the space of four B3-22141. Choice of double-break from X, Y, Z and single break form C. B3-12141 turret terminals, B3-11141 p.c. pins. Also commercial versions.

CHARACTERISTICS

- Contact Resistance: .025Ω max.
- 10 million mechanical cycles.
- Operating Force: 5 $^{+3}_{-2}$ oz.
- Release Force: 1.5 oz. min.
- Overtravel: .006" min.
- Move. Diff.: .018 ±.008"
- Rating: 7A Res., 115 VAC, 28 VDC.

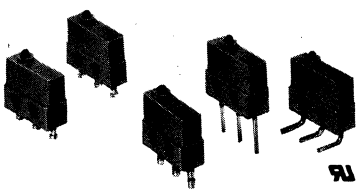
BASIC SWITCH, TURRET TERMINALS





All terminals are .020" thick.

SINGLE-BREAK B2 SERIES



Now available in a choice of .200 and .156 inch wide models. While the OTTO B2 is qualified to MIL-S-8805/4, the same switch can be specified for commercial use at a cost savings. Whether it be military or commercial, low-level "dry circuit" or high ampacity, large or close differentials, you can specify the exact switch to meet your needs. Case is diallyl. Terminals are gold-flashed brass. Contacts are silver or gold.

CHARACTERISTICS

- Contact Resistance: .025Ω max.
- 1 million mechanical cycles.
- Operating Force: 5 oz. max.
- Release Force: 1 oz. min.
- Overtravel: .004" min.
- Move. Diff.: .005" max.
- Rating: 7A res. @ 115 VAC, 28 VDC.

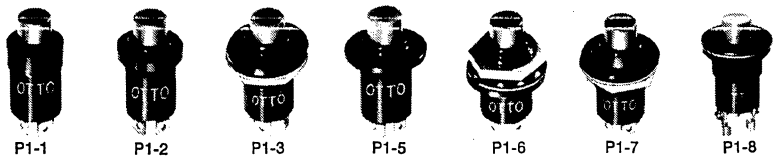
PUSHBUTTONS miniature & moistureproof

OTTO CONTROLS



P1-1 P1-2 P1-3 P1-5 P1-6 P1-7 P1-8

FEATURES

- 250,000 mechanical cycles.
- High Contact Pressure: 120 gr.
- Low Contact Resistance:
- Repeatable trip point within .001".
- Rolling sleeve principle seals button.
- Sealed case and terminals.

TYPE P1 (MIL-S-8805/3)

Pushbutton is sealed by silicone rubber boot operating on a "rolling sleeve" principle to give long life and smooth operation. Case and terminals sealed against environment and solder flux. Load ratings: 10A res., 5A ind., 3A lamp. Contact forms: N.O., N.C., 2-circuit. Red or black button.

P3-3 P3-6 P3-7 P3-8

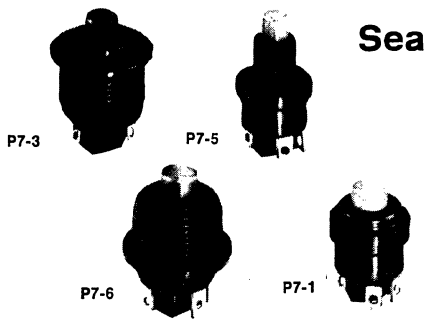
TYPE P3 Commercial Grade

Momentary or push-pull double-break action. Same specs as P1 military series. Choice of solder or screw terminals. Designed for use in panel boards, computers, business machines, instruments. Can be used as limit switch.

NEW

FEATURES:

- Mini size and sealed.
- .025 ohms max. contact resistance.
- Positive tactile feed back.
- 4 mounting styles.
- 6 circuit variations.



P7-3 P7-5 P7-6 P7-1

Sealed Subminiature Pushbutton

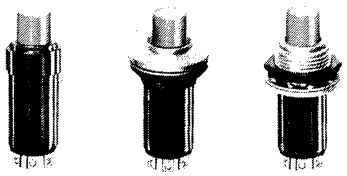
TYPE P7

Double-break action with sealed pushbutton meets environmental and electrical requirements of MIL-S-8805. Switches loads from 10 mA @ 30 mV to 5 amps @ 28 VDC. Choice of black or silver bezel and nine button colors. The P7-1 series features swage bushing, P7-3's have front panel bezel, P7-5's have ¼" bushing while P7-6's have $^{15}/_{32}$" bushing. Seal is either moisture-proof/dust-tite or water-proof. Back-of-panel less than .500". Front panel .437" to .562" diameter.

twostep™ for applications requiring 3 modes of operation

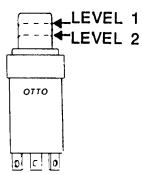
FEATURES

- Unique 2-position design.
- Sequential contact action.
- 12 contact arrangements.
- Make-before-break contact option.
- Moistureproof construction.
- 25,000 mechanical cycles.



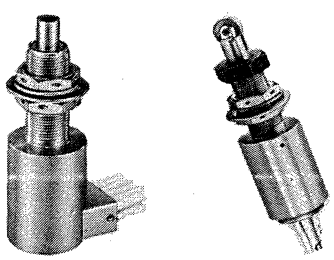
P2-1 P2-3 P2-6

Ideal for "off-high-low," "off-slow-fast," "Stop-fine-course" applications. Each level operates an independent set of SPDT circuits rated to 5A. Twelve contact arrangements are offered to satisfy just about any circuit requirement. Also available as DPDT single detent.



SPECIAL PURPOSE SWITCHES

ENVIRONMENT-FREE

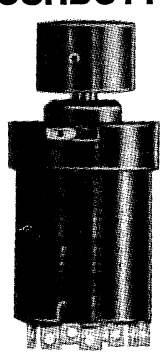


One piece housing, sealed at plunger with ring seals and at base with hermetic header for immersion proof and against corrosive atmospheres. Case grounded for EMI reduction. P6 Series available with roller or in-line plunger.

CHARACTERISTICS

- Rating: 7A res. at 28 VDC.
- Actuating Force: 9 lbs. Typ.
- Reset Force: 5 lbs. min.

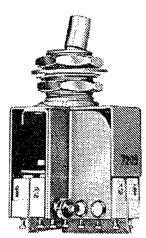
TOGGLE/ PUSHBUTTON



T2-0001

Combo toggle and pushbutton. It's a 2-position toggle and a pushbutton switch all in one. 30° toggle throw, .135" total pushbutton travel with 4.5 lbs. operating force. Rated 10A res. and ind.

TOGGLE



T1-0001

Four position, 6-pole toggle featuring MIL-S-8805/4 basic switches. Positions #1 and #3 are 2PDT maintained action each, position #4 is 2PDT momentary, position #2 is center "off." Rated 7A. res. each pole.

T1-0004

Same except 3-position, 4-pole toggle. Position #1 is 2PDT momentary, position #2 is center "off," position #3 is 2PDT maintained action.

Micro-Miniature Toggle Switches

FSC 60046 • PC • Ultra-Low Current • Low Cost

Developed especially for use with ultra-low currents. Gold-plated, plus extra heavy gold-plating on contact points. Unique contact design assures stronger and more stable contact resistance.

SPECIFICATIONS

Contacts and Terminals: Gold-plated

Rating: 5 VDC 100 mA
25 VDC 25 mA

Contact resistance: Less than 20m ohms (100 mV 1 mA)

Insulation resistance: More than 1000M ohms (500 VDC)

Current capacity: 0.1 micron A~0.1A

Dielectric strength: 100 VRMS at sea level

Life cycle: 50,000 contacts (standard type)

Mechanical life: 2 Pos.: 100,000 operations
3 Pos.: 50,000 operations

Electrical life: 2 Pos.: 50,000
3 Pos.: 25,000

Low Cost Commercial Versions: 2 Pos.: 40,000
3 Pos.: 20,000

FEATURES

- ▲ Terminals utilize international printed circuit board standard spacing to match most PC boards.
- ▲ Pins and contacts are nickel, gold-plated. (3 microns of nickel-plating with a minimum of 1.3 microns of gold).
- ▲ Case is UL-standard approved 0-94V Valox. Resists the effects of chemicals, high impact shock and high temperatures.
- ▲ Cleaning is simple even after mounting because of the design of the standoffs.
- ▲ Single and double pole types have four standoffs to allow maximum mounting stability.
- ▲ Available:
  - Plain bushing, no threads
  - ¼ threaded bushings with hexagon nuts
  - Toothwasher (standard)
  - Locking washer
  - 10.4mm long lever
  - Low-Cost Commercial Version—0.5 Microns Aμ

Rotary Switches
• Molded
• RF Power
• Subminiature

Radio Switch has a complete line of rotary switches to meet a wide variety of applications requiring exceptional reliability and quality.

With over 40 years experience in design and manufacturing, Radio Switch has the capability of providing a broad selection of standard switches as well as supplying switches to customers stringent specifications. Our staff will work closely with your engineering personnel to develop, test, and implement the rotary switch that is custom-designed for your application.

Our RF and power switches range from 2,000 volts peak flashover at 20 amperes to 24,000 volts peak flashover at 100 amperes. In the sub-miniature size, coin silver current carrying components can carry 5 amperes with initial contact resistance of only .010 ohms max. where low current switching applications are critical. Our molded type switches have the capability of switching 20 positions per circuit and are ideal for test equipment and industrial control systems.

For high performance, quality, and fast delivery, specify Radio Switch.

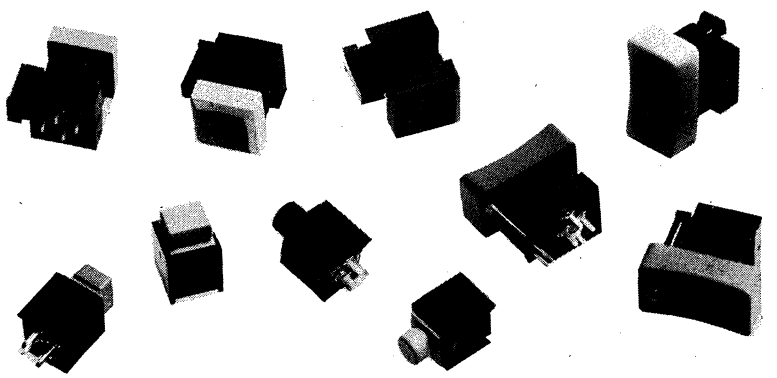
ROTARY SWITCHES FOR INDUSTRY

SEACOR

SEACOR INC.

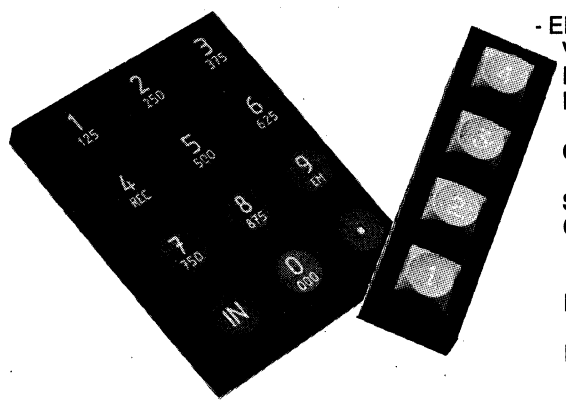
KEY SWITCHES

- Electromechanical control for a wide variety of applications.
- Body is made of Noryl SEI/ Buttons are of ABS plastic in various colors.
- Single pole
- Special <<click>> effect gives clear evidence that the contact has been made.
- Available with luminous led.
- Contacts are brass - silver plated.
- Springs are bronze - silver plated
- Electrical Specifications:
  Insulation Resistance: $>2.5 \times 10^4 M\Omega$
  Contact Resistance: $<25\ M\Omega$
  Operating Temperature: $-20°C$ to $+70°C$
  Bounce Time: <2 MS
  Operating Force: <4.3 oz. (1.2 N)
  Operating Travel: $.028 \pm .008$ ($.7 \pm .2$)
  Operating Life: $>5 \times 10^5$ Cycles



SEALED KEYPADS

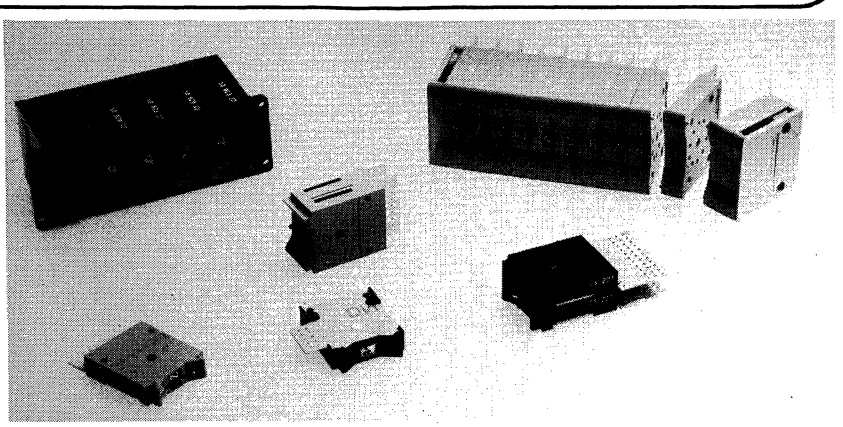
- Designed for applications in climatic and environmental conditions.
- 4, 12, 16, 20, Key configurations available.
- Available in luminous type.
- Protection and sealing are obtained by elastic sheet.
- Keycaps are mounted directly onto outer elastic sheet.
- Standard mounting uses metal plate and 3mm threaded studs.
- Available in flush or surface mounted
- Keycaps
  - ABS molded plastic in many different colors
  - Legends are hot stamped white or black
  - Metal caps also available upon request
- Gold crosspoint contacts
- Mechanical Specifications:
  Pretravel: .0394 to .0591 (1 to 1.5mm)
  Contact Travel: .02 (.5mm)
  Operating Force: 150-300 grams
- Electrical Specifications:
  Voltage: 50V AC or DC
  Max. Voltage: 100V AC
  Dielectric Strength: 1.5 KV minimum
  Current: 50 mA maximum on resistive load
  Switching: 2.5 VA maximum
  Contact Resistance: 60-150 milliohms at the connector terminals
  Insulation Resistance: 100 megohms min. at 200V
  Bouncing: <5 ms



MINIATURE THUMBWHEEL SWITCHES

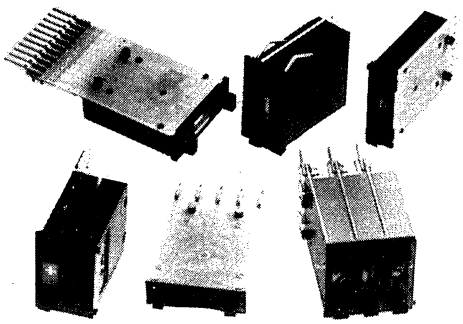
SEACOR SERIES CS 200, CS 600, CS 700, and CS 800

- Available in popular sizes to meet your present and potential requirements.
- Front and rear mounting options.
- Rugged construction/ minimum operational life is 10^6 operations.
- Illumination of thumbwell digits available.
- ABS plastic thumbwheel and case.
- Competitively priced and prompt delivery.
- Common Specifications:
  Switching Capacity: 1 to 50 mA
  Current Carrying Capacity: 50V
  Nom. Switched Operating Voltage: 120V
  Contact Resistance: <100 milliohms
  Insulation Resistance: $>10^5$M
  Dielectric Strength: >750 Volts



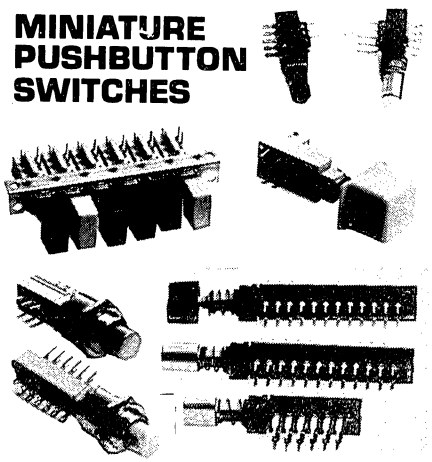
MINIATURE SWITCHES and KEYPADS

MINIATURE PUSHWHEEL SWITCHES

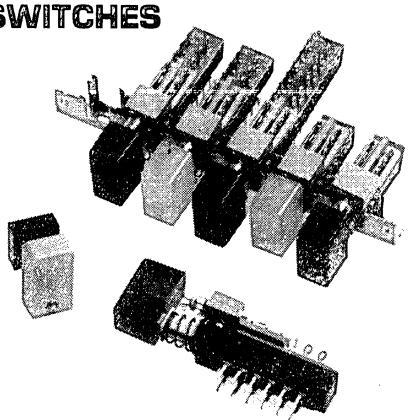


Seacor Series DP100 and DP200
- These switches allow undisturbed view of digits while operating.
- Snap together assembly-no hardware required.
- Economically priced for applications requiring minimum size.
- ABS plastic pushwheel and case.
- Rotation stops available on request.
- Illumination of pushwheel digits is available.
- Miniature and subminiature sizes available
- Common Specifications:
  - Switching Capacity: 1 to 50 mA
  - Current Carrying Capacity: 500 mA
  - Switched Operating Voltage: 50V
  - Nom. Switched Operating Voltage: 120V
  - Contact Resistance: 80 m or 100 m (depending on series selected)
  - Insulation Resistance: 10^5 M or 10^3 M (depending on series selected)

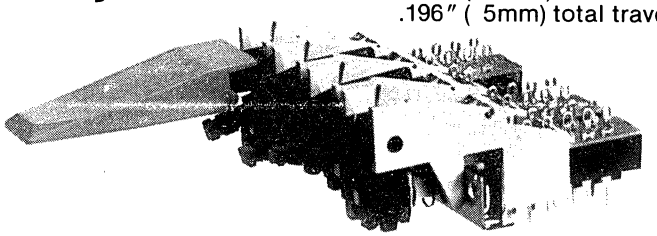
MINIATURE PUSHBUTTON SWITCHES



MINIATURE ILLUMINATED SWITCHES



MINIATURE PRESS (PIANOKEY) SWITCHES



- Versatile system of modules allows virtually any combination of switches required.
- Modules are dust-tight closed.
- Hardened silver plated contacts.
- Mounting brackets are made of tinned steel
- Up to 20 stations per assembly
- Up to 10 PDT circuits per key
- Functions (Mode)
  - Self Releasing
    - push to latch, push to release
    - push-pull, alternate action
  - Mutual Latching
    - interlatch, mutual releasing
    - push to latch, push different key in chain to release
  - Momentary
    - spring loaded non-latching
- Electrical Specifications:
  - Electrical Rating: 0.4A 125 VAC 50 Watts
  - Contact Resistance: < 5 Milliohms
  - Breakdown Voltage: > 2000 Volts RMS
  - Insulation Resistance: > 25,000 Megohms
- Machanical Specifications:
  - Life Test: Over 50,000 Cycles
  - Station Spacing (Pitch):
    - .394″ (10mm)
    - .492″ (12.5mm)
    - .590″ (15mm)
    - .689″ (17.5mm)
    - .787″ (20mm)
  - Stoke: .137″ (3.5mm) make and locking
    - .059″ (1.5mm) over travel
    - .196″ (5mm) total travel

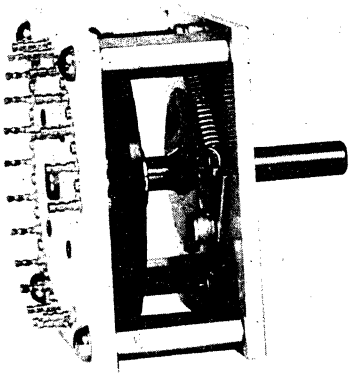
Shallco ROTARY SWITCHES SERIES C, D, AND E



SPECIFICATIONS

GENERAL:

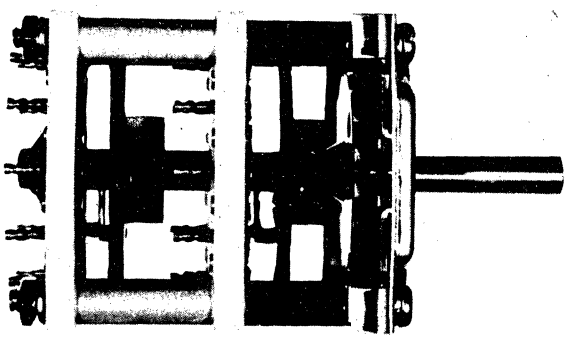
Meets or surpasses requirements of MIL-S-3786

ELECTRICAL:

Current carrying capacity—10 amps.
Current switching capacity—up to 2 amps.
Contact resistance—Initial—.005 ohms max.
Contact resistance—After Life—.010 ohms max.
Insulation resistance—50,000 megohms
Dielectric withstanding voltage—1500V rms
Dielectric withstanding voltage after life—1000V rms

MECHANICAL:

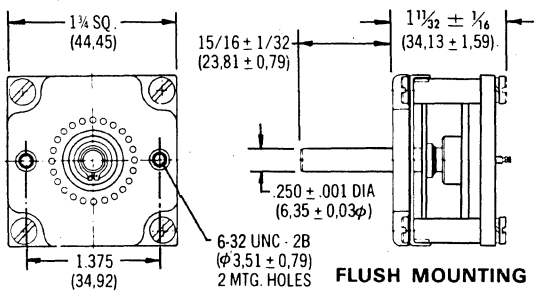
Rotational life—50,000 cycles* min.@.250 amps.@85° C
Stop torque—50 In. Lbs.
Type construction—Open frame
Stops—Factory set to desired position.
Optional features—⅜-32 UNEF-2A bushing mount with anti-rotation pin. Shaft and front panel "O" ring seals. Spring return feature.
Concentric shafts available
Progressive shorting available
*One cycle = one full cw plus one full ccw rotation.



FEATURES OF SHALLCO 1¾, 2¼, 2¾ SQUARE SERIES C, D, E SINGLE DECK SWITCH MULTI DECKS AVAILABLE

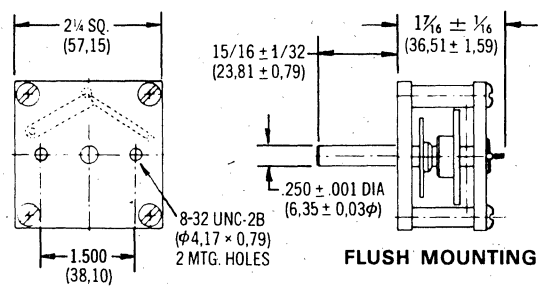
- Meets or surpasses requirements of MIL-S-3786
- Available in one pole 2-48 position through four pole 2-15 position. See ordering information
- High current carrying capacity
- Low contact resistance

SERIES C



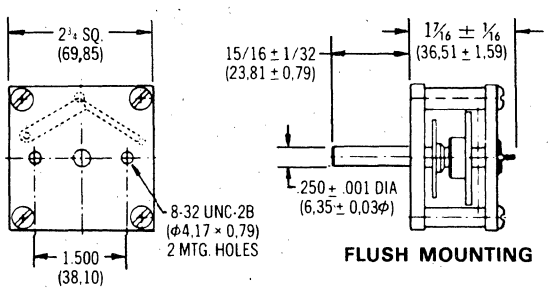
FOR ADDITIONAL DECKS ADD. 29/32 (23,02) PER DECK

SERIES D



FOR ADDITIONAL DECKS ADD 1 1/16 (26,99) PER DECK

SERIES E



FOR ADDITIONAL DECKS ADD 1 1/16 (26,99) PER DECK.

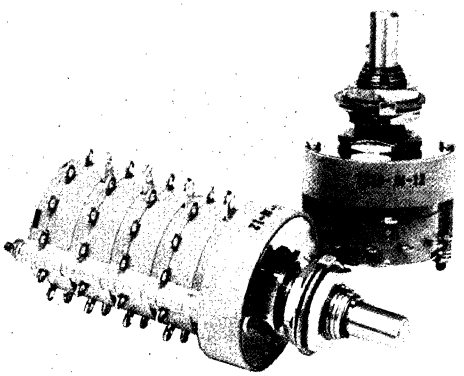
ROTARY SELECTOR SWITCHES



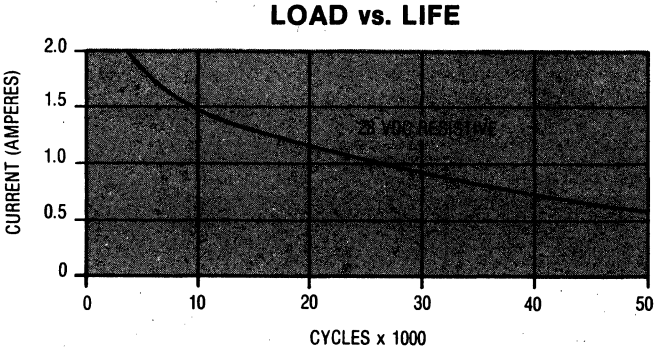
SPECIFICATIONS

GENERAL:
Designed to meet the requirements of MIL-S-3786/SR04

ELECTRICAL:
Current carrying capacity - 10 amperes
Current switching capacity - 1 ampere (28 VDC, Resistive)
Contact resistance - Initial - 5 milliohms maximum
Contact resistance - After Life - 20 milliohms maximum
Insulation resistance - 50,000 megohms
Voltage breakdown - 1000 VAC
Voltage breakdown - After Life - 500 VAC minimum

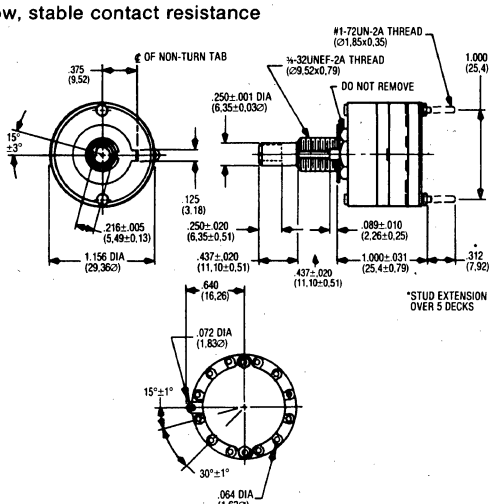
MECHANICAL:
Rotational life - 50,000 cycles
Stop torque - 15 pound-inches minimum
Construction - Enclosed
Stops - Factory set
Torque - 8 to 120 ounce-inches (dependent on decks, poles/deck)
Shaft flat - Opposite moving contact, see diagrams

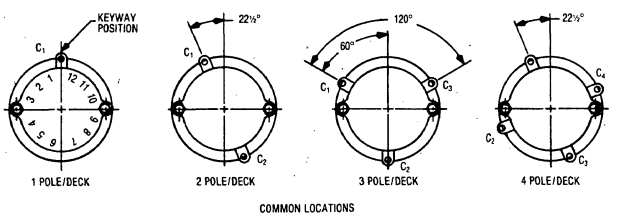
LOAD vs. LIFE



FEATURES OF SHALLCO ONE INCH SERIES J SINGLE OR MULTIDECK SWITCH

- Designed to meet requirements of MIL-S-3786
- Closed construction
- Smooth, positive detent
- Low, stable contact resistance





BACK-PANEL DEPTH

DECKS	INCHES	MM	DECKS	INCHES	MM
1	1.000	25.4	7	2.992	76
2	1.332	33.8	8	3.324	84.4
3	1.664	42.3	9	3.656	92.9
4	1.996	50.7	10	3.988	101.3
5	2.328	60.5	11	4.320	109.7
6	2.660	67.6	12	4.652	118.2

APPROXIMATE WEIGHT
Switch, 1 Deck/W Hardware ..... 50 grams
Additional Deck ..... 8 grams

MATERIALS AND FINISHES
Insulation - Diallyl Phthalate
Rotor/Stator Contacts - Silver Alloy
Shaft, Stampings, Hardware - Stainless Steel
Detent Spring - Tinned Music Wire
Terminals - Brass under Silver or Gold
Mounting Bushing - Brass, Zinc Plated - Chromate

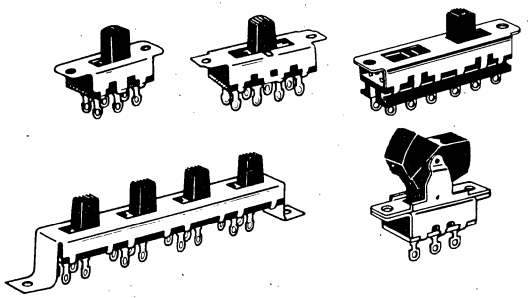
SLIDE SWITCHES

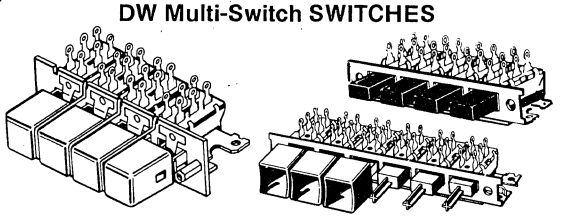


DW SLIDE SWITCHES

Instrument quality Switchcraft slide switches have low cost, precision "double-wipe" contacts with "U"-shaped bifurcated contacts rated at 0.5 A DC, 3 A AC, 125 V, non-inductive. Solder lugs have 5/64" dia. center holes and wrap-around notch. Many knob styles: crowned, rocker, flush. U.L. & C.S.A. listed types. Up to 4 poles of switching with locking or momentary action.

Series 46000E — General purpose slide switches
Series 47000E — Tandem switches
Series 51000E — Rocker switches
Series 58000 — Slide switches (6 amp)

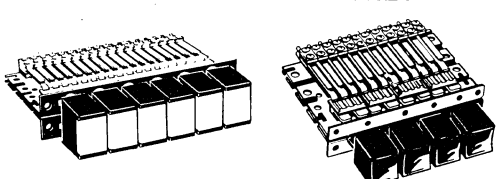
DW Multi-Switch SWITCHES



The DW (double-wipe) Multi-Switch switch is available up to 18 stations in a single row; or on special order, ganged assemblies with interaction between rows. Max. switching per station is 4-C (4PDT). Each station utilizes specially designed switching modules with U-shaped, high reliable bifurcated contactors rated at 3 amps, A.C.; 0.5 amp. D.C., 125 V, non-inductive load. DW Multi-Switch switches are available in 5 series: 65000, 66000, 67000, 70000, and 71000. All provide four standard functions: **Interlock**—actuating a pushbutton automatically restores to normal the pushbutton previously actuated. **Lock-Out**—prevents operation of more than one pushbutton at a time. This feature is included on all interlock switches. **Non-Lock**—each pushbutton has momentary action. **All-Lock**—all pushbuttons, except release, lock when depressed. All pushbuttons restored to normal by actuating (momentary) release pushbutton. **Push-Lock/Push-Release**—pushbuttons lock when depressed and release when again depressed. **All Series**—pushbuttons on ¾" centers. DW Multi-Switch switches are available in single row assemblies with interlock and all-lock functions from one to twelve stations; with non-lock and push-lock/push-release functions up to eighteen stations.

Series 65000—Non-illuminated, integral pushbutton.
Series 66000—Non-illuminated version of Series 67000.
Series 67000—Illuminated pushbuttons.
Series 70000, 71000—Non-illuminated, cross-rib plungers, accept up to 12 different styles of pushbuttons.

littel Multi-Switch SWITCHES



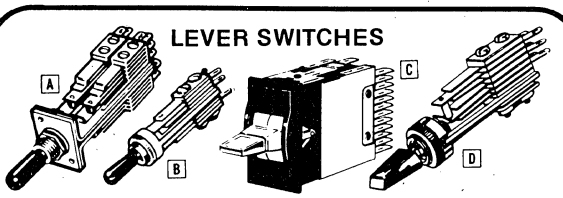
Series 35000—Non-illuminated.
Compact, rugged multiple-station switches feature up to 6PDT per station in .6 square inch space. Excellent selection of contacts for low or high current switching. Plungers accept nine different Switchcraft pushbuttons. Mechanical functions are: interlock, all-lock, non-lock and push-lock/push-release. One to 12 stations; many legends are possible.

Series 36000—Non-illuminated companion series to Series 37000. All other basic functions and features are same as Series 35000.

Series 37000—Single lamp illumination at each station. All other basic functions and features are same as Series 35000.

Series 38000—Twin lamp illumination using low power, low heat lamps. All other basic functions and features same as Series 35000.

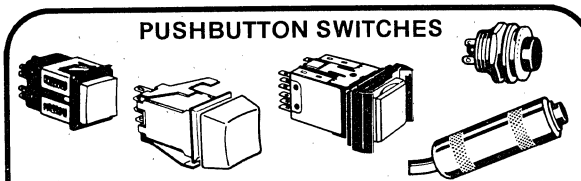
LEVER SWITCHES



Large variety of illuminated and non-illuminated switches are rugged and compact and are ideal for all control panel applications. Non-illuminated types have up to 4PDT in locking or momentary actions. Ratings: up to 3 A, 300 W max., AC non-inductive load. Illuminated switches have up to 8 A, 125 V AC contacts with up to 8PDT switching. Lever lights a different color for each position. Terminals can be solder lug or quick-connect.

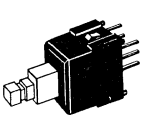
A **Series 16000**—Telephone-type lever switches
B **Series 3000, 13000**—Locking and non-locking multi-position switches
C **Series 84000**—Illuminated lever switches
D **Series 28000**—Compact, low-cost lever type switch

PUSHBUTTON SWITCHES



Design versatility creates switches for a spectrum of equipment and system applications. Features include illuminated or non-illuminated, tactile pushbuttons, legends (standard and custom), ultra-compact types, dry circuit to high current, multiple pole contacts, momentary or locking actions, colored pushbuttons, single-hole panel/chassis mount or pendant (cord) mount, solder or PC terminals. Lighted switches can be specified with incandescent or LED lighting.

IBS SWITCHES



Series 98000 IBS miniaturized pushbutton switches have special versatility, low cost, low contact resistance (tested to 30 milliohms). IBS Multi-Switch key switches offer 10, 15, 20 mm centers; 1-12 stations; interlock, non-lock, push-lock/push-release. IBS switches can be used anywhere — business equipment, computers, test equipment, medical electronics, telecommunications, digital transmission equipment, and other modern applications. Standard mounting dimensions, simple panel design; close stacking; fast assembly; automatic wave soldering. Precious metal contacts — .125 A resistive @ 125 V AC; up to 2-C or 2-D circuitry.

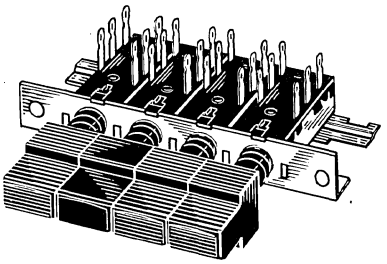
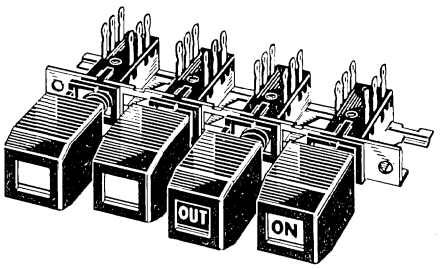
Tini DW Multi-Switch® SWITCHES

NEW FROM SWITCHCRAFT . . .





The first American made, subminiature, non-illuminated, multiple-station switches on 10 mm and 15 mm centers. Produced with completely proven design concept, Tini DW Multi-Switch switches have long life and extremely attractive mechanical and electrical characteristics . . . and Tini DW Multi-Switch switches are your only domestically produced switch of this type.

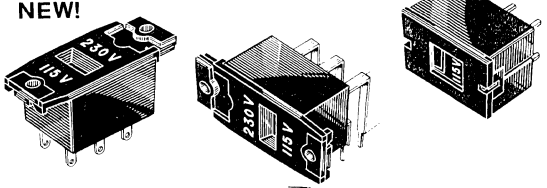
Dependable, low cost Series 90000 (10 mm centers) and 92000 (15 mm centers) switches offer a full range of versatile mechanical functions and the exclusive "Snap-Slide" switching technique. Applications are analog and digital computers, analyzers, transmitters and receivers, intercoms, numerical control, ground support systems, scientific instruments, home entertainment systems and appliances, and a multitude of other critical control panel switching tasks where size, low cost and rugged reliability are prime engineering requisites.

And Tini DW Multi-Switch switches offer the bonus of up to 18 stations in a single row, each having up to 8-C (8PDT) switching. Mechanical functions include interlock, non-lock, all-lock and push-lock/push-release.

"Flip-Flop" Pushbuttons, Series TDW-F have unique internal "flip-flop" mechanism which permits button face to change colors without electrical energy, without lamps and without wiring. When pushbutton is operated, highly reflective panels inside housing change position and use ambient light to give a bright illuminated effect. ("Flip-Flop" pushbuttons designed for use on Series 92000 Tini DW Multi-Switch").

EUROPEAN LINE VOLTAGE SELECTOR SWITCHES

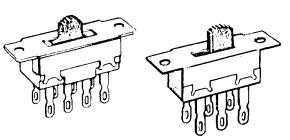
NEW!



Durable slide switches provide quick and easy programming/selection of 115 V or 230 V primary power in electrical/electronic equipment for international marketplace. UL, CSA and VDE (Verband Deutscher Elektrotechniker) approved. Mounting are flange or PC (straight or right angle), DPDT, locking. Ratings: UL & CSA: 2 A, 250 V AC & 4 A, 125 V AC. VDE: 2 A, 250 V AC. Switches also designed to comply with CEE and IEC requirements. Legends: 115 V-230 V.

"Tini-Slide" SWITCHES

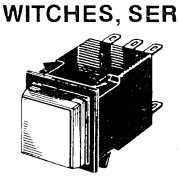
ANOTHER Switchcraft INNOVATION . . .



Miniature "**Tini-Slide**" switches are precision locking switches with unique lift/wipe/slide action and silver contacts. Ratings: 0.5 A, 125 V AC or DC, non-inductive. 2- and 3-position types. U.L. listed. Solder lugs or PC terminals. Crowned knobs.

"Box Switch" SWITCHES, SERIES BXL

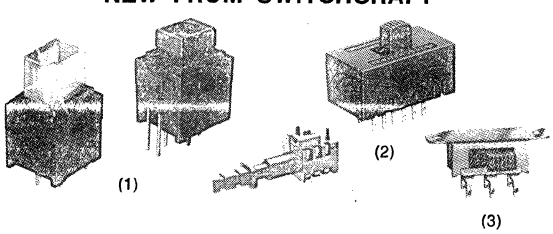
NEW, LOW COST!



NEW miniature momentary or locking pushbutton switches offer lighted and unlighted options in minimum panel space. Molded black plastic housing protects against dust and dirt; prevents bending/disfiguring contacts caused by excessive handling. Attractive bezel frames pushbutton and acts as built-in escutcheon. Can be mounted in rows or matrices; completely compatible in front-of-panel appearance with Switchcraft Series BXR "Box Switch" switches.

Integral slide contacts are silver plated copper alloy, rated at 0.25 A, resistive, 125 V AC. Choice of terminals are solder lug/quick connect (AMP Faston series 110) or P.C. terminals. Switches accept standard incandescent T-1 ¾ wedge base lamps. Relamp from front of panel. Pushbuttons must be ordered separately and customer-installed.

NEW FROM SWITCHCRAFT



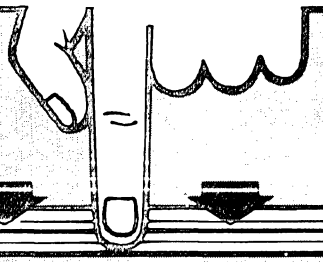
1. P70000 Series lighted/unlighted miniature key switches offer variety of features; short stroke switching action; long life; audible "click" positive tactile feel for operation awareness.
2. Space-saving Series C63000 miniature slide switches offer 4-pole/2-position switching for close PC mounting on .100 x .200-inch centers.
3. Series 62000 miniaturized right angle slide switches; 2C (DPDT) locking action; knob actuator on the side, offer low profile, PC board space savings.

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

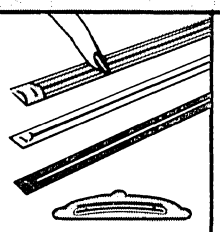
Tapeswitch

PRESS-AT-ANY-POINT

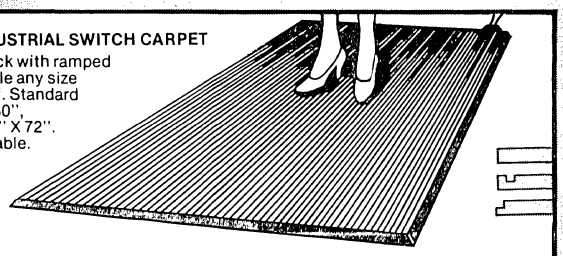


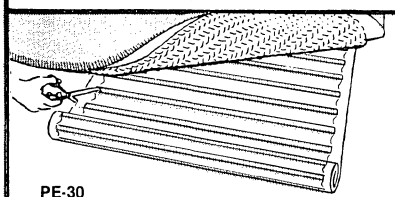
SENSING SWITCHES

RIBBON SWITCHES
Factory sealed units with 18 inch connecting leads at one end. Sensitivity: 8, 12, or 40 ounce finger pressure. Standard lengths: 1, 2, 5, 8, 10, 12, 15, 18, 20 ft. Double leads on order. See text at bottom.
Now available with self adhesive.

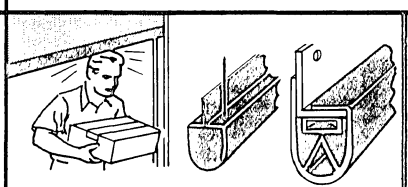


CKP HEAVY DUTY INDUSTRIAL SWITCH CARPET
Both styles 1/2 inch thick with ramped edging. Sealed. Available any size or shape. Weatherproof. Standard sizes: 24" X 36", 30" X 30", 30" X 48", 36" X 48", 36" X 72". Optional features available.
Ideal for Robots.



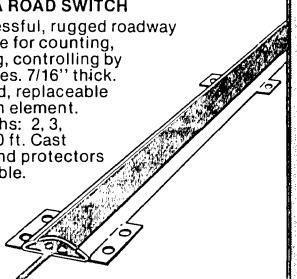


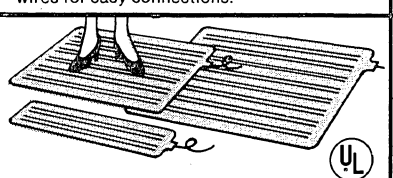
PE-30
UNDER CARPET SWITCHING RUNNER
30 inches wide X 3/32 inches thick 5ft., 25ft., 50ft. roll. Can be cut to any length from roll. For indoor use under carpeting. Excellent under plywood or tile. Parallel Tapeswitches between clear sheeting. Tinned wires for easy connections.



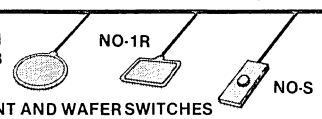
TAPESWITCH
CONTROFLEX® SAFETY EDGES
Serve as cushioned sensing switches for the leading edges of doors, gate arms, machinery, etc., to stop or reverse the action. Numerous styles available. Write or call for details.

RBMA ROAD SWITCH
Successful, rugged roadway treadle for counting, timing, controlling by vehicles. 7/16" thick. Sealed, replaceable switch element. Lengths: 2, 3, 5, 8, 10 ft. Cast iron end protectors available.

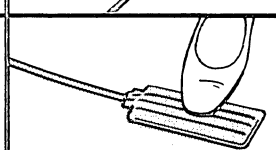




CVP SWITCHING MATS
CVP style mats are durable flexible area switches for use exposed or under rubber mat or carpeting. UL listed for use in alarms. 3/32" thick. Available 6" X 23", 17" X 23", 23" X 35".

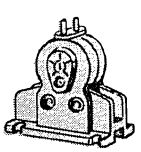


POINT AND WAFER SWITCHES
NO-1 and **NO-1R**—Rugged compact wafer switch. Normally Open. For under valuable objects or general purpose detection. 2 lb. nom. sensitivity.
NC-3—Normally Closed detector switch. Opens when weight is lifted off. 2 lb. nom. sensitivity.
NO-S—1 ounce sensitivity wiping action. Super sensitive.

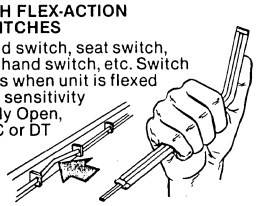


111 CONTROFLEX® FOOTSWITCH
Rugged, low-profile sealed vinyl footswitch. Rated at 100 watts. Employs Controflex® in flat pad. Non tiring. Stand or jump on it. 2″ x 5″ x ⅜″ 6 ft. lead wire. SPST N.O.

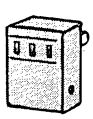
SENSITIVE AIRWAVE SWITCH MODEL AW
High quality diaphragm switch, adjustable sensitivity. Operates from tubing squeeze, air motion, light vacuum, breath pressure, etc. Silver contacts. Many adjustment features.



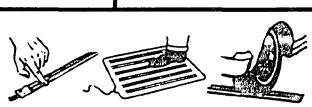
TAPESWITCH FLEX-ACTION RIBBON SWITCHES
Ideal for wand switch, seat switch, limit switch, hand switch, etc. Switch action occurs when unit is flexed 10°. Nominal sensitivity 4 oz. Normally Open, standard. NC or DT available.



TAPESWITCH RELAY R-1
FOR AC CONTROL WITH ANY TAPESWITCH. This plug-in unit has AC outlet sockets giving Normally ON or Normally OFF 117 Volts AC at 5 Amperes. Built-in low voltage transformer. Simultaneous action.



Tapeswitch products are proven in all industries. Patented construction withstands tons of force yet can close on light finger pressure. TAPESWITCHES are unexcelled for—*safety...automation...antiburglar systems...counting...timing...door control...light switching...machine control...material handling...seat switching...computer and console switching*...plus many other applications. TAPESWITCH RIBBON SWITCHES can be bought in the size and length needed.



HAND . . . . . FOOT . . . . . VEHICLE

Features: Inherently sealed. Self bottoming. **Press-at-any-point operation** eliminates linkages. All styles except flex-action switches can be coiled without shorting. Millions of impacts at one point.
Rating: All Tapeswitches are rated at more than 1 ampere, 117 VAC. However, for floow switching low voltage is recommended.
TAPESWITCHES are designed in accord with the best principles of switch and cable design, with jacketing and insulation meeting the requirements of MIL-C-9154 and MIL-I-631C respectively.
Unique Fail-Safe circuitry is feasible with all Tapeswitches.

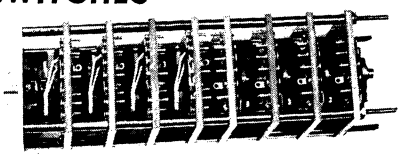
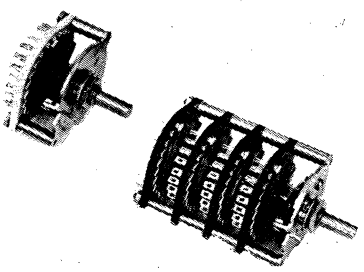
SQUARE ROTARY SWITCHES



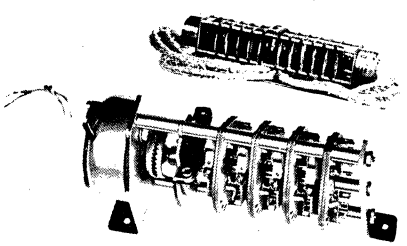
- 13 models available
- 1 5/16" sq. to 8" sq. x 15 decks (max.)
- 1 to 12 poles
- Up to 150 positions/pole
- Fixed stops or continuous rotation
- 3 amps at 120 VAC to 15 amps at 120 VAC
- Precious metal contacts
- Adjustable stops available

TYPE 2 ROTARY SWITCH



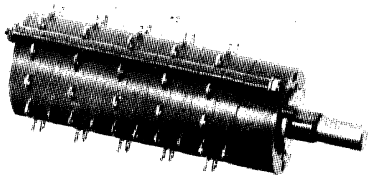
- Two insulation materials available
- 1 to 4 poles/deck
- Up to 24 positions/pole
- Adjustable stops
- 5 amps, 120 VAC max.
- Precious metal contacts

REMOTELY CONTROLLED ROTARY SWITCHES

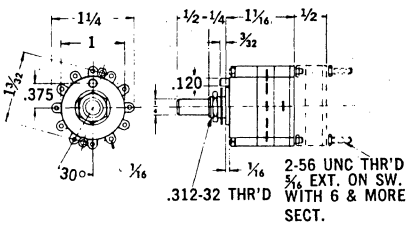


- All Tech Lab Switches can be supplied as stepping switches or continuous motor driven
- Solenoid drives
- Motor and Geneva drives
- Enercon AC incremental motor drive
- Available with interrupters or homing decks
- Completely pre-wired ready to install
- Hermetic sealing available
- May be remotely controlled by: Master-slave arrangement; Computer or other; External pulse
- Either AC or DC operation

TYPE 3 ROTARY SWITCH

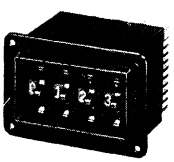


DIMENSIONS



- Enclosed molding in diallyl phthalate
- Molded in terminals
- 1 or 2 poles/deck
- Up to 12 positions/pole
- 1¼" OD up to 8 decks (max.)
- Adjustable stops
- 12 amps, 28 VDC
- Precious metal contacts
- Mixed decks of shorting and non-shorting
- Mixed shorting and non-shorting contacts on each deck
- Choice of either 3/8-32 or 5/16-32 mounting bushing
- External adjustable stops
- Offset wipers

THUMBWHEEL SWITCHES

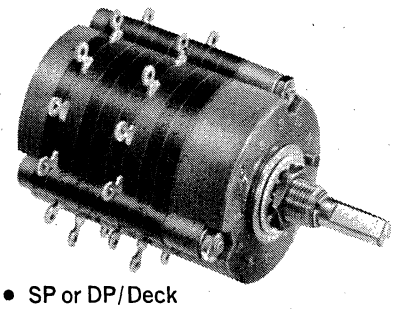


- Compact modular construction
- Positive detent, 8, 10, 11, 12 pos.
- Simple installation
- Two models available
- Wide range of codes
- Various terminations
- Illuminated
- Adjustable stops
- Decade transfer drive
- KV voltage dividers
- Precision Res. Dec.
- Capacitance decades
- Various colors

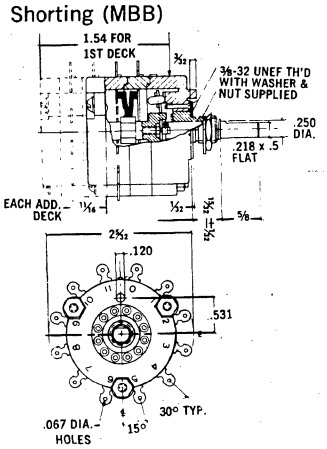
SPECIALS

Tech Labs can customize your Switch and Attenuator requirements, completely pre-wire your switches ready for installation. We can also undertake prototype design and manufacturing. Contact our factory for quotations.

ROTARY INSTRUMENT SWITCH SERIES 2000



- SP or DP/Deck
- Extremely low contact resistance — <1 milliohm
- Extremely high insulation resistance — more than one million megohms
- Totally enclosed -- dust tight
- Long life — > one million
- 12 position/1-6 pole/deck max.
- Silver alloy contacts
- External adjustable stops
- Shorting (MBB)



SPECIAL DESIGN VARIATIONS

SIX AND ELEVEN POSITION DETENTS
The six position detent is 60° throw, skipping every other contact. The eleven position detent is 30° throw with the eleventh position omitted so that the detent goes 60° from position ten to position zero.

OFFSET WIPERS
30° and 180° offset wipers are available for use in special circuits.

CAPACITANCE
Less than 1 micromicrofarad between contacts or to ground.

CURRENT CAPACITY
5 amps maximum continuous duty.

THERMAL EMF
Extremely low. Silver contacts & brushes.

VOLTAGE BREAKDOWN
Withstands 1500V RMS between contacts and to ground.

LOSSES
Low electrical losses at frequencies up to several megacycles.

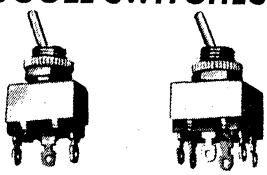
TOGGLE SWITCHES



Tech Lab switches are available in many **combinations** of bushings, terminals, handles, housings and electrical styles.

OPERATING CHARACTERISTICS

- **Insulation Resistance**
  Greater than 100,000 megohms at 100 VDC and 70°F
- **Dielectric Strength**
  At sea level 1,000V rms at 60 cps for 1 min.
- **Contact Resistance**
  Initial — less than .010 ohms
- **Contact Rating**

DC Load Inductive	AC Load Inductive
28V	**125V**
5 amp	5 amp

- **Temperature Range**
  −55°C to 85°C
- **Vibration Endurance**
  10 to 2,000 cps per MIL-R-25018
- **Shock Endurance**
  75G
- **Contact Chatter**
  10 microseconds or less MIL-R-5757
- **Corrosion Resistance**
  of complete assembly 50 hrs per QQ-M-151
- **Mechanical Endurance**
  100,000 cycles switching 10 amp. 50 VDC resistive load

MATERIAL SPEC

- **Base**
  Rogers RX-600
  Phenolic Glass Fiber
- **Housing and Mounting Bushing**
- **Brass**
- **Contacts**
  Fine silver-gold plated

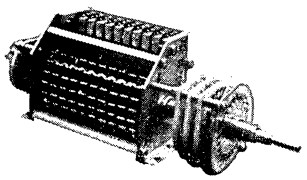
DIMENSIONS

- SP ¼" x ½" x 5/16"
- DP ½" x ½" x 5/16"
- ¼-40 TH'D Bushing
  ¼ or ⅜ long with Keyway
- Various type actuator levers
- Solder or PC Terminals

APPLICABLE MIL SPEC

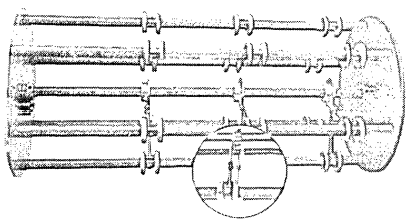
MIL-S-3950 MS-75028 MS-75029

PROGRAMMING SWITCH



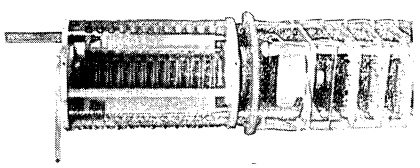
- Adjustable programming for process control, testing, sequencing, scanning, etc.
- SP or DP switches/section
- Up to 25 amp. contact rating
- Up to 48 pos./section/switch
- Remote control
- Computer interface opto-isolated

HIGH VOLTAGE SWITCHES



- Up to 100 KV (low power)
- Corona shields

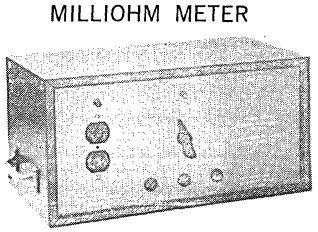
SLIP RING COMMUTATORS



- Integrated with remote controlled stepping switch
- Lift off brushes
- Multiplexing for temp. and strain gauge read out of rotating machinery

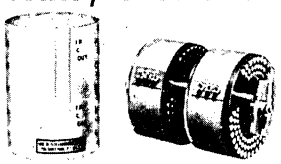
INSTRUMENTS

DC-AC INVERTERS
PREC. DECADE RESISTORS
KV-VOLTAGE DIVIDERS
MILLIOHM METER



ATTENUATORS

ROTARY/VARIABLE



- Five basic models — 1 7/16" to 3" dia.
- All circuit configurations
- Wide range of impedance
- Available with detents, tapers and cueing
- Aluminum anodized can
- Precious metal contacts
- Up to 45 steps
- Audio, video and RF

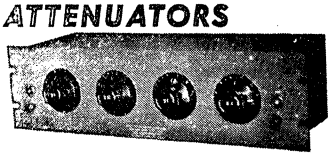
FIXED ATTENUATORS

- Two basic models
- Standard circuits "T" and Bridged "H" — others available
- Octal plug-in base available
- Up to 80 db loss
- Many impedance available

VERTICAL/VARIABLE

- Two basic models — 1" and 1½" wide
- Many circuit configurations available
- Wide range of impedance
- Available with detents, tapers and cueing
- Black anodized escutcheon plate
- Precious metal contacts
- Up to 30 steps

PRECISION ATTENUATORS



TYPE 11T AND 11H PRECISION ATTENUATORS — DC to 10 MHz*

- Circuit: "T" or Balanced "H"
- Impedance: 50 to 600 ohms, as specified
- Resistor Accuracy: ±0.1% or better
- Accuracy: ±0.1 db to 200 KHz (overall) ±0.6 db to 2 MHz
  Lower values of loss, essentially flat to 10 MHz

Type No.	Circuit	db Range	db/ Step	Dimensions
11-T	"T"	111	0.1	5¼"x19"x5"
11-H	Bal. "H"	111	0.1	5¼"x19"x10"

* On Low Impedance Units, Lower Losses Usable to 100 MHz.

TYPE 850T AND 850H FOR THE AUDIO RANGE

- Circuit: "T" or Balanced "H"
- Impedance: 600/600 ohms unless specified — Other values to order
- Range: 2 dial unit gives 93 db in 0.1 db steps: 3 dial unit gives 111 db in 0.1 db steps
- Terminals: Telephone type jacks for input and output — Solder terminals provided on rear for permanent connections: Insertion of plugs into jacks lifts rear connections
- Accuracy: Resistors adjusted to ±0.1% excepting low values of loss are ±.25%

UNIMAX: BETTER SWITCHING SOLUTIONS

Lighted Pushbutton Switches

status symbols®

In a field full of appearance quality/performance switching variables, Unimax switches are the ones that show you care about quality, performance and price.

- *Single Lamp* —Round, square or rectangular, lighted and unlighted, momentary or alternate switching. 1-4 poles. Flat, concave and mushroom caps.
- *Four Lamp* — Multi-switch configurations. Approved to MIL-S-22885/9-12. Also meets high-shock requirements of MIL-S-910C.
- *Oil-Tight* — Key-operated, Interlock and Multi-position models also available.

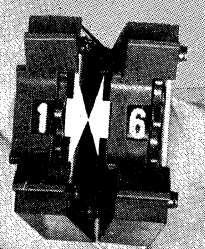
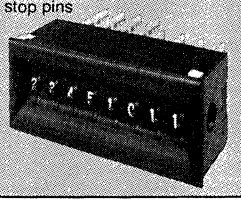
they SNAP together!

"No Hardware" Digital Thumbwheel Switches

- No assembly hardware required
- Large selection of output codes on standard models
- Built-in logic standard on "Smart Switches"
- Either Snap-in front, or rear hard mount
- Matte finish standard
- Only 5 parts per switch
- Standard .315" (8mm) width
- Removable stop pins

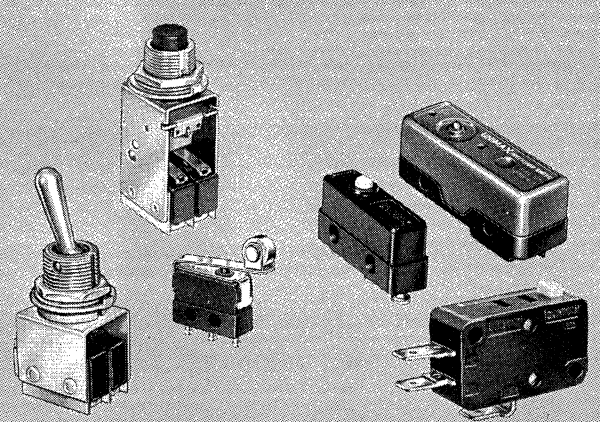




Ask for catalog 80.

The industry's widest selection of precision, general purpose, miniature and sub-miniature snap-action switches, as well as toggle and push-button switch assemblies. Ratings from low-level to 25A. All actuator styles available. Ask for catalog 60.

Snap-Action Switches



A full range of snap-acting switches enclosed in rugged die cast metal housings for protection against mechanical damage and, depending on the method of sealing, against destructive environmental conditions, Series KS (compact) is available with either through bolt or flange mounting. Series KL (heavy duty) is horsepower rated. Series KWL (splash proof) and KXL (explosion proof) are suitable for use in severe environments. All types are available with a variety of actuators. Ask for Catalog 30.

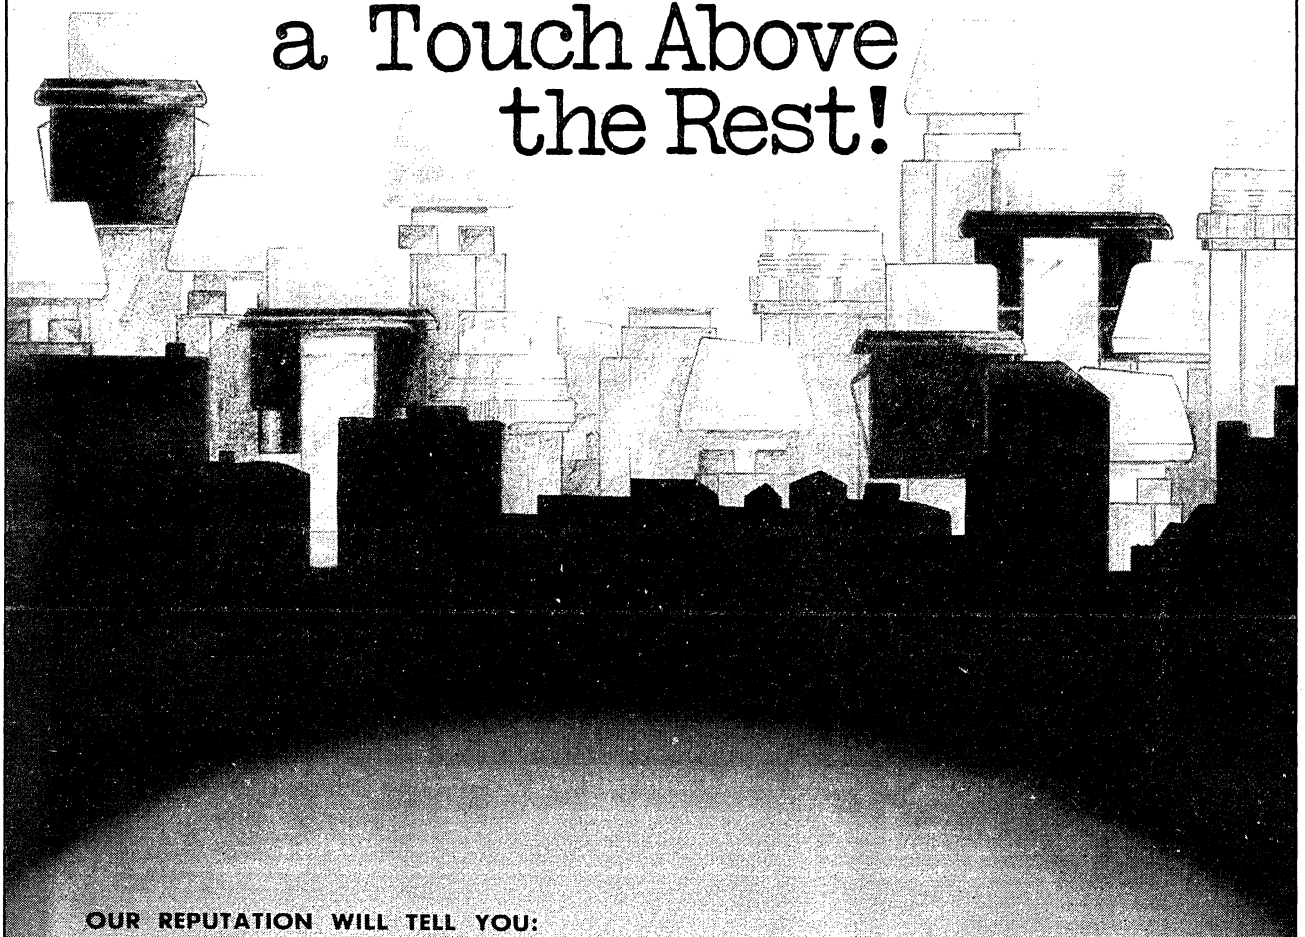
In a World of Touch'n Go switch to VEETRONIX & find out why we think we're a Touch Above the Rest!



OUR REPUTATION WILL TELL YOU:
With a decade of experience in designing and building switches our objective is to produce a reliable switch that meets your specifications, your time table and at a competitive price. With an in-house tool and mold shop we can respond to your needs quickly. We also furnish several OEM's with special items produced on proprietary tooling.

OUR SWITCH DESIGN WILL TELL YOU:
We design panel switches and key board switches, long and short series with bi-level, alternate actions and switching forms. Both are hermetically sealed reed switches with optional illumination. The key board switches are for PCB mounting with several options. We also design and manufacture a variety of switch caps, space-bar and supporting mechanisms.

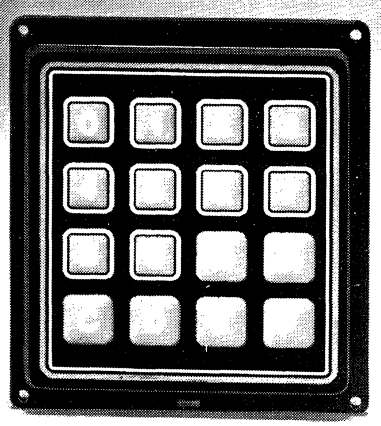
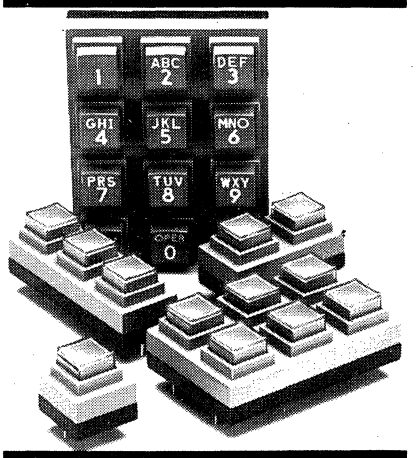
GRAYHILL KEYBOARDS: DIFFERENT STROKES FOR DIFFERENT FOLKS

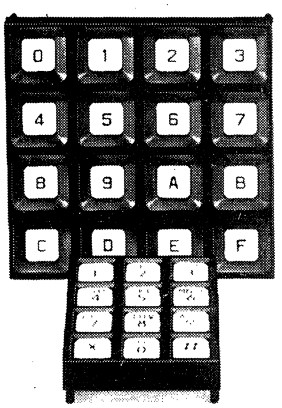
SERIES 88 A short stroke *sealed* keyboard with excellent audible and tactile feedback. Colorful standard or custom-made graphics integrates this keyboard into your front panel. Coded outputs and low bounce characteristics easily mate with logic circuitry.



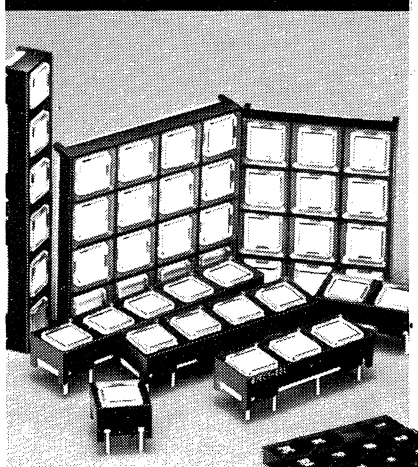
SERIES 82 Long stroke high profile, wiping contacts, 1, 2, 3 and 6 button modules can be arranged for your specific needs. SPST to 4PST circuitry under each button; also available with coded outputs.



SERIES 83-84-86 Short stroke standard 3x4 and 4x4 keyboard configurations. Choice of ½ inch or ¾ inch button centers and post or flange mounting. Standard coded outputs—easily interfaces with logic circuitry. Excellent audible and tactile feedback.



SYSTEM 87 Short stroke low profile, snap dome contact system provides tactile and audible feedback. Modular units—1 thru 6 buttons and 3x4 and 4x4 pads can provide any conceivable button arrangement. Clear caps snap off for legending.



Your product is distinctive, and thus your keyboard needs are also likely to be unique. That's why Grayhill offers you four different keyboard families, with a host of options in each. We'll help you arrive at the keyboard solution that's most practical, attractive, and cost effective. Two of our four families—Series 83-84-86 and Series 88—are built around the popular 3 x 4 and 4 x 4 keyboard configuration; the other two—Series 82 and System 87—are modular, allowing you to create any unique keyboard arrangements.

Other features and options include:

- up to 3,000,000 operations per button
- standard or special coded outputs
- sealed or unsealed
- high or low profile
- short stroke or long stroke—dome or wiping contacts
- excellent audible and tactile feedback in dome contacts
- post, flange or PC mount
- ½", 11/16" or ¾" button centers
- wide choice of legending modes
- color choices

For detailed information on Grayhill Keyboards, consult EEM, ask your local distributor, send for a copy of The Grayhill Keyboard Catalog or call us with your questions at (312) 354-1040.

Keyboards and Keypads provide the physical interface between humankind and a wide variety of machines which make our lives more pleasant, more productive and/or more frustrating. As in most electromechanical products, the designer engineer has several alternatives when it comes to selecting keyboards and keypads. Four primary considerations apply: 1. The Environment; 2. Operating Life; 3. The Nature of the Equipment; and, 4. Equipment Cost. Each of these factors impacts each of the others.

The Product Selection Guide which appears below can provide the design engineer with a quick guide to the data pages in EEM where descriptions of the various keyboards are shown. When more information is needed you can turn to EEM's "Yellow Pages" to find the phone number of the nearest sales office for the manufacturer involved. Some manufacturers include distributors and their phone numbers. Or, you may choose to call the manufacturer directly.

Before calling a manufacturer, make certain you can tell the person who answers (usually an operator) the exact nature of your problem. For example, if you need technical assistance, tell the operator exactly that. Chances are your call will be quickly routed to the proper person and you can get right to the heart of the matter. It would be helpful if you would tell the person you are looking at a specific page in EEM so that the person on the other end can also turn to that page in their copy of EEM to better communicate with you. The overwhelming majority of manufacturers are anxious to assist you in every way possible. That's why they place data pages in EEM. Help them help you.

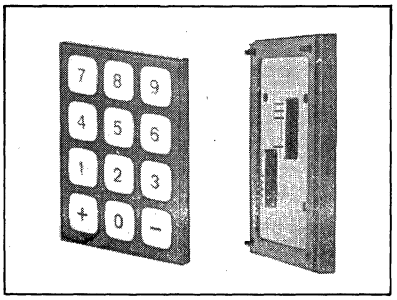
AMP keyboards—technology and experience to give your products a competitive edge.

Proven in more than 1,000 diverse applications . . .
■ Consumer products ■ Telecommunications ■ Data processing ■ Appliances ■ Instrumentation

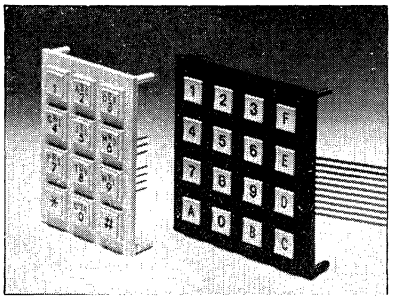
Gives you more choice . . .
■ Standard or custom designs ■ Micromotion to full travel ■ Sublimated graphics that won't peel or wear ■ Static protection ■ EMI/RFI Shielding

And more choice . . .
■ Temperature range: —40°C to 70°C ■ Key travel: 0.005 to 0.125 inch ■ Profile thickness: 0.015 to 0.625 inch ■ Life: 1 to 10 million operations ■ Encoding: single pole, matrix, or custom ■ Operating force: 3 to 18 ounces ■ Termination: Printed or flex tail (range of center to center, 0.100 inch minimum) ■ Capacitance: ≤20 pf ■ Contact Bounce: ≤3 ms ■ Contact Rating: 20 ma at 30 vdc

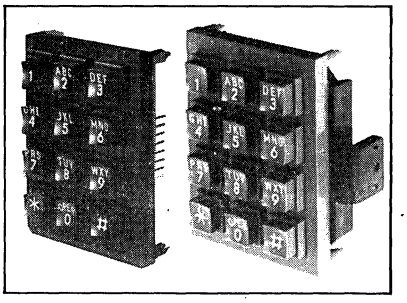
And high reliability
■ Designed and tested to meet the requirements of **MIL STD 810C**



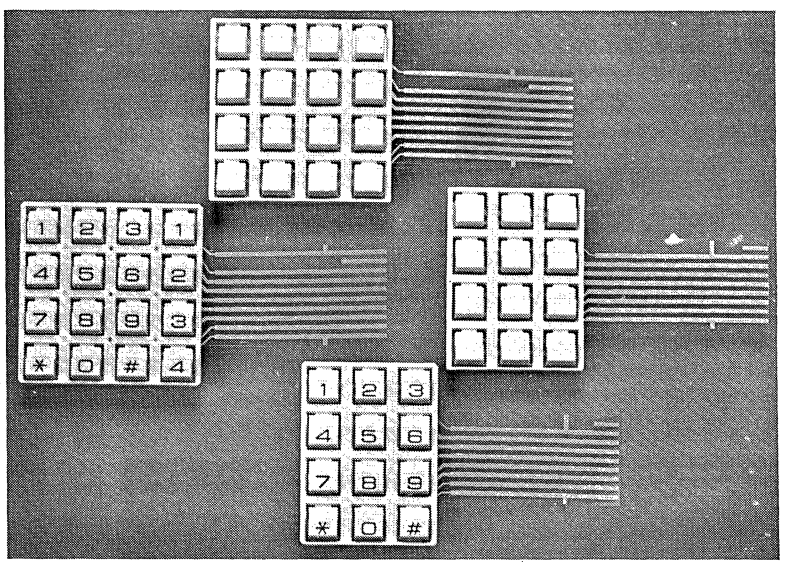
Model EC Environmentally-Sealed Tactile Keyboards
■ Environmentally resistant design ■ "Snap action" feedback for positive data entry ■ Electrically and physically stable ■ Standard and custom legend formats available ■ Life — 1 million operations
Request Catalog No. 81-637



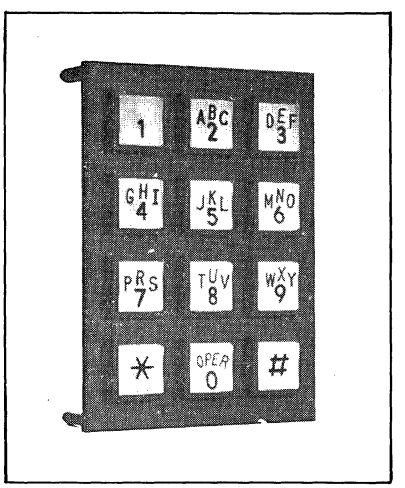
Short-Stroke ET Keyboards
■ "Snap action" feel ■ 12 and 16 key models available ■ Long life — 10 million operations ■ Matrix encoding standard with other options available
Request Catalog No. 81-639



Long-Stroke LT & BT Telephone Keyboards
■ Western Electric and GTE telephone keyboard "look-alike" ■ Simple mounting ■ Standard and optional encodings available ■ Low cost ■ .125 [3.18] key travel ■ Life — 10 million operations
Request Catalog No. 81-641



Model EH Hinged-Key Keyboards
■ Several encodings available ■ Low profile tactile feedback ■ Stackable for large arrays ■ Life — 1 million operations
Request Catalog No. 81-640



Model BL (Back Lightable) Tactile Keyboards
■ Translucent keytops ■ Proprietary key marking insures long wear ■ Snap-action tactile feel ■ Long life — 2 million operations ■ Easy front panel mounting
Request Catalog No. 81-642

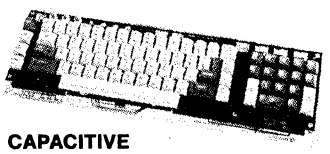
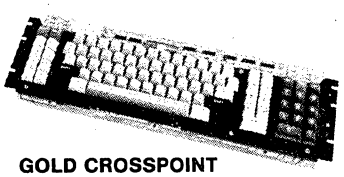
CHERRY keyboards and displays

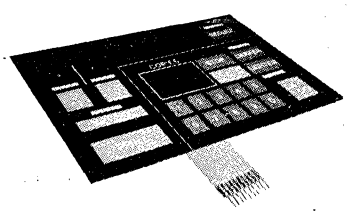
KEYBOARDS



CAPACITIVE
Highly reliable solid state design make capacitive keyboards ideal for any and all high speed data entry. Applications include computers and word processors. Custom designs available.



GOLD CROSSPOINT
Knife-edge gold alloy contacts virtually eliminate interference from contaminates, are inert to chemical action and assure long service life. Completely encoded, standard models are available for off-the-shelf delivery. Custom designs, encoded and non-encoded, are available.



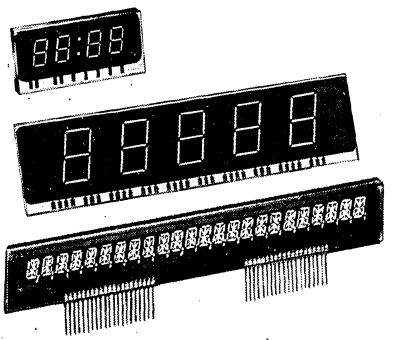
TOUCH PANEL

Touch panel membrane keyboards are thin, lightweight and cost effective—ideal for demanding applications such as electronic and office equipment, home appliances and communications equipment. Completely sealed construction resist spills and corrosive attack. Each panel is custom designed to meet your requirements.

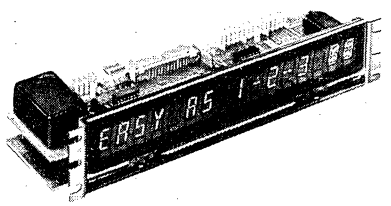
KEYBOARD SWITCHES AND KEYCAPS

Individual gold cross-point switches are available with a variety of contact forces in both lit and un-lit versions.
2-shot and 3-shot molded keycaps in almost any size, color, character or shape—including sculptured and stepped versions.

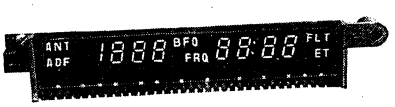
DISPLAYS AND DISPLAY SYSTEMS

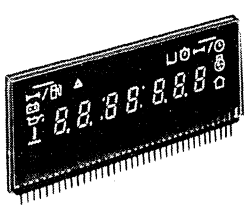


Numeric and Alphanumeric Display Panels. Seven and 14 segment displays with from 4 to 24 digits. Character heights from 0.25" to 2". Customized characters available.

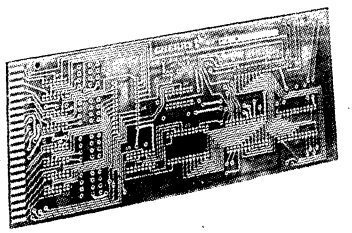


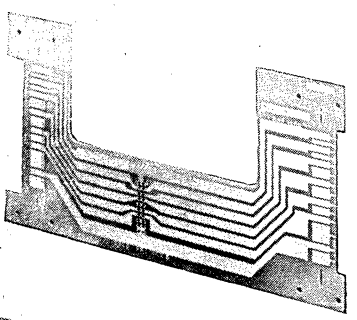
Alphanumeric display systems with easy-to-add-on option boards of electronics that offer a wide range of functions.



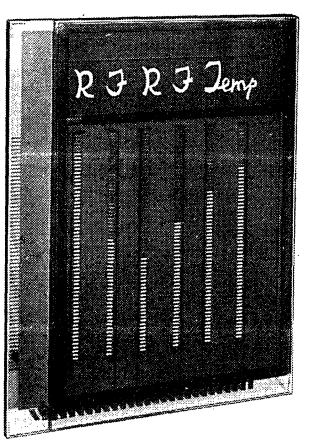


CUSTOM PC BOARDS





In-house engineering, design, manufacture and assembly with 3 to 6 week delivery



CUSTOM PANELS • MULTI-DIGIT CHARACTERS • LEGENDS • SYMBOLS

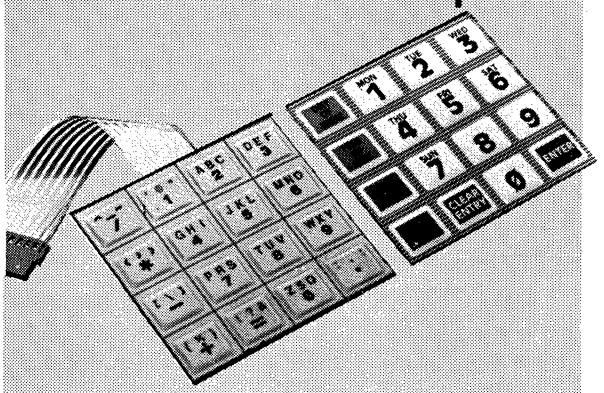
FLEX-KEY

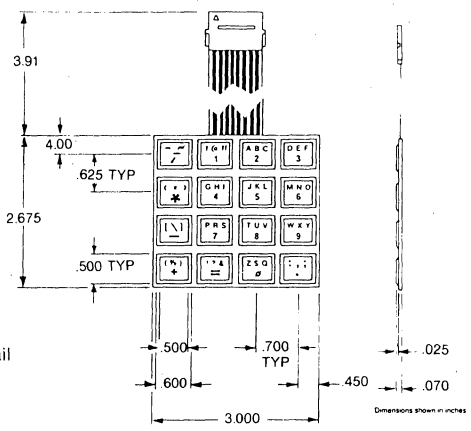
FLEX-KEY CORPORATION. 18 Sargent Street, Gloucester, Massachusetts 01930 (617) 281-2040

Standard Low Profile Touch Panels with Tactile Snap Action

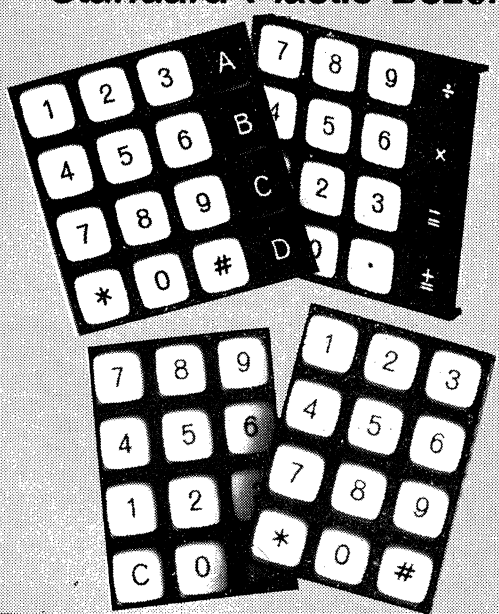


Customizing options include:

- special legends
- special circuits
- EMI/ RFI shielding
- static discharge protection.
- choice of colors
- choice of connectors
- interconnection tail length
- overlay size and shape



Standard Plastic Bezel Keyboards



Customizing options on Flex-Key's plastic bezel keyboards include:

- key size, shape and arrangement
- legend and background colors
- terminal type and location
- switch matrices

Militarized Full Travel Keyboards

These rugged custom units meet military requirements for vibration, shock, fungus, water, dust, salt spray, EMI/RFI, thermal, blast, EMP, high/low temperature, and key cycle life. Full tempest shielding is available.

Flex-Key engineers its militarized full-travel keyboards for optimum reliability and continuous operation while meeting all human factor requirements. These conductive elastomer keyboard assemblies provide command, control, communications, and data entry functions and have proven themselves in many demanding applications.

Specifications

Rating Criteria

Rating At 24 VDC: 10 milliamps, resistive.

Contact Resistance: Compatible with MOS, TTL and DTL

Voltage Breakdown: 250 VAC between mutually insulated parts.

Life Expectancy: 3,000,000 operations per button.

Contact Bounce: Less than 4 milliseconds at make, 10 milliseconds at break.

Operating Temperature: -40°C to +80°C.

Materials and Finishes

Housing: ABS Plastic (Black).

Button: ABS Plastic (White with Molded-in Black Legend; White Self-Legend Style.

Snap-On-Cap: Clear Polycarbonate.

Terminals: Copper Alloy, CDA No. 725.

Operating Features

Button Travel: 0.015" nominal total travel.

Typical Operating Force: 350 grams.

Note:

The 2 out of 7 (8) "Telephone Code" was developed primarily for audio tone generation. To discuss critical data input applications, please contact Grayhill.

Code and Truth Tables—See GRAYHILL Catalog Number One.

Specifications—See the Specifications listed for the Series 83, 84 and 86 Keyboards.

Graphic Overlay Characteristics

The legend is printed on the second surface of a graphic overlay providing maximum legend protection. The graphic overlay is made of a polyester material which has excellent solvent resistance to water, petroleum oil, alcohols and aliphatic hydrocarbons. Common solutions that do not attack the graphic overlay include 5% acetic acid, 5% citric acid, 2% detergent solution, soapy water, 30% hydrogen peroxide, wine, beer, whiskey, coffee, cocoa, milk, tomato juice, lemon juice, etc. The graphic overlay is resistant to scratching, marring, and dulling of the surface from contact by fingernails, wiping cloths, and cleaning materials; it will withstand high humidity conditions.

Although the polyester overlay may not be affected by hydrocarbons, ketones and freon, it is recommended that these chemicals *not* be used since they may affect the switch housing and overlay frame which is ABS Plastic. For specific information on a particular solvent, contact Grayhill.

Panel Seal Gaskets

The Series 88 sealed keyboards can be mounted on the top side or front of the panel or subpanel mounted. When subpanel mounted, the keyboard surface can be flush with panel. Regardless of the type of mounting required, a gasket is available to seal the keyboard to the panel. The drawings at the right describe the gaskets for top side and subpanel mounting. Material is cellulose fiber, foam, nitrile rubber. Order gasket as a separate item.

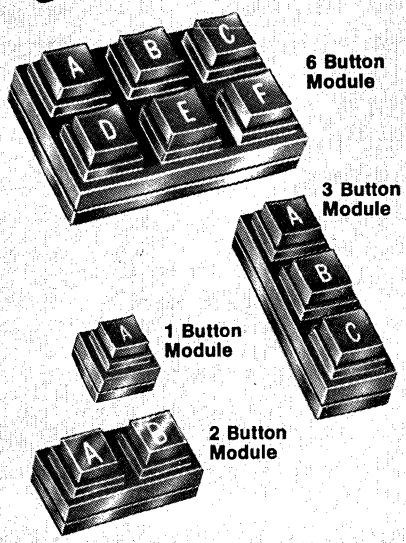
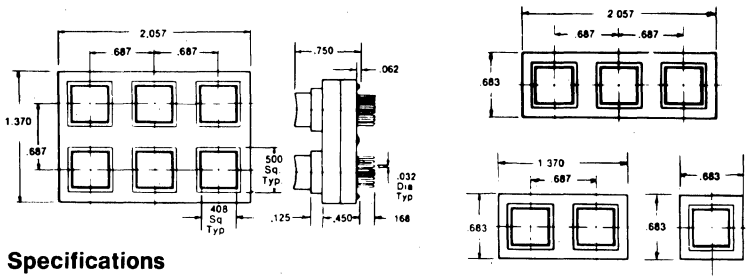
Modular Keyboards
Series 82—Long Stroke, PC Mountable



- **Create Your Own Keyboard Configuration**
- **Modules Retain 0.687 Centers When Placed Side By Side**
- **SPST To 4PST Under Each Button**



Specifications

OPERATING FEATURES:

Button Travel: 0.130" total travel.

Overtravel: 0.080" nominal.

Operating Force: 8 ± 3 ounces (dependent upon number of poles).

MOUNTING:

Modules are designed to plug into any printed circuit board from 1/16" to 1/8" thick.

Modules can be stacked horizontally or vertically for any combination of button array and still maintain 11/16" button centers.

RATING:

Rating at 5 VDC: 100 milliamps.

Contact Resistance: 25 milliohms or less on a new switch.

Voltage Breakdown: 250 VAC between mutually insulated parts.

Insulation Resistance: 1,000 megohms minimum.

Life Expectancy: 1,000,000 operations.

Contact Bounce: 10 milliseconds or less for the life of the switch.

Contact Grayhill to order printed legends.

Grayhill, Inc. / 561 Hillgrove Ave. / P.O. Box 373 / La Grange, IL 60525-0373 / (312) 354-1040

Keyboard Modules
The Stackable SYSTEM 87

- Low profile
- Long life — 3,000,000 operations
- Positive audible and tactile feedback

Select the modules you require to build your own keyboard design. The modules can be stacked side by side on your prototype PC board in any configuration that is required. ½-inch button centers will be maintained.

Circuitry is single pole/common bus in the single row switches and single pole/common bus or matrix code in the 3 x 4 and 4 x 4 keyboard pads.

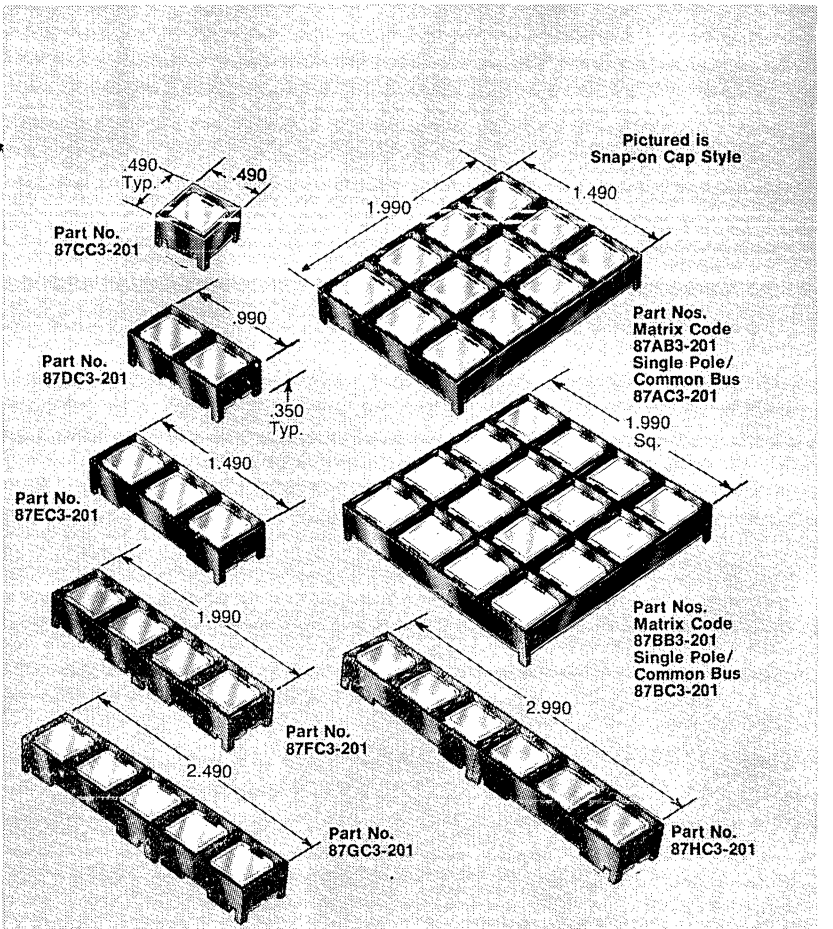
Prototype and Short Run Production

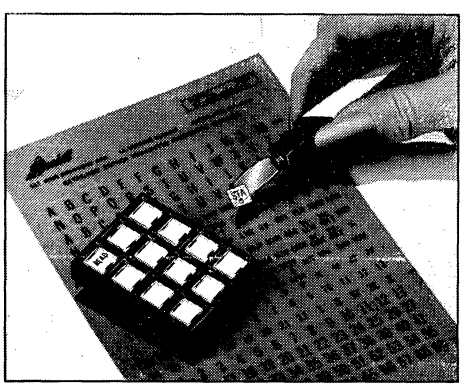
Arrange the modules in the required array on your PC board. Snap-on cap allows user to legend button with inserts from legend card and/or dry transfer lettering. For moderate quantities legends can be printed on the button by Grayhill. Printed legends will closely duplicate your prototype legend.

High Volume Production

Grayhill will provide a custom keyboard. The modules will be arranged and the board terminated to your specifications.

Legends — your choice of printed or molded-in legends; button color and legend color.





Prototype Legends

GIVE THEM A PROFESSIONAL APPEARANCE

The System 87 modules described can be easily legended by you. The clear, protective, snap-on cap removes readily without special tools. To assist you, GRAYHILL has a legend card (Part No. 87AC2046) which includes all the popular legends and symbols on a clear insert, die-cut to fit the button. Type style is News Gothic Condensed.

Or, create your own legends. The GRAYHILL card contains blank inserts for your special needs. For this purpose, sheets of dry transfer lettering are also available in type style and sizes similar to the chart below. A sheet of small type is part number 87DT2096-088; medium is 87DT2096-125; and large is 87DT2096-187. You can also prepare and cut your own legend inserts. They should be cut to fit a 0.275" square surface.

ORDERING INFORMATION

All numbers describe self-legend style. Contact Grayhill for other legends.

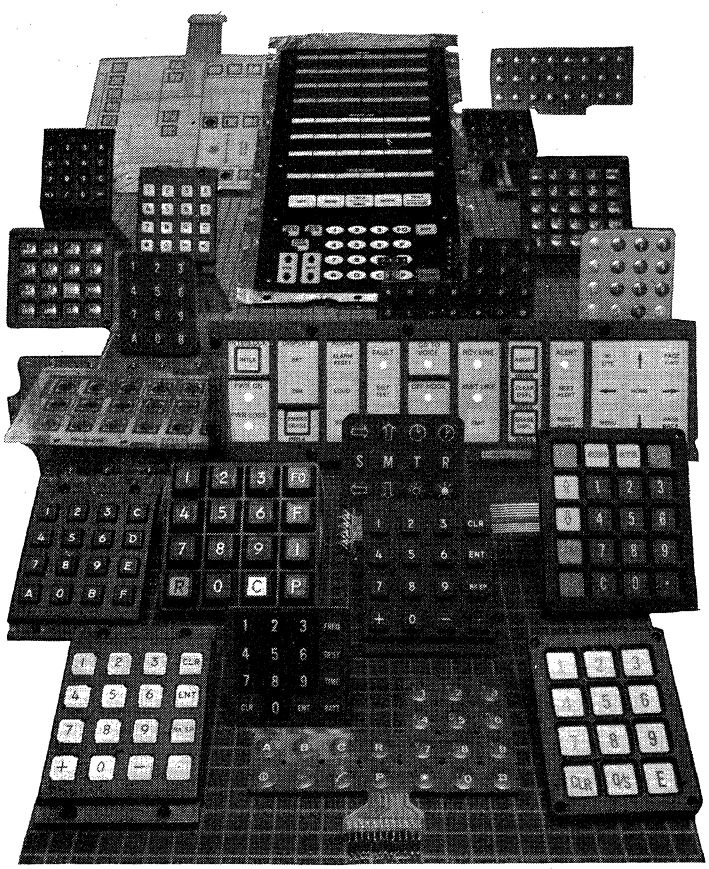
Planar Products Division

For over fifteen years IEE has been the quality leader in keyboards for commercial, industrial and military applications. Today more than 100,000 are in use worldwide, performing reliably despite constant exposure to dust, dirt, corrosive atmospheres, submersion in water, extremes in altitude, to wide temperatures and humidity ranges.

A continuing dedication to high quality is the reason for our success. This can be seen in features like high grade polyester, a special sealing process to keep out moisture, and etched circuitry instead of silkscreened ink for low contact resistance, better quality and longer life. The results are switch products with the highest reliability — with most exceeding many military test requirements. Keys to the maintenance of this reputation for quality are the talents of our engineering staff, the efficiencies of large scale manufacturing, and an exceptionally rigorous quality assurance program.



STANDARD KEYBOARDS

IEE's wide selection of standard keyboard models offers you an opportunity to save costs by consulting with our engineering staff and designing in our standard keyboards in what you might have considered a custom application. Our standard keyboards include: Hi-Rel and INDUSTRIAL PANELSWITCHES™, THINSWITCHES™, SEALEDSWITCHES™ and TELSWITCHES™.

CUSTOM KEYBOARDS

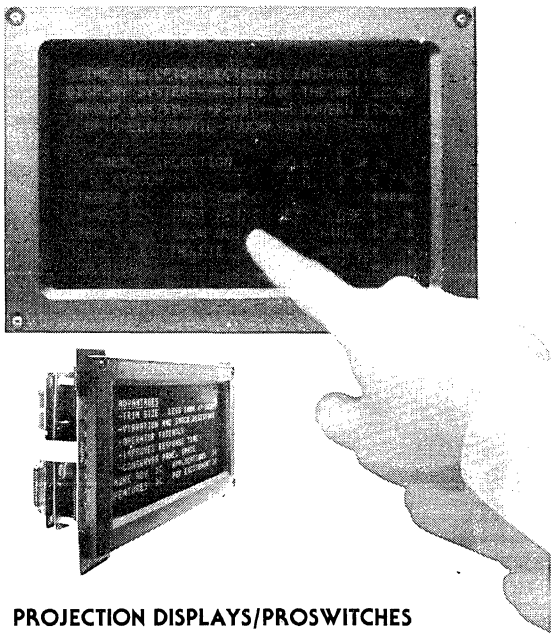
Custom configurations include: special coding/output, multiple color combinations; any number of custom arrangements; keyboards that are resistant to highly caustic solutions; stainless steel construction; EMI/RFI shielding; varying actuation force and key travel; movable legends and rigid backs, wide temperature range, high humidity. Incandescent, LED and electroluminescent backlighting is also available.

INDUSTRIAL ELECTRONIC ENGINEERS, INC. • 7740 Lemona Ave., Van Nuys, CA 91405 • Telephone (213) 787-0311 • TWX: 910-495-1707

Special Products Division

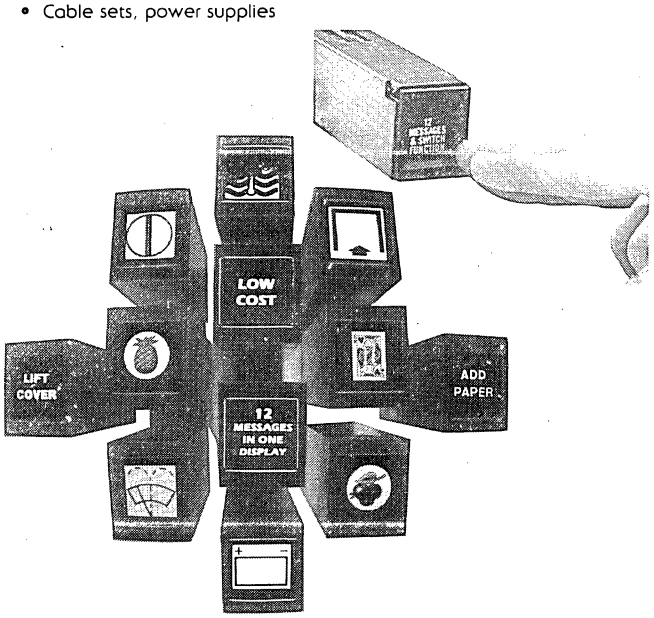
The Special Products Division (SPD) features a wide selection of display and interactive display products. In addition to our standard products SPD has the engineering expertise to recommend and build custom display solutions using many advanced display technologies.

PEP™ INTERACTIVE TOUCH DISPLAYS



PEP is a powerful interactive touch display panel. PEP incorporates the features of a DC plasma display with an invisible switch matrix covering the screen. The operator can be prompted to touch anywhere on the screen by your instructions or menu on the display. PEP can take on any desired control function, limited only by your software. The advantages, features and options include:

- Eliminating the need for keyboards, pads, indicators, and switches
- Reducing operator training
- Trim size - less than 4" deep
- 256 or 480 character display sizes
- Choice of 4 interfaces - Serial/Parallel
- Red, orange, or green characters
- Finished bezel with polarizing filter
- On-board character generation and refresh memory
- Cable sets, power supplies



PROJECTION DISPLAYS/PROSWITCHES

TITAN Projection Displays are the world's most extensively used family of graphic displays. The line offers many features not found in other display technologies.

- The most cost effective system for displaying any image in any color
- Displays can be programmed to feature from 11 to 48 messages
- Over 15 models with display screens ranging from .076" to 3.375"

Recent advances include modular lamp assemblies and a new aspheric lens system for greater illumination. Our PROSWITCH series combines the features of projection displays with a tactile, membrane, or opto switches. Projection displays and PROSWITCHES can save panel space, provide a significant reduction in hardware and wiring, and a noticable improvement in man/machine interface. Commercial and ruggedized configurations are available.

DISPLAY SUB-SYSTEMS

The Special Products Division has the capability to engineer the best man/machine interface solution using a wide spectrum of display technologies. Recent programs have involved meeting the custom requirements for a wide range of commercial, industrial and military applications.

Display accomplishments include a ruggedized 10" square interactive panel with over 1400 color and graphic messages, support electronics, and single interface connection. Another program involved a PEP Touch Display militarized with a high MTBF, RFI shielding, and meeting exacting MIL vibration standards.

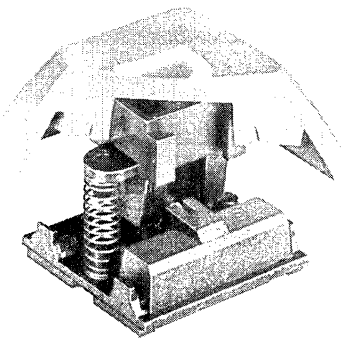
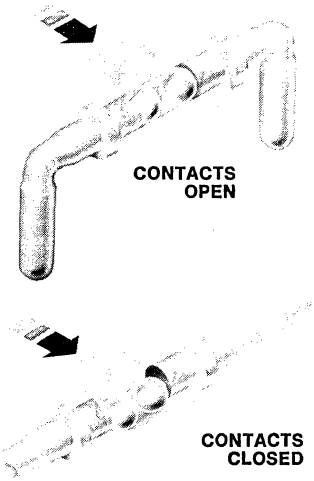
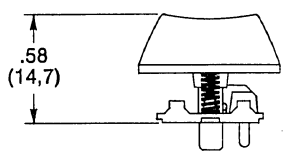
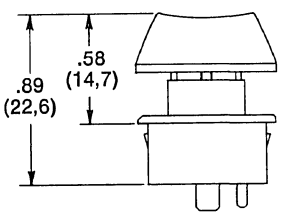
TEMPERATURE, OPERATING:	−20°C TO 75°C
TEMPERATURE, STORAGE:	−40°C TO 85°
CONTACT BOUNCE:	3 ms MAX.
UL FLAMMABILITY RATING:	94-HB
LIFE:	15 x 10^6 OPERATIONS



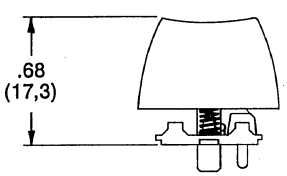




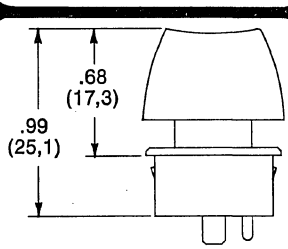
DN500 WITH L STYLE KEYTOP FOR ¾" CENTER MOUNTING.



DN600 WITH L STYLE KEYTOP AND 7.8 MM KEYTOP COUPLING FOR ¾" CENTER MOUNTING.



DN500 WITH C STYLE KEYTOP FOR ¾" CENTER MOUNTING.

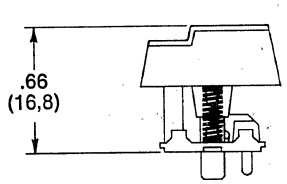


DN600 WITH C STYLE KEYTOP AND 7.8 MM KEYTOP COUPLING FOR ¾" CENTER MOUNTING.

DN switches work in your product's environment because the contacts are sealed in a silicone rubber tube. And since they are sealed, the contacts can be silver with its lower cost and cleaner electrical characteristics. That's why DN reliably tests to over 15 million cycles.

DN switches also work in your production environment. With just a few snap-on parts, you can configure any switch in the line. So stocking for various keyboard configurations is simple and cost effective. Also with sealed contacts and switch modules that clip tightly to the PC board, wave soldering with a water wash is easy.

From top of PC board to top of double shot keytop, DN switches measure less than 15mm — easily meeting the new standards for low profile terminal keyboards. Or consider the DN switch to replace a touch panel with a "user friendly" keypad without sacrificing panel space.



DN500 WITH E STYLE RELEGENDABLE LENS KEYTOP LIGHTED WITH 1 OR 2 LED'S FOR ¾" CENTER MOUNTING.

MICRO SWITCH KEYBOARDS...

Quality and Reliability, each carries a 1% Acceptable Quality Level and a 2-year Warranty*

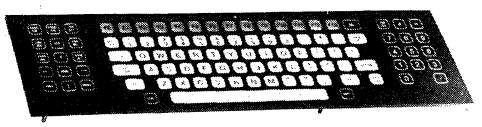
Until now getting a keyboard at the price you needed could have meant giving up the kind of performance you wanted. Not anymore. Now, in addition to our time-proven solid state Hall effect offerings, you can specify full travel capacitance or contact membrane keyboards in either standard or low profile (DIN standards) or touch panel membrane keyboards.

And you get them all — custom or off-the-shelf — backed with the experience and full application support that's been a MICRO SWITCH tradition.

SD Series Hall Effect Keyboard (104SD30)

FEATURES

- Solid state Hall effect keys with a single chip microcomputer
- 4-mode 8-bit USASCII code assignment . . . Key array in 4-language configurations
- Parallel data 8-bits and strobe . . . 50 microseconds nominal strobe pulse
- Serial output . . . 1-start, 8-data, even parity, 1-stop (TTL compatible) with choice of 4 baud rates
- Electronic shift lock with LED indicator
- Choice of 4-tones for audio feedback
- Manual/Auto repeat for designated keys . . . Repeat key controls repeat for other selected keys
- 1-function key . . . positive or negative logic
- 1-shift lock key, 2-shift keys, 1 control key, 1 alternate action caps lock key
- 121 possible coded keys, 6 mode keys, 1 function key
- 14 LED's in top row with current limit resistors
- 8-byte FIFO (first-in first-out) character storage
- N-key rollover
- Operates on a single 5 VDC supply
- Life . . . 100 million operations
- MCBF . . . 20 billion operations

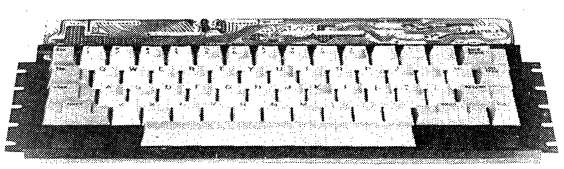


TC Series Touch Panel Keyboard (TC 454)

FEATURES

- Customized design. Graphics, colors, styles, and formats can be selected to achieve optimum clarity of operating functions
- Advanced construction and manufacturing processes. Reflects the MICRO SWITCH commitment to quality, reliability and performance
- Tactile feedback. Snap-disc provides positive feel of switching action; embossed touch surface enables positive finger positioning
- Micro-travel (.016 in. nominal)
- Environmentally sealed. Protects against contamination of switch contacts
- Provides both serial and parallel data outputs
- Pin-for-pin compatible EPROM capability
- Operates on a single 5 VDC supply
- Ultra-low profile membrane easily adapts to styling and package size requirements
- Channel venting. Prevents temperature/altitude changes from affecting operating characteristics
- Life . . . 2 million operations (5 million w/o snap disc)

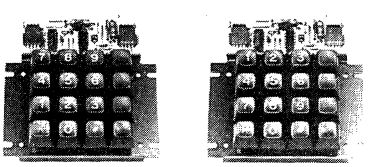
* One year warranty



SC Series Low Profile Capacitance-membrane Keyboard (58SC36-2)

FEATURES

- European ergonomic standards compliance
- Only 18,6 mm (.732″) nominal profile
- 3,2 mm (.125″) nominal key travel
- N-key rollover
- Parallel/serial data outputs
- Environmentally sealed membrane protects against liquid spills, airborne dust and moisture
- Internal venting protects from the effects of ambient temperature and pressure changes
- Tactile feedback gives a smooth, crisp feel
- Electronic shielding reduces problems caused by electrical noise, cross coupling and stray capacitances
- Low power consumption
- Life . . . 30 million operations



CT Series Contact-membrane Keyboard (16CT)

FEATURES

- Environmentally sealed membrane protects the contacts from contamination
- Internal venting protects membrane from effects of ambient temperature/pressure changes
- Tactile feedback and hysteresis gives smooth, crisp feel of the switching action
- Adherence to good human factor principles promotes maximum throughput
- Two-key rollover
- Encoded for adding machine or telephone format
- Operates on 5 VDC supply
- Full-travel (150″ nominal)
- Life . . . 10 million operations

WORLDWIDE SALES AND SERVICE

For technical literature on any of the general sale listings shown, application assistance, pricing and delivery scheduling; contact your nearest MICRO SWITCH Sales Office, write or call MICRO SWITCH, Freeport, IL 61032, Tel. 815/235-6600.

If your application calls for keyboards "sealed for hostile environments" NEMA 2, 3, 3R, 12 and 13, and military specifications MIL-STD-202 contact MICRO SWITCH, Freeport, IL 61032 for off-the-shelf listings.

MICRO SWITCH, a Honeywell division

OAK KEYBOARDS, KEYPADS, KEYSWITCHES

OAK 81 POSITION STANDARD FTM° KEYBOARD

- Low Cost
- Reliable
- Long Life
- Easy Interface
- Sealed
- Automated Assembly E³ Optional

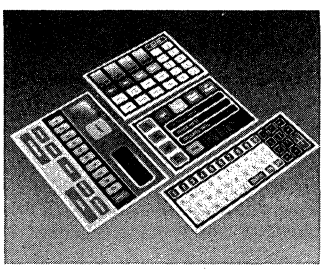
This is a full travel membrane keyboard to provide the latest high speed entry available. This unique keyboard features excellent long life parameters coupled with high resistance to environmental conditions.

The computer-controlled and adaptable membrane is the heart of this rugged keyboard. It features 81 standard keys with 79 momentary and 2 "lock" keys for "Shift" and "Caps." Life expectancy is in excess of 100 million per key. Pretravel is 0.80″ ±0.020″ and total travel is 0.160″.

Contact bounce is 500 microseconds (normal) and 5 milliseconds for hard rap induced bounce.

Operating voltage is from 1.0 to 30 V. Operating current is 50 microamps to 20 milliamps per single switch. Interconnection is row/column.

Complete specifications are available. Contact the nearest Oak sales office or distributor listed in EEM's "Yellow Pages" in this volume.



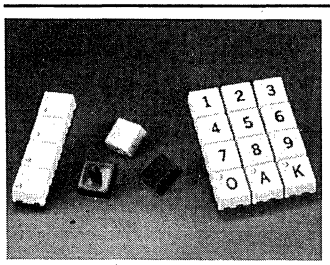
OAK TIP° (TOUCH-IN PANEL) MEMBRANE SWITCH

TIP switches operate reliably for over ten million cycles and offer the ultimate in environmental resistance and flexibility.

A wide variety of colors, key sizes and designs are available. The basic assembly consists of three parts; the outer membrane with graphics normally printed on the back for long life protection, a spacer and a substrate. The substrate is a P/C board with all of the connections and switches permanently positioned. Thousands of designs are possible.

Operating voltage is from 1 to 50 (AC or DC). Operating current is from 250 microwatts to as much as 1.5 Watts (peak).

Contact your nearest Oak sales office for complete details and specifications.



SERIES 225 LOW PROFILE PUSHBUTTON KEYBOARD SWITCH

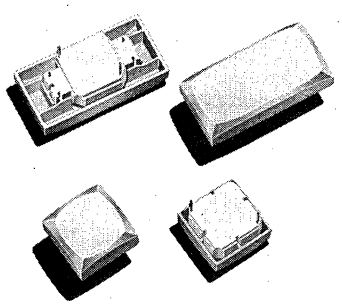
This new series of Oak keyboard switches is supplied in several styles: flattop, standard "cupped" and either .300″ high or the low-profile .225″ high style. Flattop models are available with red, green or yellow LEDs. All styles are .490″ square and are supplied in your choice of color and legend.

Standard mounting is by wave soldering to a P/C board. Almost any combination of key styles may be used on the board.

Typical life is in excess of one million cycles for operation over the range of −25° to +70°C. Maximum loads are 5 V (AC or DC) @ 100 mA.

A projection style is available for use with customer-supplied caps. All series 225 keyswitches are totally sealed for maximum resistance to any environmental hazards.

Contact the nearest Oak sales office for more information and/or specifications. See EEM's "Yellow Pages" for the office nearest you.



SERIES 415 KEYBOARD SWITCH

The series 415 keyboard switch is available in both single and double station styles. There are two standard sizes: .610″ square and .720″ square. The double station styles are: .610″ x 1.235″ and .720″ x 1.470″. The .610″ is available with the standard "cupped" design, a flattop or with a "raised" design which increases the height .062″.

Minimum operating life is ten million cycles under rated loads of 5 Volts (AC/DC) @ 100 mA.

This series mounts directly to a P/C board and keys are available in white, black, blue, red and gray. Standard markings are numbers 0-9 or blank. Special markings are available as are special key colors.

For more information, quotations, specifications or samples, contact your nearest Oak sales office listed in EEM's "Yellow Pages."

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

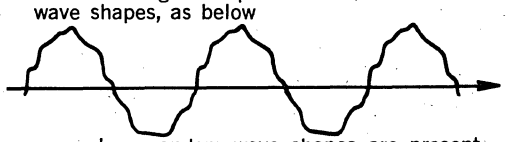
Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

Guide to types, models and applications of BEST vacuo-junction THERMOCOUPLES

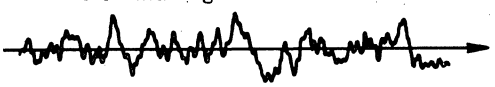
as used by leading instrument manufacturers for:

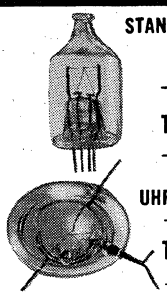
TRUE RMS MEASUREMENT

—where the signal is periodic with distorted wave shapes, as below



—or where random wave shapes are present, even with high crest factors





(Use either standard or UHF pattern, depending upon frequency)

LINEAR TRUE RMS MEASUREMENT

MATCHED PAIRS

	UHF TYPES		STANDARD PATTERN TYPES	
				
	Model MPU 1		Model MP1S7	Model MP219
Tracking accuracy	0.5%		0.5%	0.2%
Time constant	1 sec		1 sec	200ms
Nominal current	5mA		5mA	6.67mA

Tracking accuracy applies over full 25°C temperature range.

Single standard patterns for 5mA and higher, useable to −65MHz; for less than 5mA, usable to 10MHz.
Single UHF types usable to 500MHz
Temperature coefficient of output available from −0.2% per °C down to 0.005% per °C on special order.
Reversal error, standard 0.2%. Most models available with R/E down to 0.02%, some models to 0.005%.
Optional special features: short time constants to 50 ms; double heater devices, ultra miniature sizes.

PHYSICAL DATA, STANDARD PATTERNS

Height of envelope	0.900 inch
Diameter of envelope	0.437
Length of lead from envelope	2 ± ¼ inches
Length of sleeve from envelope	1¾ ± ¼ inches
Heater leads:	
Up to 400 milliamps	0.012 ± 0.002 inch diameter
500 milliamps and over	0.020 ± 0.002 inch diameter
Couple leads—all ranges	0.012 ± 0.002 inch diameter

PHYSICAL DATA, U.H.F. PATTERNS

Height of envelopes	0.750 inch
Diameter of envelope	0.800 inch
Width across heater leads	1.500 inches
Diameter of heater and couple wires	0.020 inch

Positive indicated by spot of red lacquer.
Specifications subject to change without notice.

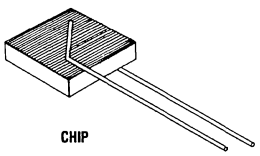
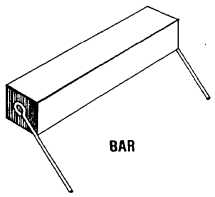
CAL-R, INC.

THERMISTORS

LEADED CHIP, BAR & CUBE

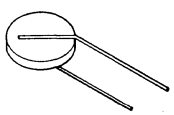
Cal-R Leaded chip and bar thermistors are produced from metal oxide ceramic materials utilizing a unique process which affords the highest degree of manufacturing control.





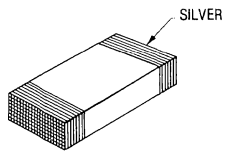
NTC DISCS

Maximum operating temperature 150°C (higher temperatures available).



HYBRID CHIP

Cal-R Hybrid Chip Thermistors are produced by the same exacting manufacturing process as the Leaded Chip Thermistor and demonstrate the same electrical characteristics. Only the configuration is changed in order that they may be mounted in hybrid circuits utilizing the same equipment and techniques employed in the installation of other hybrid components. Cal-R hybrid chip thermistors are available with either silver or palladium-silver terminations to meet your process requirements.



LINEAR PTC DEVICES

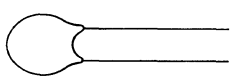
Temperature Coefficient: +.45%/°C & ±.02%/°C (+0.6%°C available).

EPOXY COATED — RESISTANCE TOLERANCE ±1, 3, 5 & 10%

INTERCHANGEABLE THERMISTORS

Thermistors designed for interchangeability over a temperature range of 0°C to 80°C without the necessity of recalibrating the system.

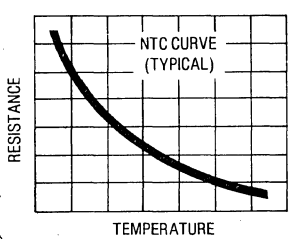
EPOXY COATED

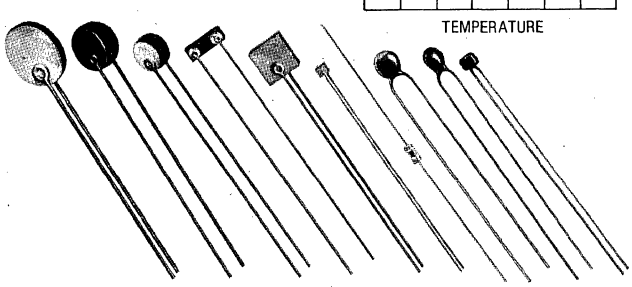


NTC (Negative Temperature Coefficient)

Thermistors offer inexpensive solutions to:

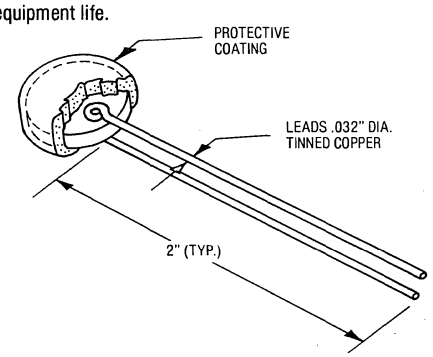
- Temperature Compensation
- Time Delay
- Soft Start
- Gas and Liquid Level Sensing
- Temperature Sensing and Control





SOFT START "INRUSH CURRENT" SUPPRESSING DEVICES

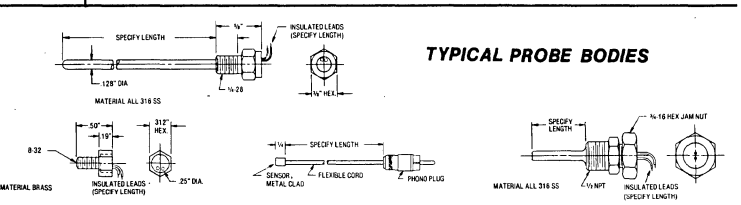
Cal-R Soft Start devices, made from rugged metal oxide ceramic materials, protect against high inrush currents in either AC or DC circuits. Soft Start affords protection for circuit components and assures longer equipment life.



TEMPERATURE SENSING PROBES

NTC, PTC & NETWORKS
(TEMPERATURE RANGE —60 TO +400°C)

Resistance (@ 25°C) range 50 ohm to 1 megohm — tolerance 10% to 0.5% or better.



TYPICAL PROBE BODIES

CAL-R probes are designed for air, surface, and liquid temperature measurement and control applications. Special industrial probes can be produced to customer specifications.

CAL-R engineers will design Temperature Sensing Probes for your special application. Outline your problem or specifications and send them to: CAL-R Applications Engineering Department.

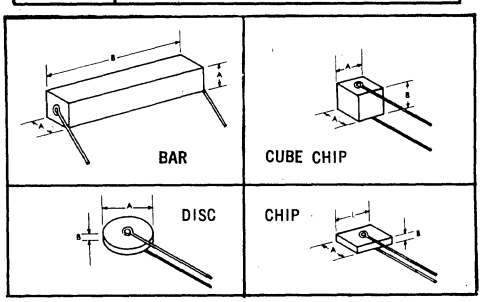
140	284	.0579	.0382	.0235
150	302	.0483	.0313	.0185

The alphabetical letter in the part number indicates the curve. To determine the approximate resistance of a thermistor at a specified temperature, multiply the thermistor resistance at 25°C by the ratio factor opposite that temperature on the R/T conversion table.

CURVE B	Ratio $\frac{R@\ 25°C}{R@\ 125°C} = 12.95 \pm 10\%$
CURVE D	Ratio $\frac{R@\ 25°C}{R@\ 125°C} = 19.8 \pm 10\%$
CURVE J	Ratio $\frac{R@\ 25°C}{R@\ 125°C} = 29.85 \pm 10\%$



***DISSIPATION CONSTANT**

Dissipation Constant, expressed in mw/°C, represents the amount of power required to raise the temperature of a thermistor 1°C.

****TIME CONSTANT**

Time Constant, expressed in seconds, is the time required for a thermistor dissipating zero power to change 63% of the difference between its initial temperature value and that of a new temperature environment.

CAL-R thermistors conform to AQL and confidence levels specified in MIL-T-23648, tables V and VI.

Coatings, marking, special leads, probes, resistor/thermistor networks, resistance values from 1 ohm to 150 KΩ, and other product variations are produced to meet your design requirements.

Resistance tolerances of ±1% through ±20% are available and may be specified at 25°C or any temperature within the operating range. Maximum operating temperature with leads 150°C.

"SOFT-START"

INRUSH CURRENT SUPPRESSING DEVICES

"Soft-Start" devices display relatively high resistance to starting currents in a variety of electronic circuits. Having a negative temperature coefficient of resistance, these devices exhibit a large decrease in resistance when an AC or DC current is applied.

Unlike circuit breakers and fuses, "Soft-Starts" prevent dangerous, short-duration, peak inrush currents present at turn-on. Especially useful in power supplies where charging capacitors initially present extremely low impedance, "Soft-Starts" actually limit inrush currents thereby extending the life of other critical components.

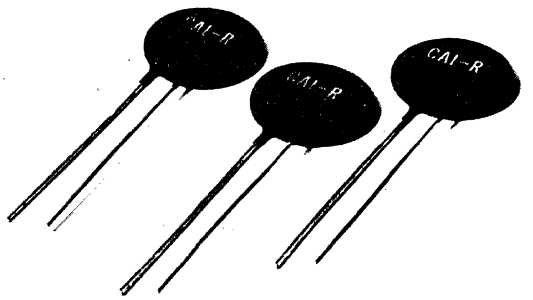
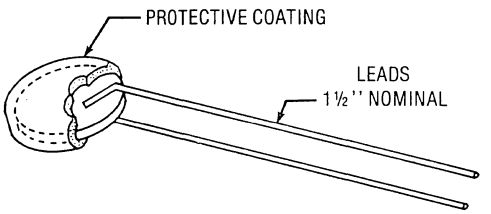
- Standard $R_0$25°C tolerance is ±20%. Closer tolerances are available upon request.
- Protective silicone coating is standard and has a nominal thickness of .02 inches. Other coatings are available upon request.
- Standard lead material is tinned copper-clad steel. Nickel or copper leads are available upon request.
- Special marking is available upon request.





DEFINITIONS

I_{max}
Represents the maximum rated steady state DC or RMS current and is expressed in amperes.

$R_0$25°C
Represents the zero power resistance of the device at +25°C and is expressed in ohms.

R@I_{max}
Represents the approximate resistance at maximum steady state current conditions and is expressed in ohms.

Ambient Temp.
Full rated current may be applied in the ambient temperature range of +25°C to +65°C and must be derated in accordance with I_{max} derating curve.

I_{op}
Represents the actual operating current applied.

Cool-Down Time
Is the amount of time needed for a "Soft-Start" device to cool enough to cause the necessary amount of resistance to limit inrush current.

CARBORUNDUM THERMISTORS

APPLICATION DATA

Carborundum thermistors are temperature dependent resistors, offered in a wide variety of resistance-temperature characteristics. They are available with a wide range of negative temperature coefficients at 25°C ranging from −0.3%/°C to −5.4%/°C. These parts are made from ceramic materials, bonded in a high-temperature firing process into rod, disc, and chip configurations. They are available in a large range of sizes, thermal characteristics, resistance values, and temperature coefficients to suit the needs of many types of electrical and electronic circuits.

Carborundum offers long experience in the design of special resistance devices. This, together with expertise in the field of ceramic technology, assures a stable and uniform product to meet your thermistor requirements. All materials used in the manufacture of Carborundum thermistors are of the highest quality. Strict quality control is maintained over all stages of manufacture, and a minimum of two calibrations at the specified reference temperature is standard.

DEFINITIONS

Zero Power Resistance... is the resistance of a thermistor at the calibrating temperature, measured in such a manner that the measuring current does not appreciably heat the thermistor. Resistance, as used here, means zero power resistance unless otherwise stated.

Beta (β)... is the number that satisfies the equation:

$$R_1/R_2 = \epsilon^{\beta\,(1/T_1 - 1/T_2)}$$

Carborundum determines beta from measurements at 25°C and 73.2°C. Beta is proportional to the slope of the resistance-temperature characteristic, and it is also known as the material constant. It is not truly a constant, but it gives a good approximation of resistance over a substantial working range. In the equation, ϵ is 2.718..., the base of natural logarithms, and β, T_1, and T_2 are in Kelvin (K).

Alpha (α)... or temperature coefficient of resistance (TCR) is proportional both to beta and to the square root of the temperature at which it is specified. Very nearly,

$$\alpha = -100\ \beta/T^2$$

In this equation, temperature is in Kelvin (K), and α is in percent per degree C (%/°C). It is evident that alpha becomes much higher as temperatures decrease.

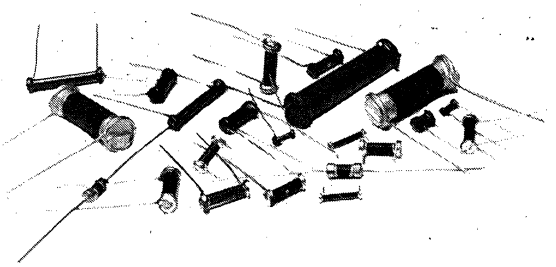
Dissipation Constant (δ)... is the ratio of power dissipated by the thermistor divided by the temperature rise above ambient due to self-heating. Here, it is 20 times the power required, in watts, to bring the thermistor to 75°C in an ambient of 25°C, and it is expressed in milliwatts.

Time Constant (τ)... is the time required for a thermistor which has attained equilibrium after being self-heated to 75°C to cool to 43.4°C in an ambient of 25°C. It is expressed in seconds.

Both δ and τ are necessarily approximate quantities, and they represent complicated concepts. They cannot be fully defined or used unless the conditions under which they are measured are fully defined.

In particular, note that the dissipation of a thermistor is the sum of dissipation due to conduction, convection, and radiation, which are related to temperature by linear, square-law, and fourth-power equations respectively. Only over narrow temperature ranges can dissipation constant be considered constant.

Also note that time constant is defined by a zero-power cooling curve. If the thermistor is attached to a heat sink the effective time constant is changed substantially. The time required for a thermistor to reach equilibrium due to heating from a current passing through it may be dramatically different from the time constant as defined above.



THERMISTOR SPECIFICATION

Thermistors are most often specified by a zero power resistance, suitably toleranced, at some specified temperature (most often 25°C or 37.8°C), and by a temperature coefficient, also suitably toleranced. This is all that is required as an electrical specification. Additional specifications may result in double dimensioning and be unduly restrictive (and therefore costly) or ambiguous.

The zero power resistance of a thermistor should be read in a temperature controlled, agitated oil bath. Not only does the oil bath provide a more controllable constant temperature, but it also speeds the settling of the reading.

ROD THERMISTORS

Rod thermistors are manufactured by extruding and firing a suitable ceramic mixture. For a given type of thermistor, low-, medium-, or high-sensitivity, a number of mixtures are available: in general, a mixture yielding a higher resistivity product also yields a higher beta or temperature sensitivity.

Standard rod thermistors are shown in the following table. They have a resistance tolerance of ±10% at 25°C, and they are neither coated nor marked. Special rod thermistors may be ordered with intermediate resistance values, other resistance tolerances, other calibration temperatures, coating, marking, special lead preparation, etc. Parts without wire leads are also available.

DISC THERMISTORS

Disc thermistors are manufactured by pressing and firing a suitable ceramic mixture. Carborundum offers six standard mixtures of various resistivity and beta.

Standard disc thermistors are shown in the following table. They have a resistance tolerance of ±10% at 25°C, and they are neither coated nor marked. Special disc thermistors may be ordered with intermediate resistance values, other resistance tolerances, other calibration temperatures, coating, marking, special lead preparation, etc. Parts without wire leads are also available.

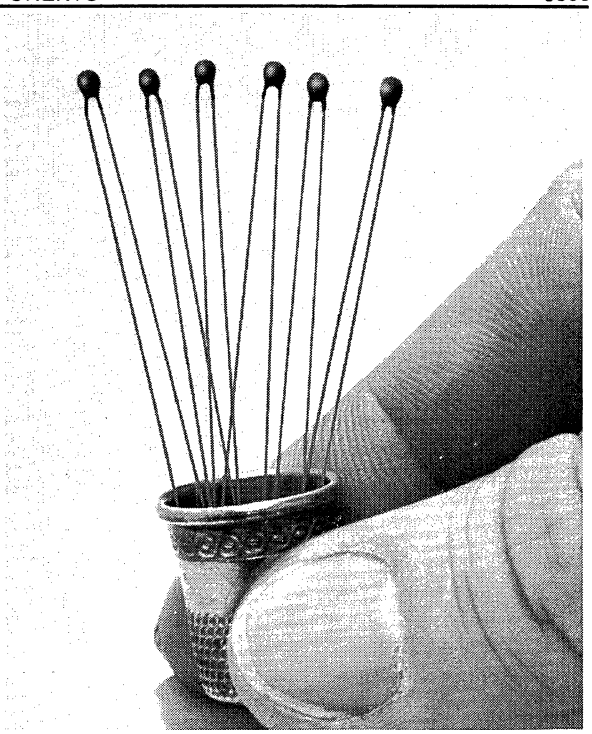
DALE® THERMISTORS

Interchangeable and Custom Negative Temperature Coefficient (NTC)



NTC Thermistors are the most sensitive temperature sensors known to exist for temperature measurement and control between −50°C and +150°C. Dale Thermistors are rugged, reliable, predictable and are easily assembled in small housings to meet a multitude of temperature measurement and control requirements. The effects of "noise", which may be a factor with other sensors, and conductor resistance resulting from the installation of thermistors in remote locations, has minimal effect on system accuracy.

Interchangeable Thermistors provide greater temperature measurement and control accuracy over wider temperature ranges. In addition, they allow the use of multiple thermistor sensors with a single readout or control system and save money by eliminating costly calibration procedures. Dale Thermistors are backed by more than a decade's experience in manufacturing smaller, low-cost NTC styles which are used in a variety of temperature measurement and control equipment worldwide.

Resistance values and tolerances. The following charts list "standard" thermistor resistance values and tolerances. Contact us for additional information and assistance in developing custom thermistors and sensor assemblies to meet your application requirements.

SPECIFICATIONS

Point-Matched Tolerance: NTC Thermistors may be ordered with a temperature or a resistance tolerance at a temperature point. Parts listed are specified at 25°C:

Ω TOLERANCE	TEMPERATURE TOLERANCE
±10%—no suffix	±1.0°C— -A
± 5%— -5	±0.5°C— -B
± 3%— -3	±0.2°C— -C
± 1%— -1	

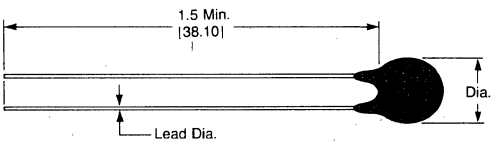
Interchangeable Tolerance: To simplify specification in ordering interchangeable Thermistors, they are specified to a temperature tolerance over a temperature range. The temperature tolerance corresponds to a resistance tolerance based on the temperature coefficient at each temperature point within the specified range (see definition of NTC).

INTERCHANGEABLE TOLERANCES AVAILABLE

	0° to 70°C	
TOLERANCE		SUFFIX
±1.0°C	—	A3
±0.5°C	—	B3
±0.2°C	—	C3

To specify, add the appropriate suffix to the part number selected from the "Most Specified NTC Thermistors" chart. *Example:* 1M1002-B3, Curve 1, 10KΩ @25°C, *interchangeable to* ±.5°C from 0° to 70°C. Asterisk (*) indicates ±0.2°C tolerance available for interchangeable thermistors.

R_{25} Values ±10% listed are typical. 40Ω to 40 megohm @ 25°C available. Add -5 for ±5%, -2 for ±2%, etc. to part number for closer tolerance at temperature T.



Leads: T series thermistors have Teflon insulated leads 3" [76.20] ± .25 [6.35]. All others are solid tinned copper 1.5 [38.10] ± .2 [5.08] long unless otherwise specified.

Coating: "Baked-on phenolic" for durability and improved long term stability. Other coatings are available.

Sensor Assemblies are designed to enhance applicability, protect and appropriately locate thermistors for maximum efficiency, whether used in liquids, solids or gases. They may be designed to meet the stringent requirements of automotive, energy, industrial, computer, aerospace, consumer appliance, medical and ecology related industries. "Standard" sensor-assemblies are available; however, most are manufactured to customer specifications. Contact our engineers for design assistance and quotations.

DEFINITIONS

$R_T \div R_{25}$ ratio is Resistance at temperature T divided by resistance at 25°C. To determine the resistance of a NTC thermistor at temperatures other than 25°C, multiply the ratio selected from the appropriate curve column above by resistance at 25°C, e.g., Curve 1, 10KΩ @ 25°C, 1256Ω @ 80°C. Call us for 1°C ratio tables.

NTC (−%/°C) is negative temperature coefficient of resistance at temperature (T) expressed in % resistance change per °C. Since one NTC resistance change is approximately equivalent to a 1°C temperature change, NTC is useful in developing Interchangeable thermistor specifications, e.g., Curve 1, 10,000Ω ± 4.4% @ 25°C, 32,660Ω ± 5.1% @ 0°C, 1751Ω ± 3.4% @ 70°C results in a ±1°C Interchangeable Thermistor 0° to 70°C, .5 NTC = ±.5°C, etc.

Maximum Temperature for thermistors listed is 150°C; however, continuous operation or cycling above 125°C, or above specified temperature range for Interchangeable thermistors, may cause thermistors to exceed originally specified tolerances.

MT±% is manufacturing tolerance at temperature. Add to resistance tolerance specified at 25°C, e.g., Curve 1 10K ± 10% @ 25°C, 1256Ω ± 12.1% @ 80°C. Not applicable to Interchangeable Thermistors.

Dissipation Constant (D.C.) is the amount of power, in milliwatts, which will raise the thermistor 1°C above its environment while suspended by its leads in still air at 25°C.

Time Constant (T.C.) is the time, in seconds, required for the thermistor dissipating zero power to change 63% of the difference between its initial temperature value and that of a new temperature environment, while supported by its leads in still air.

Thermistor Resistance Measurements must be made at precisely controlled temperature while applying essentially zero power to assure measurement accuracy.

SUB-MINIATURE SNAP-ACTION THERMOSTATS

Elmwood thermostats are precision-engineered for quick, reliable response in high limit or control applications. Many meet military specifications, as well as U.L., C.S.A. and European requirements. Exposures are from −65°F to +550°F, ratings to 15 Amps, with narrow or wide differentials as required. A variety of brackets and terminals are available, as well as custom packaging. Write or phone for complete catalog.

DIAL PROTOTYPE

For fast service on prototypes and thermocouples call our precision sales department at 401-781-6500.

DESCRIPTION	ELECTRICAL RESISTIVE RATINGS	INCLUDING TOL. SET POINT RANGE	NARROWEST TOLERANCE ALLOWABLE	NARROWEST DIFFERENTIAL AVAILABLE	AGENCY LISTINGS	TYPICAL APPLICATIONS
3100  Hermetically sealed, all welded construction long life, narrow or wide tolerances and differentials.	6 Amp 120 VAC 7 Amp 30 VDC/AC 3 Amp 240 VAC	−20° to 500°F −28.89° to 260°C	±3°F ±1.7°C	6°F max. 3.3°C max.	U.L.* C.S.A.	High-temp control for copy machines, computers, aircraft, electronic controls
3106  Similar to 3100 but with gold alloy cross-point contacts.	120 VAC 100 MA 50 VDC 500 MA	−20°F to 400°F −28.8°C to 204°C	±3°F ±1.7°C	6°F max. 3.3°C max.		Dry Circuit applications
3150  Hermetically sealed, all welded const. Similar to 3100 except low silhouette .301" max. design	6 Amp 120 VAC 6 Amp 30 VDC/AC 1.5 Amp 240 VAC	-20° to 350°F −28.89° to 177°C	±3°F ±1.7°C	6°F max. 3.3°C max.	U.L.*	Copy machines, computers, aircraft, electronic controls where space is critical.
3156  Similar to 3150 but with gold alloy cross-point contacts.	120 VAC 100 MA 50 VDC 500 MA	−20°F to 350°F −28.89°C to 177°C	±3°F ±1.7°C	6°F max. 3.3°C max.		Same as 3106 but where space is limited.
3305  Subminiature .430" dia., hermetically sealed, tolerances to ±3°F and narrow differentials.	2 Amp 120 VAC 1 Amp 30 VDC	125° to 250°F 52° to 121°C	±4°F ±2.2°C	6°F max. 3.3°C max.		Crystal ovens, gyros, electronics overheat protection where subminiature thermostat is required.
3000  Custom package housings.	Consult factory for Approvable Models	0°F to 400°F −18°C to 204°C	±4°F ±2.2°C	10°F max. 5.6°C max.	See other models	Aircraft bleed air duct sensing, hydraulic oil temp control, liquid bath control, heater control.
3001 Non-hermetic, utilizing 3100 design with phenolic and metal housing.	6 Amp 120 VAC 3 Amp 240 VAC	0° to 335°F −17.8° to 168.3°C	±4°F ±2.2°C	8°F max. 4.4°C max.	U.L.* C.S.A	Computers, copy machines, radar equipment, where low height .281" is required.
3004  Non-hermetic, utilizing 3100 design. Rivet insert sleeve construction for International listings.	8 Amp 120 VAC 4 Amp 250 VAC	0° to 335°F −17.8° to 168.3°C	±4°F ±2.2°C	8°F max. 4.4°C max.	U.L. C.S.A. BSI VDE	Similar to 3001, where increased European spacing is required.
3450 3455R  Non-hermetic, with 15 Amp 120 VAC rating. U.L. and C.S.A. listings for 100,000 cycles.	15 Amp 120 VAC 12 VDC* 10 Amp 240 VAC	32° to 335°F 0° to 168.3°C	±5°F ±3°C	20°F 11°C min. below set point.	U.L. C.S.A. International	Power supplies, communication, medical equipment, computers where high amp loads are present. 3455R is used where increased spacing and rivet construction for European requirements are needed.
3455RBV Epoxy overmold constr. of 3455R. For elec. insulation of terminal or moist conditions.	15 Amp 120 VAC 10 Amp 240 VAC	0° to 221°F −20° to 105°C	±5°F ±3°C	20°F 11°C min. below set point.	U.L. C.S.A. International	Similar to 3455R with epoxy overmold for protection of terminals and sealing of unit.
3450RC-3455RC  High temperature, with 15 Amp 120 VAC rating. Rivet insert sleeve construction for International listings.	15 Amp 120 VAC 12 VDC 10 Amp 277 VAC	32° to 500°F 0° to 260°C	±5°F ±3°C	20°F 11°C min. below set point.	U.L. C.S.A. International	Similar to above, where high temperatures are present.
3455RM Non-hermetic manual reset. Will not recycle automatically at room temperature.	15 Amp 120 VAC 10 Amp 240 VAC	125° to 300°F 52° to 149°C	±8°F ±5°C	Man. reset Auto. reset below 40°F 4.44°C	U.L. C.S.A. International	Where manual reset is required. 3455RM meets increased spacing for European requirements.

*These models are also available as U.L. Recognized Components. Please consult factory and specify Rating Required. Consult factory for C.S.A. listings.

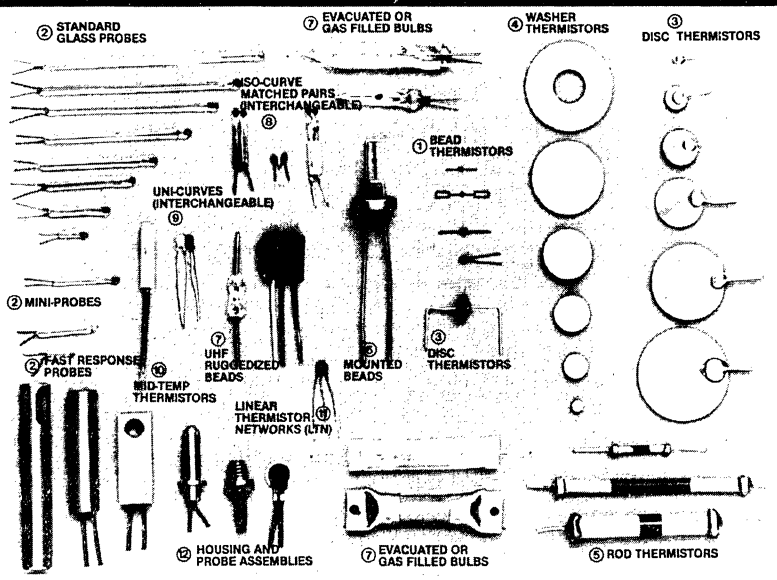
THERMISTORS

Fenwal® Electronics

BROADEST THERMISTOR LINE AVAILABLE ANYWHERE



THE MOST COMPLETE LINE OF PRECISION THERMISTORS

THERMISTOR CONFIGURATIONS

1. Glass Coated Beads — used where small size, fast response, high precision, stability, and temperatures to 300°C are required.

2. Glass Probes — medium-small in size. Many of the advantages of beads but rugged, more easily mounted, useful in liquid media.

3. Discs — used where medium power dissipation is a requirement and space not a problem. Useful to 150°C.

4. Washers — used where high power dissipation is a prime requirement.

5. Rods — these units have power dissipation intermediate between discs and washers and are also used where their physical shape is an asset.

6. Mounted Beads — provide ease in using glass beads in such applications as gas chromatography, flow and vacuum measurement, etc.

7. Vacuum and Gas Filled Assemblies — high power sensitivity for specialized circuit applications.

INTERCHANGEABLE THERMISTORS

8. Iso-Curve® Interchangeable Thermistors — these units available in bead or glass probe configurations, follow standard L-2B curves over wide temperature range, and are completely interchangeable. Units match standard curves as close as ± ¼% of resistance or as required. Bulletin L-2B.

9. Uni-Curve® Interchangeable Thermistors — completely interchangeable units having an accuracy of + 0.2%C over a temperature range of 0°C to 70°C and available on special order to other tolerances and ranges. Bulletin L-6B

MID-TEMP THERMISTORS

10. Mid-Temp Thermistors — Bead and probe thermistors designed for useage at the higher Mid-Temp range from 200°C to 600°C. Ask for bulletin L-10.

LINEAR THERMISTOR NETWORKS(LTN)

11. Linear Thermistor Networks (LTN™) — precision resistors and thermistors which are designed to produce a resistance change or voltage output that varies linearly with temperature over the selected temperature range. Ask for Bulletin L-9A.

THERMISTOR PROBES

12. Probe Assemblies — standard catalog types or built to specific military or commercial requirements. We are experienced in design of probe assemblies for all fields of application including industrial control and indication, aerospace — specializing in telemetry applications, and oceanographic — featuring fast response, very high pressure, and interchangeability using our Iso-Curve and Uni-Curve Thermistors. Ask for Catalog L-5A.

FREE...technical THERMISTOR LITERATURE

THERMISTOR MANUAL (EMC-6B) Most complete up-to-date listing of thermistors available. Theory, engineering data, complete specifications.

THERMISTOR HOUSING MANUAL (L-5A). Detailed information on how Fenwal Electronics can build thermistor sensor assemblies to fit your requirements.

THERMISTOR APPLICATION AND TECHNICAL DATA NOTES: "Designing Linear Temperature Read-Out Circuits" AN-1A; "Using Thermistors to Compensate for Transistor Temperature Sensitivity" AN-2A; "Stability & Reliability Characteristics" TD-1A; "Considerations in Testing of Thermistors" TD-2A.

LINEAR THERMISTOR NETWORKS (LTN™) precision resistors and thermistors which are designed to produce a resistance change or voltage output that varies linearly with temperature over the selected temperature range. Ask for Bulletin L-9A.

INTERCHANGEABLE THERMISTORS: ISO-CURVE manual (L-2B) and UNI-CURVE manual (L-6B) provide in-depth data pertaining to precision and low-cost RT, curve-matched interchangeable thermistors.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

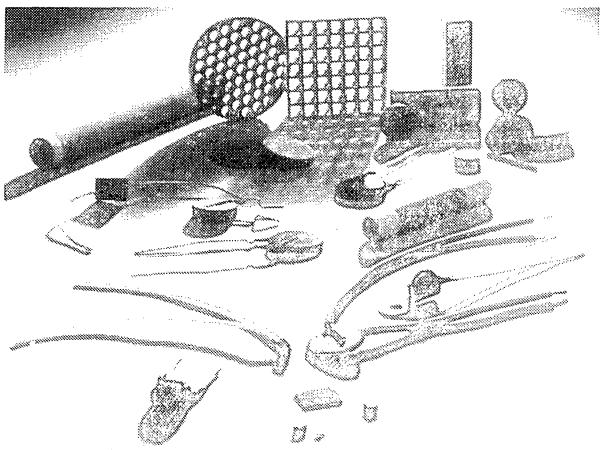
YIG yttrium iron garnet

SYLVANIA Control Devices **GTE** **THERMASTER™**

PTC's (Positive Temperature Coefficient Thermistors) To Heat, Sense and Control

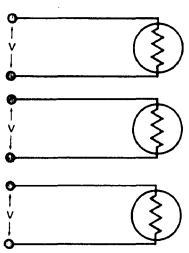
A versatile tool for design engineers

Whatever your product application, there will be problem areas where the unique characteristics of Thermaster™ PTC thermistors can provide a reliable and cost-effective solution. These versatile components can be used as self-regulating heaters, temperature sensors or control elements. Applications occur in all industries, including transportation, consumer products, office data processing equipment, industrial controls, instrumentation and communications. The advantages of Thermaster components include simplicity, solid-state reliability, versatility, stability, sensitivity and resolution. They are producible in a wide range of ratings and package styles. Isn't it time you looked into their capabilities? Ask for literature.



APPLICATIONS

HEATERS

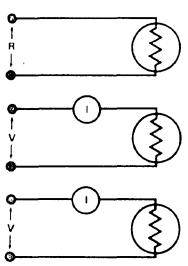


ADVANTAGES

- No overtemperature protection required
- Fixed temperature operation, wide range of temperatures producible
- Stable characteristics over wide voltage range

Cost Effective—The ability of the PTC thermistor to auto-stabilize over wide variety of operating temperature precludes the need for temperature regulators and/or over temperature protectors in most heater applications.
Producible in a number of shapes and packages for heating liquids, solids or gases.

SENSORS

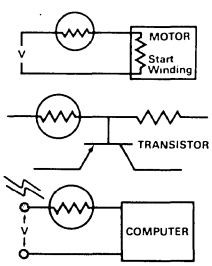


ADVANTAGES

- Small size
- Low power levels required
- Broad resistance range producible

Versatile—PTC's are offered in a wide range of switching temperatures and resistances for maximum design flexibility.
Producible with attached leads for PC board mounting; as discs for surface mounting; as chips for hybrids; and in various other shapes.

CONTROLLERS (Protectors)



ADVANTAGES

- No moving parts
- Small size
- Wide range of packages
- High reliability

Control PTC thermistors provide a simple means to protect loads against fault conditions; i.e.; voltage surges such as line crosses; undesireable temperature rises; or to protect circuits from excessive current.
They have no moving parts, are rugged, and are available in a number of sizes and resistance ranges for almost any application.

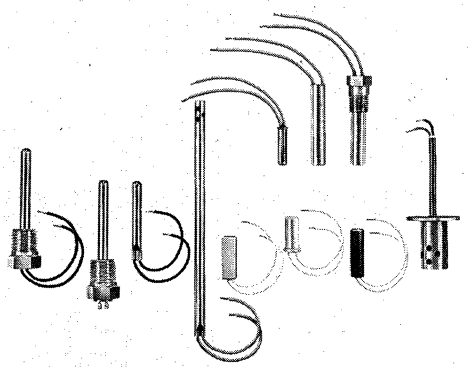
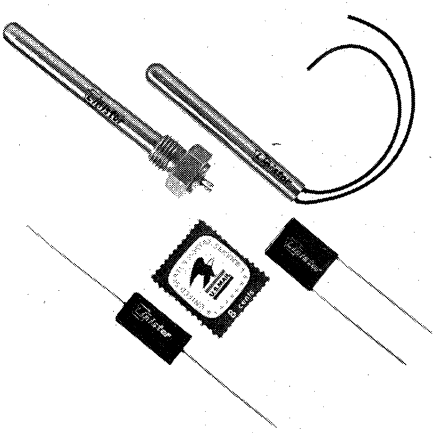
-G20 for Glass Bead Assemblies

THERMISTOR PROBES



The probes illustrated above include stainless steel, aluminum, and chrome-plated materials in a variety of configurations. In addition, a variety of other designs are available. These probes are used in conjunction with solid state circuitry for liquid level measurement, and for use as sensors to measure the temperature of liquids or surface temperatures. Write for probe catalog TP-739.

LINISTOR® ASSEMBLIES



Keystone developed Linistor assemblies to give an accurate resistance response over a temperature span of 0° to 100° C. Because Linistor assemblies have flattened out the thermistor resistance curve to a constant and predictable straight-line plot, they are valuable in a wide range of applications. Four standard encasements are available. Tolerance on resistance of Linistor is ± 2% at 25°C. Write for Linistor Bulletin L-601.

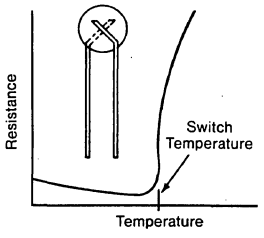
PTC—POSITIVE TEMPERATURE COEFFICIENT THERMISTORS



Positive Temperature Coefficient (PTC) thermistors are characterized by an extremely large resistance change in a small temperature span. The figure at left depicts a generalized resistance temperature plot for a PTC. The temperature at which the resistance begins to increase rapidly is referred to as the switching temperature. This point can be changed from below 0°C to above 120°C.

TYPICAL PTC APPLICATIONS

• Automatic Color TV Degaussing • Air Flow Measurement • Non-Destructive Fuse • Single Phase Motor Starting • Liquid Level Sensing • Combination Heater-Thermostat • Arc Suppression • Time Delay Fusing.

For detailed application notes, write for Bulletin P-780.

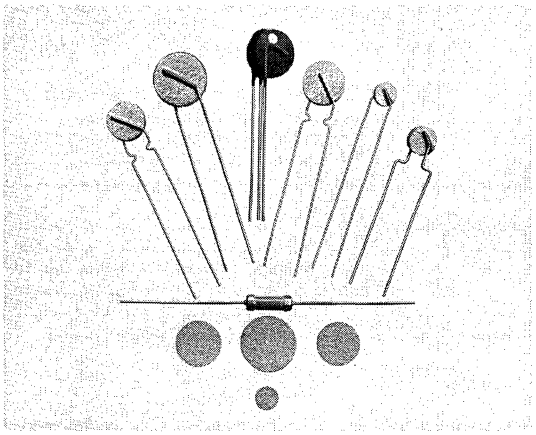
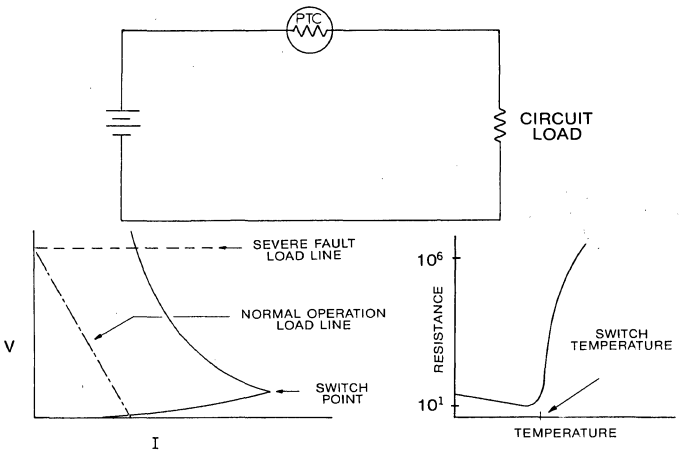
POPULAR PTC CIRCUIT APPLICATIONS



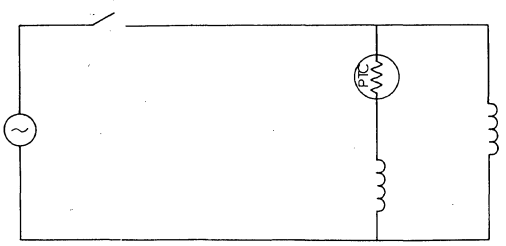
A large resistance change in a small temperature span best describes PTC thermistors. The temperature at which the resistance begins to increase rapidly is known as the "switching temperature." Because of this transformation, PTC's are an ideal component for circuits where the built-in switching temperature can be used to advantage. A few of the many applications are shown on this page.

NON-DESTRUCTIVE FUSE



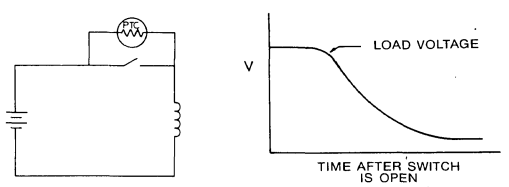
In normal operation the PTC dissipates minimal power keeping its body temperature well below the switch temperature. If a fault of sufficient magnitude occurs, additional power drives the temperature of the PTC up to the switch temperature. At this point additional power becomes available to the PTC, and the only stable operating point is at a much higher resistance than the switch temperature resistance as shown in the illustration above.

MOTOR STARTING



In the above circuit the PTC thermistor replaces the troublesome starting switch in a single-phase motor. When the circuit is energized the PTC has a low resistance and permits most of the line voltage to be applied to the starter winding. As the motor starts, the PTC heats up until the switch temperature is reached at a rate determined by the thermal inertia of the PTC and current flowing through the starting winding. At this point, the thermistor rapidly changes from a low resistance device to a high resistance unit, and the steady state power applied to the PTC is very low causing the current through the starting winding to be negligible.

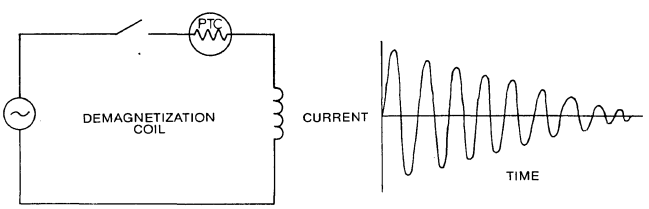
ARC SUPPRESSION



In the above illustrations the PTC switches from a low resistance to a high resistance when the switch is opened. The low resistance of the PTC provides effective arc suppression, and the subsequent PTC switching action transfers essentially all of the power supply voltage from the inductive load to the PTC element.

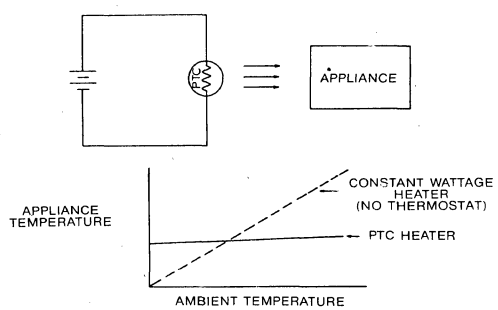
Write for PTC Bulletin P-780 and technical article "Heat switches the PTC Thermistor."

AUTOMATIC DEGAUSSING



When the switch on the above circuit is closed, a high percentage of the line voltage is impressed across the demagnetization coil. Within a short period of time, the PTC self-heats, switching from a low resistance level to a high resistance, and thereby decreasing the demagnetization coil current to near zero. The length of time for this switching action to occur is a function of the power applied to the PTC and its thermal inertia

COMBINATION HEATER-THERMOSTAT



PTC thermistors provide an economical method of temperature control by combining the function of the heater and thermostat in one ceramic pellet. This thermostatic action is accomplished by the steep PTC characteristic. As the ambient temperature rises, the resistance of the PTC is increased, thus reducing the input power to the circuit maintaining a relatively constant temperature.

PTC OVERTEMPERATURE PROTECTOR for TRANSISTORS

Positive Temperature Coefficient (PTC) thermistors — act as solid-state switches. They are conveniently wired into a circuit board to prevent destruction of a power transistor.

PTC's are bonded to a tab which is mechanically mounted to the power transistor package. The PTC thermistor measures the surface temperature of the transistor. When the temperature of the transistor case reaches a critical point, the PTC switches and turns off the drive circuitry for the transistor. This action prevents it destruction. Then, as the transistor cools, so does the thermistor, automatically resetting itself to once again guard the power transistor.

PTC SURFACE TEMPERATURE SENSORS

TYPE NUMBER	SWITCH TEMP. °C.	TYPE NUMBER	SWITCH TEMP. °C.
RL2006-100-30-30-PT1	30	RL2006-100-80-30-PT1	80

SPECIFICATIONS:

1. Resistance @ 25° C: 100Ω ± 30% (70Ω-130Ω).
2. Switch temperature per table is defined as temperature at which the measured resistance is two times the measured resistance @ 25° C.
3. Maximum voltage that can be applied to the device in DC or 60Hz sinusoidal wave form AC is 30 volts.
4. Maximum operating temperature 140° C.
5. Dielectric withstand between PTC element and aluminum tab is 50 VDC min.
6. Basic construction: .200" dia. x .060" thk. PTC disc with radial leads attached to an anodized aluminum tab.
7. Physical design — per Figure 1.
8. Optional resistance values, switch temperatures and physical designs are available upon request.

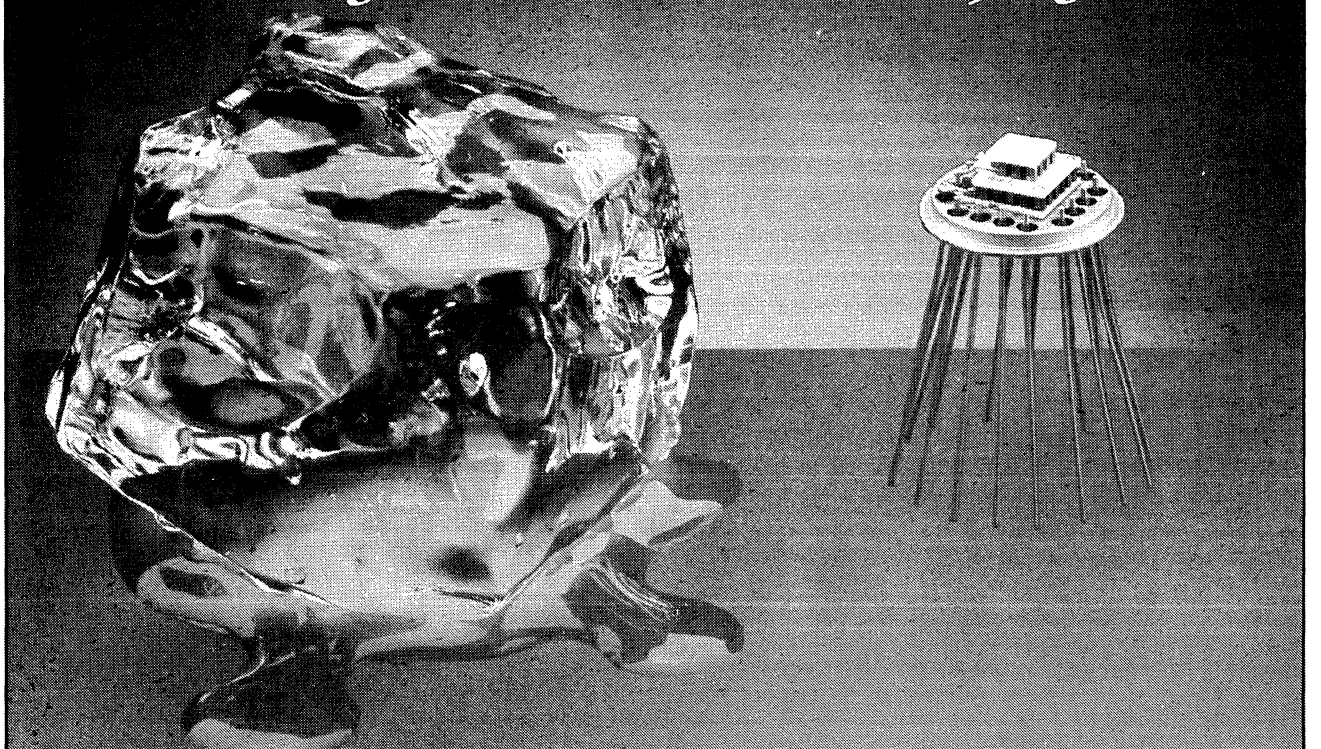
TEMPERATURE CONTROL 1883

TEMPERATURE CONTROL 1983



Temperature control has come a long way in the last century. Marlow Industries is the world leader in the design and manufacture of high-performance thermoelectric coolers. Through the years our innovative approach to thermoelectric technology has established our reputation for excellence with the aerospace, military and other industries. We have developed proven reliability criteria, through extensive testing, to meet the stringent requirements of this highly specialized market. Our experience covers a broad spectrum in the thermoelectric field, including:

- **Laser Diode Cooling**
- **CCD Cooling**
- **Fast Transient Cooling**
- **Infrared Detector Cooling**
- **Medical Instrumentation Cooling**
- **Consumer Product Cooling**
- **High Reliability Coolers**
- **Power Supply / Temperature Control**
- **Accessories (Flux, Solder, Grease, Epoxy, Sensors, Headers, etc.)**

Marlow Industries has made major contributions in these areas by working closely with our customers and their engineers to solve difficult application problems. Through this close cooperation our technical staff has assembled new data, information and specific application notes. We will be happy to share the accumulation of this information at your request.

Call or write Marlow Industries today and see how far thermoelectric technology has really come.

TEMPERATURE SENSING SWITCH

TEMPERATURE SENSING REED SWITCHES
PMS SERIES

Midwest Components, Inc. has now packaged the reliable temperature sensing reed switch in a convenient and easy to use housing. The molded plastic body offers the additional advantages of complete moisture and dust protection at an economical price.

This rugged switch can be quickly mounted with a screwdriver. An indentation on the housing also facilitates attachment by ordinary hose clamps or clip hardware supplied by the user. Type A (normally open) or Type B (normally closed) switches may be used in this new package.

TEMPERATURE SENSING REED SWITCH PROBES

Now Available . . .
The ultra reliable temperature sensing reed switch in a convenient probe assembly. Probe is designed for liquid temperature sensing on auto, truck, compressor, or equipment cooling systems. Rugged brass body is hermetically sealed against harsh environments. Switching temperatures are available from -10°C to 150°C. 3 million operations are possible at full rated load.

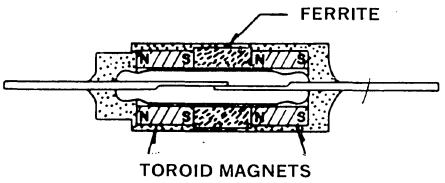
TEMPERATURE SENSING SWITCH

CONVENIENT AND RELIABLE TEMPERATURE CONTROL

Miniature temperature switches use an electro-ceramic element instead of a bimetallic switch. The Reed Switch Temperature Sensor works on these two principles: a reed switch actuation occurs because of changes in strength of a magnetic field in the vicinity of the contact gap; and certain materials exhibit great changes in magnetic reluctance when the temperature is varied in the vicinity of the material's curie temperature.



The unit has good response time, and is operable in a variety of atmospheres and solutions. Variations in configurations suitable for installation in automotive engine crankcases and automatic transmissions, or mountings for use in computer cabinets are possible. Other applications include oven over-heat alarms, corrosive liquid temperature control, food freezer thaw warning and cooling fan stop indication. This switch replaces many thermally actuated devices now used where increased life is required or protection of the switching contacts from adverse environments is deemed desirable.

EPOXY PACKAGED SWITCHES

Switches feature small size for fast response. Eopxy package resists most chemicals and is good for use up to 125°C. Standard units from 0°C to ±125°C are available in five degree nominal increments.

FREEZE SENSORS

The Solar Freeze Sensor, Catalog Number TS-5B1, was developed to provide controller activation before freezing conditions damage collector. This activation will then provide recirculation or drain down to protect system. To meet the needs of high temperature exposure, the switch is packaged to withstand 400°C. Switch has also found application as road surface freeze indicator, refrigerated van warning sensor and is widely used as a frost sensor in the agricultural industry.

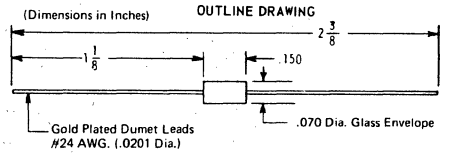
NTC THERMISTORS

• HIGH TEMPERATURE SENSORS

H-Series Hermetically Sealed Thermistors are small, rugged, and good for use up to 400°C. Uniform dimensions make them desirable for automatic insertion in printed circuit boards. Dumet leads are weldable and/or solderable.



• PRECISION H SERIES

Developed from our standard H-Series device is an ultra-precision sensor for applications needing tracking ability over a wide temperature range. Tighter tolerance assures less error and interchangeability from sensor to sensor. H-Series Hermetically Sealed Thermistors are small, rugged, and good for use up to 400°C. Gold plated Dumet leads are weldable and/or solderable.

• PRECISION INTERCHANGE PROBES

The stringent needs of the solar heating industry are met with M.C.I.'s precision sensor. This sensor provides an interchangeability of ±1°C or better. The sensor element can withstand continuous temperatures of 400°C without damage caused by high static conditions. Solder joints are eliminated in this probe to provide greater temperature exposure capabilities and increased reliability. Only teflon leads and insulation are used throughout the assembly making this device ready to mount in the manufacturer's probe housing or use as is.

• PLASTIC MOLDED SENSORS

The plastic molded sensor is designed for high accuracy, ease of assembly, and ruggedness. Its resistance changes with temperature to provide accurate inputs to electronic controls. Applications include energy management, solar, and industrial controls. Molded body resists extreme environments.

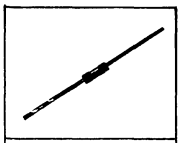
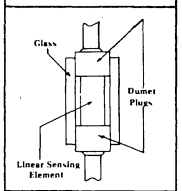
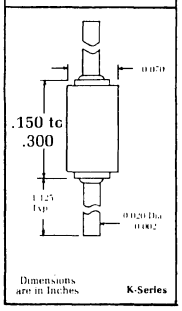
TEMPSISTOR

TEMPSISTOR© TEMPERATURE COMPENSATOR







The Tempsistor© is a temperature compensator designed to offset the temperature drift of metallic and silicon based semi-conductors. Applications include pressure transducers, opto amplifiers, inductive motor controllers, and automatic gain controls. Small size can replace 1/8 watt or larger resistors.

The Tempsistor© is available in resistances from 10 to 15,000 ohms at 25°C.

BEAD PROBES

Glass coated bead Thermistors feature SMALL SIZE, FAST RESPONSE, and improved HIGH-TEMPERATURE STABILITY. Leads are fired-in platinum-iridium. Bead probes, incorporating the bead in the tip of a glass probe, offer the additional advantages of more rugged construction in an easy to mount package which can be used in liquid media. Tinned Dumet leads are supplied on probes. The maximum operating temperature for beads and bead probes is 400°C.

SUPPRESSORS

INRUSH CURRENT SUPPRESSORS FOR SWITCHING POWER SUPPLIES.

Switching power supplies present high initial currents due to filter capacitor impedance upon turn-on. The use of Midwest's NTC (Negative Temperature Coefficient) devices limits this current to a low valve. After current flow their resistance becomes negligible and offers little voltage drop.

SPECIALTY CERAMICS

SELF REGULATING DISPLAY HEATER

The unique self-regulating heating effects of specially doped ceramics are utilized to create a new type heater for liquid crystal or other temperature sensitive displays. These devices produce heat at cold temperatures and curtail heating at normal or high temperatures. This feature allows its use in battery operated instruments due to low normal current drain. Use of this heater allows a broader application of displays by removing the adverse effects of temperature.

Heater is attached to reverse side of display with thermally conductive epoxies or silicone adhesives depending upon display's thermal coefficient of expansion or temperature to which it may be subjected. Actual performance of the display will depend upon manufacturers specifications.

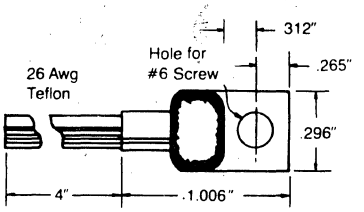
OVER TEMPERATURE PROTECTORS

MIDWEST COMPONENTS' Over Temperature Protector provides shutoff or regulation of expensive RF or AF Power Transistors. Protects against over heating that occurs from output stage component failure, antenna breakage, or short conditions.

Unlike fuses or bi-metal elements its action is recyclable and has no hysteresis effect.

Also available:
- Other switching temperature or resistances compatible with package constraints.
- Special lead types or end terminations.
- Body styles for protection of TRIAC or SCR Rectifiers.



Order Number	Switching Temp. (Nom.)	Resistance at 25°C (Ohms)	Resistance at Switching Temperature	Max. Cont. Oper. Temp.

OVER TEMPERATURE PROBE 9RT1P—SERIES

This rugged Probe is designed for over temperature sensing on compressors, engines, or fluid transfer lines. When over temperatures occur its resistance increases by a factor of five or more. This large increase allows simple interface with relay or Thyristor controls. Probe functions on AC or DC without regard for polarity. Stainless steel is used to minimize corrosion.

PTC SWITCHING THERMISTORS

THE POSITIVE WAY TO SENSE, MEASURE, CONTROL, REGULATE AND PROTECT.

MIDWEST COMPONENTS INC. PTC switching thermistors are thermally sensitive resistors which exhibit large positive increases in resistance with temperature. At customer specified temperatures the resistance rises abruptly from a low value to a high value. This resistance shift is infinitely repeatable and has no hysteresis associated with its action.

TYPICAL PTC RESISTANCE VS. TEMPERATURE CURVE

ALL LEADS TINNED COPPER 1" MINIMUM

• CURRENT LIMITERS

The ceramic element protects circuits from destructive overcurrent conditions by switching to a high resistance which trims the current back to a safe level. The unit then recovers automatically when the overcurrent condition is corrected.

The ceramic current limiter is an inexpensive alternative to fuses and fixed resistors. It has obvious advantages over all of these since it has infinite life, is self resetting which eliminates field servicing and will not "flame out" eliminating the fire hazard of fixed resistors.

Therm-O-Disc makes disc-powered temperature controls with the reliability you need

Therm-O-Disc has specialized in building reliable temperature controls since 1948. We are the leader in the industry. We lead in the design of controls to solve customer problems. We lead in the development of manufacturing processes to insure reliability. And, because we have rigid standards of excellence, we insist on 100% calibration checking of the bimetal discs, and 100% operation checking of the completed controls before shipping.

There is no need to take chances on temperature controls for your products when you can get Therm-O-Disc reliability at no extra cost. Ask us for technical bulletins with complete electrical ratings recognized by UL, CSA, and international testing agencies. Samples and quotations will be supplied on request.

HIGHLIGHT FEATURES

Impact Action: The bimetal disc of each control is factory calibrated at both the top and bottom temperatures. When the calibrated temperature is reached, the snap action of the disc impacts against the contacts thus giving high speed contact separation and long life.

Switch Actions: Automatic reset, manual reset, and single or "one-shot" operation.

Flexibility: There are many standard terminals and mounting brackets available. The 36TM and 63TM are designed for clamp mounting against a surface.

GENERAL RATING GUIDE & CALIBRATION CHARACTERISTICS

[100,000 Cycles]

Type & Max. Temp.	Resistive Amperes	Inductive FLA	Inductive LRA	Volts AC	Mean Differential Available	Standard* Mfg. Tolerance Top Set Point
36T Up to 350°F	13.75	5.8	34.8	120	15°F to 100°F	±5°F to ±12°F
	10.0	2.9	13.0	240		
63TM Up to 500°F	8.5	125 VA Pilot Duty		120	80°F to 100°F	± 25°F

*Manufacturing tolerances increase as the higher temperature calibrations and wider differentials are selected. For an extra charge, these tolerances can be reduced by approximately 30%.

Write, call or Telex for technical bulletins, samples and quotations.

THERMISTORS

OUR STANDARD COMPREHENSIVE LINE OF QUALITY, STABLE, LOW COST THERMISTORS AND THERMISTOR ASSEMBLIES ARE AVAILABLE FROM STOCK OR SHORT DELIVERY.

		DESCRIPTION	APPLICATION	BULLETIN
	BEADS	Glass coated beads from .005" dia. to .055" dia.	Temp. measurement & control. Gas analysis. Circuit compensation. Flow, microwave power, small size, fast response.	B1 B3 B5 B7 B9
	PROBES	Enclosed bead at tip of glass cylinder: .020" dia. to .100" dia.	Temp. measurement & control. Circuit compensation. Liquid level & flow. Rugged, easily mounted. Fast response.	C-1 C-3 C-7
	RODS	Ruggedized bead in glass rod: .060" to .100" dia.	General application where opposite lead ruggedized configuration is required.	C-5
	FLAKES	Thin Flakes: .020" x .020" x .001" to .120" x .120" x .004". Matched units on mounts.	IR measurement. Non-contact temp. meas. Intruder alarms. Microcircuit applications.	D-1 D-3 D-5
	ULTRA-FAST RESPONSE	Response times to 3 ms. Probes, insulated lead assemblies.	Where ultra-fast thermal response is required, in flow, temp. measurement. Catheter applications.	F-1
	HI-TEMP	.055" dia. beads & .060" to .100" dia. glass probes, using special matls. & processing.	Where operating temperatures of 450°C continuous are required.	E-1 E-3
	ASSEMBLIES	Large variety of special & standard housings.	Protected thermistor assemblies.	H-1 H-3 H-5
	TEMPERATURE STANDARDS	Precision temperature standards: 0°C to 60°C with calibrations every 0.01°C.	Laboratory & field temperature standards. OEM applications.	I-1 I-3
	ULTRA-STABLE THERMISTORS	Glass probes .060" to .100" dia. Interchangeable matched pairs. Guaranteed stability to 0.02% or 0.005°C/year.	Precision temp. measurement & control. Laboratory standards.	C-7
NEW!	THERMISTOR CHIPS	.050"x .050" to .100" x .100" sizes; bare and epoxy coated; broad tolerance or interchangeable.	General temperature measurement and control applications, low cost.

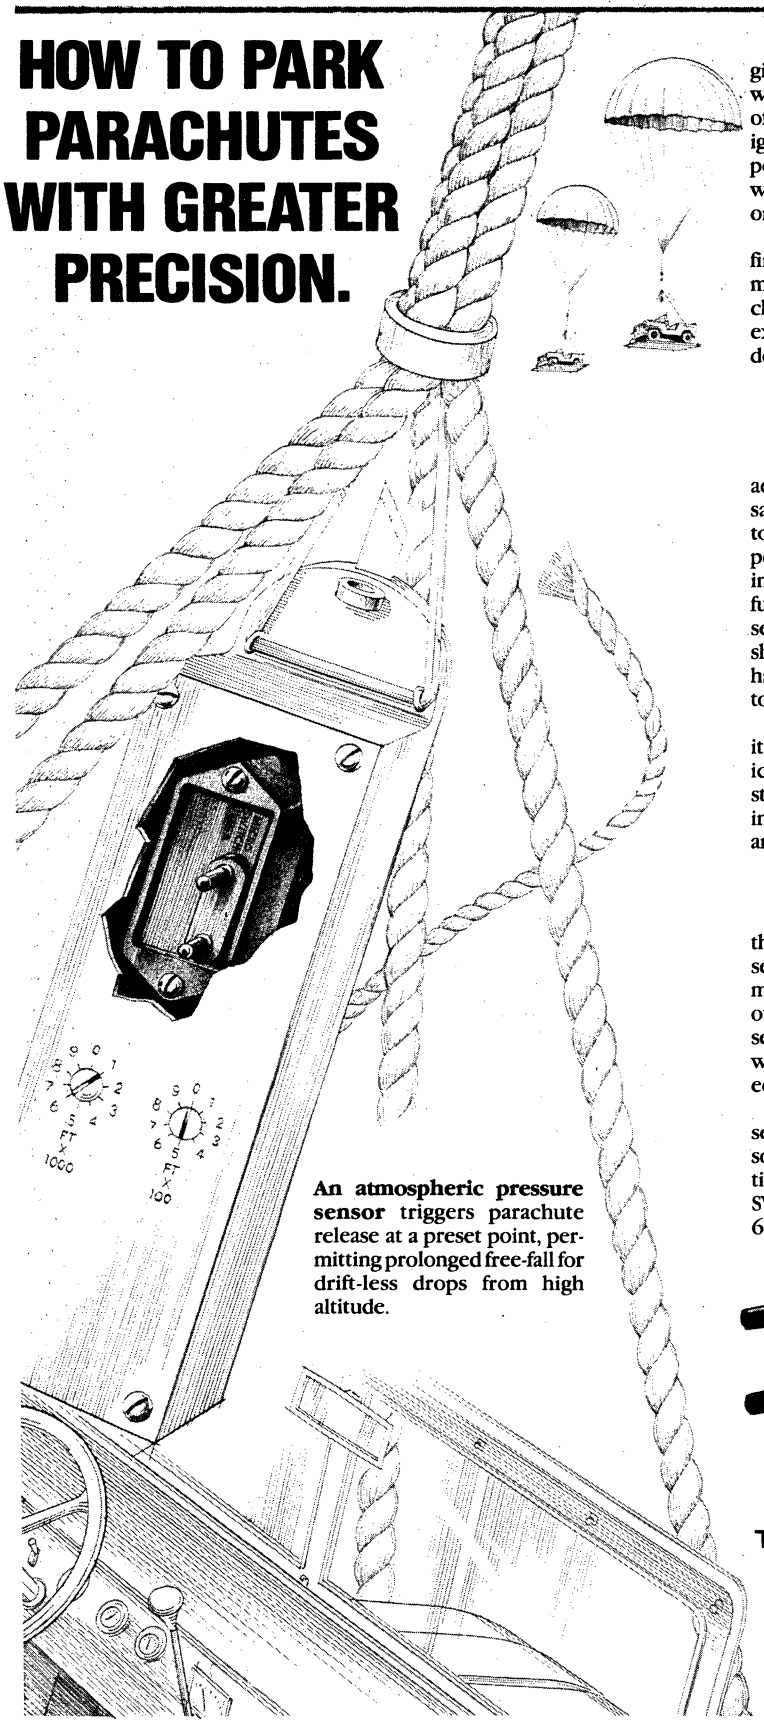
HOW TO PARK PARACHUTES WITH GREATER PRECISION.



An atmospheric pressure sensor triggers parachute release at a preset point, permitting prolonged free-fall for drift-less drops from high altitude.

High overhead, safely out of antiaircraft range, a giant transport scatters its payload of jeeps to the wind. But trapped in the elevator shaft trajectory of a 12,000-foot free-fall, the jettisoned cargo ignores the wind, and dives more than 600 feet per second. Locked into long, involuntary cartwheels, the jeeps plunge like meteors hell-bent on a rendezvous with ruin.

Now only 1500 feet above ground, the jeeps finally - suddenly - get a brake. Solid state sensors monitoring atmospheric pressure waken parachutes just in time. Drop accuracy is the result of extended free-fall and a reliable signal for chute deployment at desired altitude.

Rely on superior sensor performance.

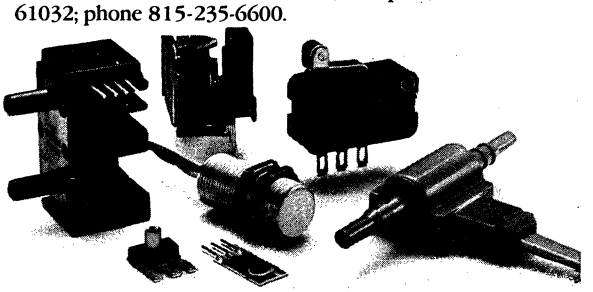
The altitude sentinel/deployment trigger for aerial cargo delivery is a Type 140PC sensor - the same product relied upon to monitor air pressure to pump the pioneer artificial heart. Blue-chip performance is due, in part, to a silicon chip sensing element with ion-implanted, instead of diffused, piezoresistors. And unlike other strain-sensitive sensors, this one shrugs off vibration and shock - as evidenced after a "no chute" dismount had left it implanted, but not diffused, in test-site topsoil.

Two-hour exposure at 50,000 feet doesn't faze it. Yet - despite withstanding thermal and mechanical stress per MIL-STD-810 - this sensor is stocked and priced for "commercial" application in automotive diagnostics, ventilation systems, and process control.

Tell us how we might help you.

Barometric pressure sensing is also a task for the temperature-compensated, 0-15 psia 140PC sensor in flight data "crash" recorders, and in military squib systems. But where price or size outweighs other considerations, the Type 130PC sensor is the popular choice ... as on one-shot weather balloons; portable, electronic surveying equipment; and desktop digital barometers.

We'd like to tell you more about our many sensors for measuring pressure, and about sensors for monitoring current, or signalling position. Just tell us how we can help. Contact MICRO SWITCH, The Sensor Consultants, Freeport, IL 61032; phone 815-235-6600.



Together, we can find the answers.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

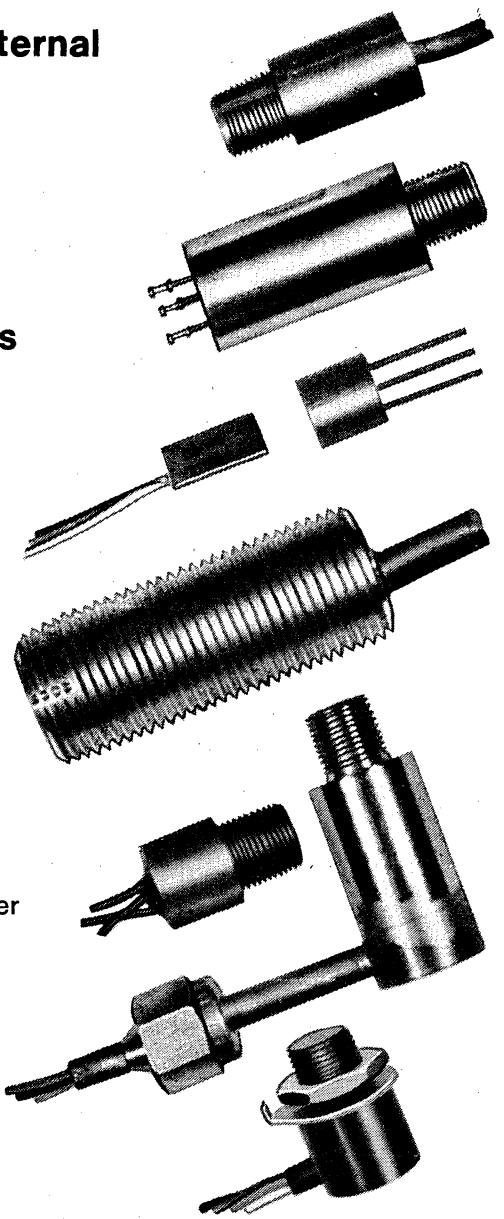
The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

Speed-Independent Magnetic Pick-ups

Their output voltage amplitudes are totally independent of the rate of change to the external magnetic field. They provide

- **True zero speed sensing**
- **Contactless limit switches**
- **Translational and rotational velocity, direction and position sensing**
- **Counting, indexing, and timing functions**



Benefits:

- Simplify designs
- Low power consumption
- Rugged enough for engine environments
- Aerospace reliability
- Operate from logic power bus
- Freedom from EMI (no choppers or oscillators)
- Freedom from actuator mechanisms
- Can replace optical systems

Applications:

Computer peripherals—sensing of indexing marks for drive mechanisms in card readers / magnetic tape memories / paper roll drive, and character selection in printers

Transportation—wheel speed sensing (skid-controlled braking) / ignition system timing / vehicle sensing (traffic control)

Industrial — speed, position and limit sensing

Aerospace — wide applications

Other Products:

Solid state Push Button and Toggle Switches / Solid state current sensors / as well as brushless DC Motors and Torquers.

BBN Accelerometers and Vibration Monitors help you study motion.

500 SERIES Piezoelectric Accelerometers with Internal Electronics

Eliminates Cable Noise effects, cable length limitation and costly charge amplifiers.
Operating Temperature Range: – 65°F to 250°F (– 54°C to 121°C)

Accelerometer Model	Sensitivity	Amplitude Linearity	Frequency Response ±3 dB points	Mounted Resonant Frequency	Weight
501, miniature, low mass, high frequency	10 mV/g±10%	±1% to ±212 g peak	2 to 40,000 Hz	65 kHz	1.8 grams
501ER, extended frequency response and dynamic range	2 mV/g±15%	1% to ±1,000 g's peak	0.3 to 45,000 Hz	85 kHz	2.0 grams
506, miniature, low mass, high frequency, isolated	10 mV/g±10%	±1% to ±212 g peak	2 to 33,000 Hz	55 kHz	2.0 grams
505, miniature, low mass, triaxial, high frequency	10 mV/g±10% per axis	±1% to ±212 g peak	2 to 25,000 Hz	45 kHz	10 grams
505-ISO, miniature, low mass, triaxial, high frequency, isolated	10 mV/g±10% per axis	±1% to ±212 g peak	2 to 16,000 Hz	38 kHz	11 grams
***507,** high sensitivity, low noise floor	100 mV/g±5%	±1% to ±21 g peak	2 to 12,000 Hz	26 kHz	39 grams
507HS, high sensitivity low noise floor	200 mV/g±10%	±1% to ±10 g peak	2 to 8,000 Hz	20 kHz	60 grams
***507LF,** extended low frequency response	10 mV/g±5%	±1% to ±210 g peak	0.2 to 12,000 Hz	26 kHz	39 grams
507T, triaxial, high sensitivity	100 mV/g±5% per axis	±1% to ±21 g peak	2 to 12,000 Hz	26 kHz	150 grams
507TLF, triaxial, extended low frequency	10 mV/g±5% per axis	±1% to ±210 g peak	0.2 to 10,000 Hz	20 kHz	150 grams
***508B,** general purpose	10 mV/g±5%	±1% to ±212 g peak	2 to 30,000 Hz	40 kHz	12 grams
508S, shock	0.1 mV/g±10%	±1% to 10,000 g peak	3 to 20,000 Hz	N/A	12 grams
510, very low frequency	8 V/g±20%	±1% to ±0.3 g peak	0.03 to 200 Hz (32°F to 150°F)	500 Hz	485 grams
524, industrial, high sensitivity, OEM	100 mV/g±5%	±1%to±25 g pk ±3%to±50 g pk	2 to 12,000 Hz	30 kHz	100 grams
524-ISO, industrial, high sensitivity, OEM, isolated	100 mV/g±5%	±1%to±25 g pk ±3%to±50 g pk	2 to 12,000 Hz	30 kHz	100 grams
524LF, industrial, extended low frequency, OEM	10 mV/g±5%	±1%to±250 g pk ±3%to±500 g pk	0.2 to 12,000 Hz	32 kHz	100 grams
524LF-ISO, industrial, extended low frequency, isolated, OEM	10 mV/g±5%	±1%to±250 g pk ±3%to±500 g pk	0.2 to 12,000 Hz	30 kHz	100 grams
524T, triaxial, high sensitivity, OEM	100 mV/g±5% per axis	±1%to±25 g pk ±3%to±50 g pk	2 to 12,000 Hz	30 kHz	348 grams
524T-ISO, triaxial, high sensitivity, OEM, isolated	100 mV/g±5% per axis	±1%to±25 g pk ±3%to±50 g pk	2 to 12,000	30 kHz	348 grams
524TLF, triaxial, extended low frequency, OEM	10 mV/g±5% per axis	±1%to±250 g pk ±3%to±500 g pk	0.2 to 12,000 Hz	32 kHz	348 grams
524TLF-ISO, triaxial, extended low frequency, isolated, OEM	10 mV/g±5% per axis	±1%to±250 g pk ±3%to±500 g pk	0.2 to 12,000 Hz	30 kHz	348 grams
525, very high stability	25 mV/g±5%	±1% to±84 g pk	2 to 14,000 Hz	28 kHz	40 grams
525-ISO, very high stability, isolated	25 mV/g±5%	±1%to±84 g pk	2 to 14,000 Hz	28 kHz	40 grams
557, underwater	10 mV/g±10%	±1%to±212 g peak	0.3 to 6,000 Hz	20 kHz	175 grams
557-ISO, underwater, isolated	10 mV/g±10%	±1%to±212 g peak	0.3 to 6,000 Hz	20 kHz	175 grams
558, underwater, all-weather	10 mV/g±10%	±1%to±212 g peak	3 to 14,000 Hz	25 kHz	50 grams
559, underwater, biaxial	10 mV/g±10% each axis	±1%to±212 g peak	1 to 5,000 Hz	30 kHz	30 grams
559-ISO, underwater, biaxial, isolated	10 mV/g±10% each axis	±1%to±212 g peak	1 to 5,000 Hz	30 kHz	30 grams

***Option 01 provides a top mount connector**
Dynamic Output Impedance (at 70°F and 100 Hz), nominal: 1,500Ω
Noise Floor (max.): 20 μV **Equivalent g rms (max.) at 1 Hz to 25 kHz:** 0.0002 to 0.0020 g rms (0.000005 g rms 510 only)
Power Supplies: BBN Models **P-16, P-18, P-20, P-1018** and **P-1020** - 0.5mA Constant current, 1.5V rms maximum output; BBN Models **P-18/4** and **P-1018/4** - 4.0 mA constant current, 3.5 V rms maximum output.

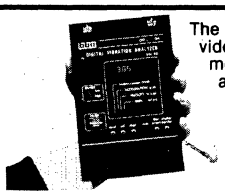
Use BBN piezoelectric accelerometers for the most accurate measurement of random or repetitive vibration phenomena. BBN manufactures a complete line of accelerometers with internal electronics to provide freedom from cable noise, cable length limitations and the need for costly charge amplifiers. High temperature, charge coupled accelerometers are available for operating in temperatures up to 750°F (400°C). Low-cost single and multi-channel power supplies and charge amplifiers provide an interface to display, recording and signal analysis devices.

400 SERIES Medium and High Temperature Piezoelectric Accelerometers

Operating Temperature Range: – 65°F to 750°F (– 54°C to 400°C) — 430 Series
– 65°F to 550°F (– 54°C to 288°C) — 420 Series

Accelerometer	Sensitivity	Amplitude Linearity	Frequency Response ±3 dB	Typical Resonant Frequency	Output Capacitance	Weight
424, medium temperature, high sensitivity	100 pC/g±10%	±1% to ±100 g's peak	0.7 to 11,000 Hz**	27 kHz	1000 pf	100 grams
424-ISO, isolated, medium temperature, high sensitivity	100 pC/g±10%	±1% to ±100 g's peak	0.7 to 10,000 Hz**	25 kHz	1000 pf	100 grams
426, medium temperature, high frequency	20 pC/g±10%	±1% to 50 g's peak	0.3 to 20,000 Hz** @70°F 10 to 20,000 Hz** @500°F	45 kHz	2000 pf	15 grams
426-ISO, isolated, medium temperature, high frequency	20 pC/g±10%	±1% to 50 g's peak	0.3 to 17,000 Hz** @70°F 10 to 17,000 Hz** @500°F	45 kHz	2000 pf	15 grams
430, nuclear hardened, high temperature	10 ±1 pC/g	±1% to ±100 g's peak	5 to 10,000 Hz (±1 dB)	27 kHz	1300 pf	75 grams
430-ISO, isolated, nuclear hardened, high temperature	10 ±1 pC/g	±1% to ±100 g's peak	2 to 8,000 Hz (±1 dB)	23 kHz	1300 pf	100 grams
431-ISO, isolated, nuclear hardened, high sensitivity	50 ±1 pC/g	±1% to ±100 g's peak	1 to 2,000 Hz (±1dB)	5 kHz	1500 pf	125 grams
432-ISO, isolated, nuclear hardened, high frequency	10 ±1 pC/g	±1% to ±100 g's peak	1 to 10,000 Hz (±1 dB)	25 kHz	500 pf	125 grams

****When used with BBN Model Q-18 or Q-1020 charge amplifier**



The 800 Series Digital Vibration Analyzer provides simple, inexpensive and accurate monitoring of rotating or reciprocating apparatus, machinery unbalance and laboratory test systems. The 800 Series measures and displays acceleration, velocity and displacement in English or Metric engineering units and has a family of plug-in filter modules which permit the selection of various frequencies for study. It interfaces with accelerometers which operate from – 65°F to 750°F (– 54°C to 400°C).

800 SERIES Digital Vibration Analyzers

MODEL 821			
OPERATING MODES	**ACCELERATION**	**VELOCITY**	**DISPLACEMENT**

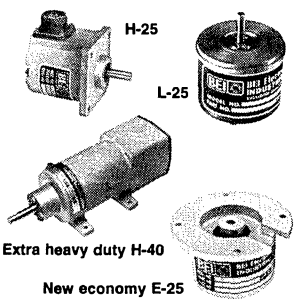
WHEN THE QUESTION IS MOTION CONTROL, THE ANSWER IS BEI

Call the division that matches your application.



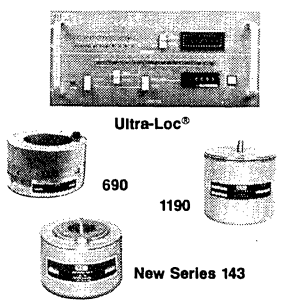
Our INDUSTRIAL ENCODER DIVISION guarantees 30-day delivery on standard model encoders with over 125 resolutions in stock from 1 to 50,000 CPT *incremental:* a wide choice of mechanical and electrical options.

Designed for the abusive machine tool environment. Rugged cast housing, heavy duty shaft and bearings. Available sealed against liquid entry and for shaft loads up to 200 lbs. and 200G shocks.

TYPICAL APPLICATIONS: Incremental machine tool, process control, instrumentation, incremental motion computer peripheral.

FOR FAST, LOW OEM PRICE QUOTES CALL OUR APPLICATIONS ENGINEERS.

INDUSTRIAL ENCODER DIVISION
7230 Hollister Ave.
Goleta, CA 93117
805-968-0782



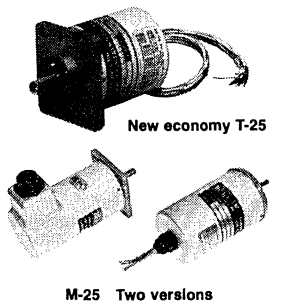
Our DIGITAL PRODUCTS DIVISION offers a wide choice of high accuracy optical rotary, *absolute, incremental* and *tachometer* encoders. Standard resolutions to 1,048,576 bits-per-turn. Special resolutions to 16,777,216 (2^{24}) bits per turn.

Also Ultra-Loc® direct drive programmable rate and position digital control servo system.

TYPICAL APPLICATIONS: Space rated, military high reliability, precision servo systems, pointing and tracking.

FOR ASSISTANCE WITH CUSTOM MILITARY, AEROSPACE AND SPECIAL APPLICATIONS, CONTACT:

DIGITAL PRODUCTS DIVISION
P. O. Box 3838
Little Rock, AR 72203
501-851-4000



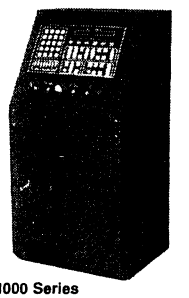
Our POSITION CONTROLS DIVISION offers fast 30-day delivery on optical *absolute* encoders using the latest aerospace technologies in the range of 512 to 65,536 bits per turn in a convenient size 25 package.

Features include single light source, heavy duty shaft, housings and bearing assemblies, wide range of output driver options and mounting configurations.

TYPICAL APPLICATIONS: Robotic measurement, drive system components, process control, absolute machine tool, absolute pointing and tracking.

FOR LOW INDUSTRIAL PRICES CONTACT:

POSITION CONTROLS DIVISION
819 Reddick Ave.
Santa Barbara, CA 93103
805-966-1538



Our new GENERAL CONTROL SYSTEMS DIVISION offers end users an extremely cost-efficient turn-key programmable electronic motion control drive system for industrial automation applications.

The GC-1000 series is a modular low-cost system that can synchronize up to 16 axes of simultaneous motion and functions from one control panel. Standard drive system capability: ¼-5 HP. Optional: 7¼-300 HP.

TYPICAL APPLICATIONS: Webb process industries, winding processes, robotics with passthrough and contour path requirements, multi-axes machine tool, assembly, packaging equipment and transfer lines.

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

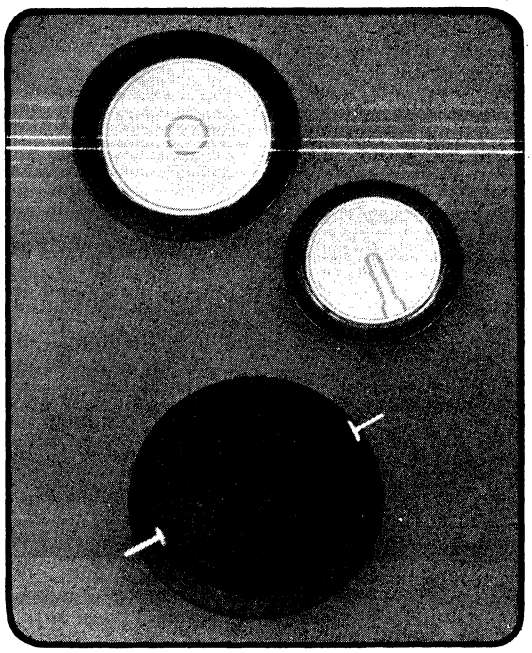
VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet



BLATEK AUDIO TRANSDUCERS

Blatek piezo ceramic audio transducers are available in three standard sizes, with or without feedback tab. All units can be provided with soldered-on lead wires at additional charge. Units requiring a stud mount or other special treatment will be quoted upon request.

MODEL	O.D.	RES. FREQ. (KHz)
6010 (6013)*	1.062″	4.8 ± 500
6020 (6023)	1.250″	3.5 ± 600
6030 (6033)	1.375″	3.0 ± 600

*Units in parenthesis designates feedback pattern. Special electrode patterns and frequency requirements quoted upon request. Small quantities from stock. Minimum order 30 pieces.

BLATEK SPECIAL PRODUCTS

Blatek provides specific customer design assistance and/or assembles special products for companies that do not have in-house capability.

Some other special product lines include:
—HIGH VOLTAGE CERAMIC CAPACITORS
—MEDICAL TRANSDUCERS AND SUBASSEMBLIES
—SMALL MILITARY PARTS ASSEMBLIES
—PIEZO CERAMIC BIMORPHS
—UNDERWATER DEPTH INDEPENDENT HYDROPHONES (MIL STD 1376)
—CUSTOM DESIGN AND SUB-ASSEMBLY WORK OF YOUR COMPANY'S PRODUCT OR SYSTEM

For an estimate on a specific design or project, submit a complete set of prints, drawings, or tentative application of product.

Confidentiality of proprietary project guaranteed. Customer references furnished upon request.

BLATEK INDUSTRIES, INC.
P.O. Box 574, Dept. 12
Pine Street & Mill Road
Bellefonte, PA 16823
814-355-4910

BLATEK AIR TRANSDUCERS

Blatek ultrasonic air transducers are designed for applications requiring a low or medium power 25 or 40 KHz transducer.

Both units have painted aluminum housings. Model 8010 is available with PC pins or phono plug. Model 8020 is available with PC pins or wire lead attachments. Small quantities from stock. Minimum order 5 pieces.

MODEL	DIMENSIONS	BANDWIDTH	POWER RATING	CAPACITANCE
8010-25KHz	1.0″ × .562″	.4 KHz	.2 watts	1500 pf
8010-40KHz	1.0″ × .562″	.4 KHz	.2 watts	1600 pf

celesco POSITION TRANSDUCERS

	Model	Ranges	Resolution	Accuracy	Thermal Effects (Zero)	Thermal Effects (Span)
	PT101 Position/ Displacement Transducer: Provides an electrical signal proportional to the linear extension of a stainless cable through the use of a precision potentiometer.	0-2 inches to 0-500 inches	essentially infinitesimal (most ranges)	±0.1% full scale (linearity and repeatability)	0.01%/°F full scale	0.01%/°F
	VT201 Velocity Transducer: Generates a DC signal proportional to the velocity of cable extension or retraction.	0-2 inches to 0-500 inches	essentially infinitesimal	±3%, linear to 0.1%	not applicable	0.01%/°F
	**DV301 Position/ Velocity Transducer:** Combines linear tachometer with potentiometer, offering both displacement and velocity outputs.	0-2 inches to 0-500 inches	position and velocity: essentially infinitesimal (most ranges)	position: ±0.1% full scale (linearity and repeatability) velocity: ±3% linear to 0.1%	position:0.01%/°F full scale velocity: not applicable	position: 0.01%/°F velocity: 0.01%/°F
	**PT420 Position Transmitter:** Combines a position transducer with two-wire 4-20 ma electronics. Operates from 12-45 VDC across input.	0-2 inches to 0-500 inches	essentially infinitesimal (most ranges)	±0.15% full scale (linearity and repeatability)	±0.015%/°F full scale	±0.015%/°F
	**Model PT801 Underwater Transducer:** A position/displacement transducer useful in underwater or extremely hostile environments. Available in stainless steel or anodized aluminum.	0-2 inches to 0-150 inches	essentially infinitesimal (most ranges)	±0.1% full scale (linearity and repeatability)	0.01%/°F full scale	0.01%/°F

celesco PRESSURE TRANSDUCERS

Piezoelectric Pressure Transducers

	Model	Sensitivity	Sensitivity	Charge Sensitivity	Capacitance	Maximum Pressure	Rise Time
	**LC-33 Blast Pressure Transducer:** High sensitivity; records a variety of dynamic pressure phenomena commonly found in free-field blast measurements, shock tunnel pressure-time profiles. Miniaturized LC-13 version available.	0.67V/psi	−101 db re 1V/μ bar	3000 pc/psi	4500 pf	500 psi	10 μ sec
	**LD-25 Blast Pressure Transducer:** Flush-mounted economy model for various measurements of dynamic pressure, acoustic phenomena; useful for high-pressure transients, low-level acoustics.	0.15V/psi	−113 db re 1V/μ bar	35 pc/psi	240 pf	3000 psi	1 μ sec
	**LC-70 and LC-71 Pressure Transducers:** Small, highly sensitive flush-mounted transducers for recording a variety of dynamic pressure and acoustic phenomena.	0.15V/psi	−113 db re 1V/μ bar	120 pc/psi	800 pf	300 psi	4 μ sec

celesco PRESSURE TRANSDUCERS

Variable Reluctance Pressure Transducers

	Model	Ranges	Linearity	Maximum Line Pressure	Over-pressure	Working Fluids	Output
	**P1 Pressure Transducer:** Operates reliably under adverse environmental conditions; ideal for aircraft/missile flight, ground-test applications. Compatible with most carrier systems.	±0.1 to ±1000 psi gage, absolute or differential	0.5% full scale, best straight line	2000 psi	200% of range in either direction	liquids and gases, both sides	25mv/V nominal full scale at 3000 Hz
	**P2 Pressure Transducer:** Highly shock resistant; ideally suited for corrosive media and accidental pressure overloads in water and hydraulic systems. Can be disassembled for field cleaning.	0-200 to 0-10,000 psi, gage or absolute	±0.5% full scale, best straight line	not applicable	200% of range or 12,000 psi, whichever is less	liquids, gases and solid suspensions	25mv/V nominal full scale at 3000 Hz
	P3D Differential Pressure Transducer: For precise measurement of low differential pressure at high line pressures; insensitive to shock and vibration, and suitable for corrosive fluids.	±0.1 to ±5000 psi, gage or differential	±0.5% full scale, best straight line	5000 psi	200% of range of 7500 psi, whichever is less (either direction)	liquids and gases, both sides	25mv/V nominal full scale at 3000 Hz
	**P7D Differential Pressure Transducer:** Ideal for low- and medium-pressure measurements of laboratory accuracy. Commonly used in aircraft and missile flight and in ground test and control applications.	±0.1 to ±500 psi, gage or differential	±0.5% full scale, best straight line	1000 psi	200% of range in either direction	liquids and gases, both sides	25mv/V nominal full scale at 3000 Hz
	**KP15 Pressure Transducer Kit:** Perfect for general laboratory use. Kit includes case, wrenches spare seals, accessories and diaphragms for five different ranges.	±1, ±5, ±25, ±100 and ±500 psi, gage or differential	±0.5% full scale, best straight line	2000 psi	200% of range in either direction	liquids and gases, both sides	25mv/V nominal full scale at 3000 Hz
	**P90D Differential Pressure Transducer:** Measures very low pressure differences at line pressures to 1000 psi. Has low acceleration sensitivity and wide dynamic response.	±1 in. H_2O differential (.036 psi)	±0.5% full scale, best straight line	vacuum to 1000 psi	±15 psid, with less than 0.5% full scale shift	liquids and gases, both sides	25mv/V nominal full scale at 3000 Hz
	**CP51 Pressure Transducer–DC Output:** Combines a variable reluctance pressure transducer and carrier demodulator in a single package. Operates from 28 VDC or 115 VAC (optional).	±0.1 to ±1000 psi, gage, absolute or differential	±0.5% full scale, best straight line	2000 psi	200% of range in either direction	liquids and gases, both sides	0-5 VDC or ±5 VDC full scale
	**LCVR Low Cost Differential Pressure Transducer:** Designed to fill the need for a low-cost, ultra-low range, lightweight transducer for medical and industrial markets.	0-2 cm H_2O to 0-1000 cm H_2O gage or differential	±0.5% full scale, best straight line	30 psia	300% of range with less than 1% full scale zero shift	air, oxygen, CO_2 or any inert gas	25mv/V nominal at 4000 Hz

Strain Gage Pressure Transducers

	Model	Ranges	Accuracy	Resolution	Overpressure	Working Fluids	Output
	**PLC Pressure Transducer:** General purpose transducer. Low-cost, accurate, rugged, compact. Weather resistant and temperature-compensated.	0-15 to 0-10,000 psi gage or absolute	±0.5% full scale (linearity, hysteresis and repeatability)	infinitesimal	200% of range	liquids and gases compatible with 17-4 pH stainless steel	10mv/V ±1%, zero balance ±1% full scale
	P2805 Pressure Transmitter: Ideal for most fluids or gases, for hydraulic and pneumatic systems, automotive and aircraft instrumentation. 5 VDC output. 19-32 VDC input.	0-15 to 0-5000 psi gage or absolute	±0.5% full scale (linearity, hysteresis and repeatability)	infinitesimal	200% of range	liquids and gases compatible with 17-4 pH stainless steel and Viton O-ring	0-5 VDC (0-10 VDC optional)
	Model P4420 Pressure Transmitter: Similar to P2805 except offers 4-20 ma, two-wire output. Compatible with a wide range of electronic receiving, readout equipment. Transmitter requires 12-45 VDC input.	0-15 to 0-5000 psi gage or absolute	±0.75% full scale (linearity, hysteresis and repeatability)	infinitesimal	200% of range	liquids and gases compatible with 17-4 pH stainless steel and Viton O-ring	two-wire, 4-20 ma

Supporting electronics available for display and signal conditioning. Contact factory for engineering assistance.

hcc INDUSTRIES

PRESSURE TRANSDUCERS (617) 861-7450

Features

- Pressure ranges: 0–5 to 20,000 PSI
- Output: voltage, frequency or current
- Unique stainless steel case-diaphragm compatible with most corrosive measurand
- Full calibration and temperature compensation
- Unit to unit interchangeability ±1%
- > 160 million full pressure cycles
- Rugged construction for long-term reliability
- Rated intrinsically safe

Options

Various optional operating characteristics and mechanical features can be incorporated in Data Instruments' pressure transducers at additional costs. These are designated by a numerical code.

1. Absolute pressure version. Available in 15, 25 and 50 PSIA.
2. Improved zero and span temperature compensation to 1%/100°F (55.5°C) and improved accuracy (combined non-linearity, hysteresis and repeatability) from 1% to 0.5%.
3. Barbed fitting for attaching protective hose around cable. (Model AB only)
4. Install longer cable by splicing to existing 3 ft cable.
5. Install longer continuous cable.
6. Install Bendix PTIH-10-6P electrical connector with an extended case.
7. Extended Operating Temperature Range to 300°F (148.9°C) 6 and 15 PSI excluded. Includes Option 6.

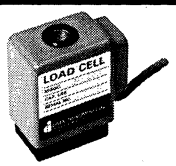
Options Available	1, 2, 3, 4, 5, 6, 7		1, 2	1, 2	1, 2	2

*Series E may contain AB, BF or BL transducers. Consult chart for specifications.
Case material: 316L stainless steel for ranges 50 PSI and under. 15-5 PH stainless steel for ranges 100 PSI and over.

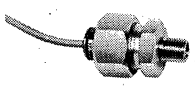
Load Cells



Features

Load ranges 0±10 lbs. to 0±2,000 lbs.
Universal loading, tension and compression
High output voltage
Small size
Low mechanical deflection
High accuracy

Adapters for Pressure Transducers



Various adapters are available.
These adapters are simple two-piece fittings which house the transducer. They not only interface with the working system but also shield the transducer from the mechanical environment.

Transducer Instrumentation

Series 100 and 200 Signal Conditioners and Controllers

Series 100 signal conditioners and Series 200 controllers interface strain gage pressure transducers, load cells, or transmitters with indicators, recorders, controls or alarms. Available in several models, the units provide excitation and signal amplification for almost any strain gage transducer.

Model DA Data Acquisition System

The DA Data Acquisition System is a multichannel signal conditioner with switching functions and a digital indicator. The standard system accommodates from four to ten Data Instruments signal conditioners which provide signals for the digital indicator, and an auxiliary output signal to drive remote indicators, recorders, controls, and computers. The system's flexibility allows the substitution of Data Instruments controllers for the signal conditioners (consult Factory for Model DAC).

Model RS and RB Meter Indicators

Model RS and Model RB are versatile indicators which combine a Model 100 signal conditioner or a Model 200 controller with a digital readout into a compact unit. They include transducer excitation supply, zero and span adjustment provisions, and analog output voltage signal.

Pressure Transducer Power Supplies

Models FVP-1 and FVP-2 provide a regulated 5 Vdc excitation signal for pressure transducers. The Model FVP-d provides a summing network for two transducers to perform differential pressure measurements using two standard Model AB transducers.

OPTICAL SHAFT ENCODERS AND PROGRAMMABLE LIMIT SWITCHES

INCREMENTAL ENCODERS

	Pulses Per Rev.	Input Voltage (VDC)	Output Formats	Frequency Range (KHZ)	Shaft Dia. (Inches)	Outline Dimensions (Inches)	Features
Tru-Rota Instrumentation Encoder	10 to 1270	5 to 15	TTL, HTL, CMOS, sine wave	0 to 50	¼	2¼ DIA. x 1½ L	General purpose encoder with high output voltage capability. 10 to 1270 pulses per revolution; 3 to 15 VDC (light source) and 4.5 to 30 VDC (electronics) input voltage; square wave or amplified sine wave output; 0 to 50 kHz frequency range.
LC-23 Low Cost Encoder	30 to 1270	5 to 12	TTL, CMOS, sine wave, line driver	0 to 50	¼	2¼ DIA. x 1⅞ L	Very low cost, convenient size, with wide choice of electrical options and mounting configurations. 25 to 1270 pulses per revolution; 5 or 12 VDC input voltage; choice of square wave, line driver or amplified sine wave outputs; 0 to 50 kHz frequency range.
Tru-Mite Industrial Encoder	140 to 5000	5 to 15	TTL, HTL, CMOS, sine wave, line driver	0 to 100	⅜	2½ DIA x 2½ L	Rugged, high-resolution, wide-bandwidth encoder with heavy-duty shaft and bearings; 140 to 5000 pulses per revolution; 5, 12 or 15 VDC input voltage; square wave, line driver or amplified sine wave output; 0 to 100 kHz frequency range. Maximum shaft loading: 35 lbs. radial, 40 lbs. axial.
Tru-Tac Industrial Encoder	10 to 600	5 to 24	TTL, HTL, CMOS, line driver	0 to 30	⅜	3L x 3¼W x 3⅛H	Economical, rugged encoder with single or double-ended shaft. 100-lb. radial shaft loading, 40 lbs. axial; 7 to 600 (single channel) or 7 to 1200 (dual channel) pulses per revolution; 5 to 24 VDC input voltage; square wave or line driver output; 0 to 30 kHz frequency range.
Trim-Step Modular Encoder	50 to 250	5	TTL, HTL, CMOS, sine wave	0 to 25	N/A	2¼ DIA. x 1⅞ L	Uniquely designed to mount on stepper motors with large shaft end play (0.020"). Consists of a cylindrical, slotted rotor and concentric stator. 50 to 250 pulses per revolution; 5 VDC input voltage; triangular or square wave output; 0 to 25 kHz frequency range.
K3 Modular Encoder	50 to 1200	5 to 12	TTL, CMOS, sine wave	0 to 50	N/A	2 DIA. x ¾ L	Ultra low-cost encoder designed for easy installation on servo or stepper motors. Consists of an optically encoded disc on an aluminum hub and an LED light source/photocell/amplifier module. 50 to 1200 pulses per revolution; 5 or 12 VDC input voltage; square wave or amplified sine wave output; 0 to 50 kHz frequency range.

ABSOLUTE ENCODERS

	Resolution (Single Turn)	Input Voltage (VDC)	Output Codes	Output Formats	Frequency Range (KHZ)	Shaft Dia. (Inches)	Outline Dimensions (Inches)	Features
Model LR	9 Bit	5 to 24	BCD, Gray, natural binary	TTL, HTL, CMOS	0 to 50	⅜ or ⅝	5L x 3½ W x 3⅝H	Industrial duty, absolute encoder with BCD, Gray Code or natural binary output. Up to 512 steps per revolution; 5 to 24 VDC input voltage; open collector or passive pull-up output; 0 to 50 kHz frequency range. Maximum shaft loading: 35 lbs. radial, 40 lbs. axial.

PROGRAMMABLE LIMIT SWITCHES

	Number of "Cams"	Resolution (degrees)	Type of Output	Input Voltage	Shaft Dia. (Inches)	Outline Dimensions (Inches)	Features
Digi-Cam	1 to 12	1	TTL, HTL, CMOS	5 to 24 VDC	⅜ or ⅝	5L x 3½W x 3⅝H	Self-contained, solid-state dedicated electronic cam switch. Internal semiconductor memory can be factory programmed for up to 12 individual cam on/off profiles with 1° resolution and minimum dwell for 360° of shaft rotation. Same rugged mechanical construction and I/O voltages as Model LR Absolute Encoder.
Electronic Cam System	1 to 8 expandable to 24	1	Relay or Solid State	24, 115 or 230 VAC	Encoder ⅜ or ⅝ Programmer N/A	Encoder 5L x 3½W x 3⅝ H Programmer 13W x 5½H x 6D	Consists of a Model LR Absolute Encoder and a Programmer containing a digital readout, thumbwheel switches and mechanical or solid-state relays. It permits simple field adjustment of up to 8 (expandable to 24) on/off set points as a function of shaft position with 1° resolution. Absolute Encoder remembers shaft position after power interruption.

EEM PRODUCT SELECTION GUIDES

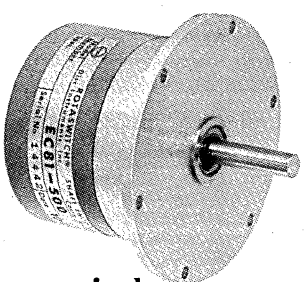
Use the EEM Product Selection Guides.
There are 33 Guides in this edition of EEM.
See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

LEADERS IN OPTICAL ENCODER TECHNOLOGY

Sub-miniature Incremental Encoders

820 Series

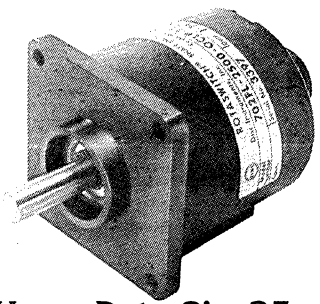
• 1" Diam. x 1.1" • Weight—3 Ounces • LED Source • Sine or Square Wave Output • Up to 625 Pulses/Rev.



Economical Optical Encoder

EC80 Series

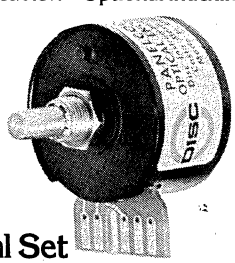
• Very Low Cost • Designed for OEM Use • LED Source • Up to 1024 Pulses/Rev. • Square Wave Output



Heavy-Duty, Size 25 Servo or Flanged Incremental Encoders

700 Series

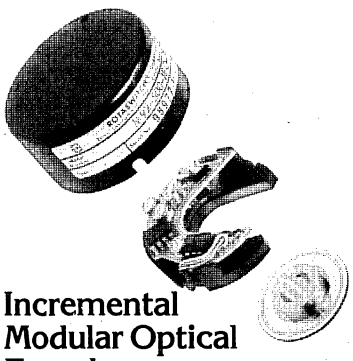
• Heavy-Duty Housing • Sealed for Industrial Applications • English/Metric Option • LED Source • Up to 2540 Pulses/Rev. • Optional Indexing



Manual Set Incremental Encoders

PANELCODER™ Series

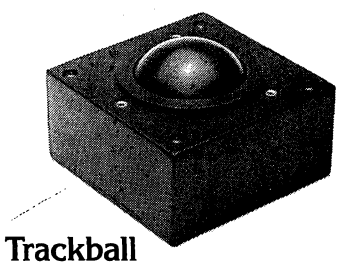
• Panel Mounting • Digital Output • Replaces Potentiometers • Long Service Life • LED Source • Circuit Board Connector • Photo Transistor Output



Incremental Modular Optical Encoder

M90 Series

• LED Light Source • Custom Comparitor, TTL, HTL, or CMOS Comp. • Die-Cast Photohead with 2-Hole 1.812" B.C. Mounting • Chrome-on-Glass Code Disc • Optional Index • Optional Metric Hub Bore Sizes



Trackball

LT 200 Series

• Low Cost • Field Serviceable • Heavy-Duty Ball • Long Life • LED Source

Disc Instruments Inc.
A Honeywell Subsidiary

The first name in Optical Encoders

Disc Instruments is unique in its ability to offer optical shaft position encoders in so wide a range of performance characteristics and prices. One primary reason is our total in-house capability to produce master and duplicate discs in sizes from sub-miniature to more than 30". We invite you to call us on any special encoder requirements.

* Overrange is limited to 75,000 psi. A shift in calibration may occur after exposure to pressures above 50,000 psi.
** Overrange is limited to 40,000 psi.
Continued product improvement necessitates that Endevco reserve the right to modify these specifications without notice.

The advantages of being tiny.

At Entran, we've solved most of the problems you might encounter with pressure transducers by making them tiny. And nowadays, tiny is the state-of-the-art.

Being tiny means you don't interfere with the integrity of the system being measured.

Being tiny means less measuring surface to bear loads, and a more compact solid state density with no moving parts.

Being tiny means being insensitive to acceleration, vibration and shock, so you get flat pressure readings, both static and dynamic.

And, being tiny means greater handling ease in hard-to-get-at places. Which adds up to more applications flexibility.

Entran pressure tranducers can usually be interfaced directly with scopes, recorders and milliammeters.

Our transducers come complete and ready to use. All you need supply is the excitation voltage on two leads and read output on the other two leads.

All units give you direct linear output in millivolts/psi and read both static and dynamic pressures. There's no need for charge or voltage amplifiers. Calibrations are traceable to The National Bureau of Standards.

Write Entran Devices, Inc., 10 Washington Ave., Fairfield, N.J. 07006 (201) 227-1002, Telex 130-361.

$360.00

Must not be used in water or corrosive medium.

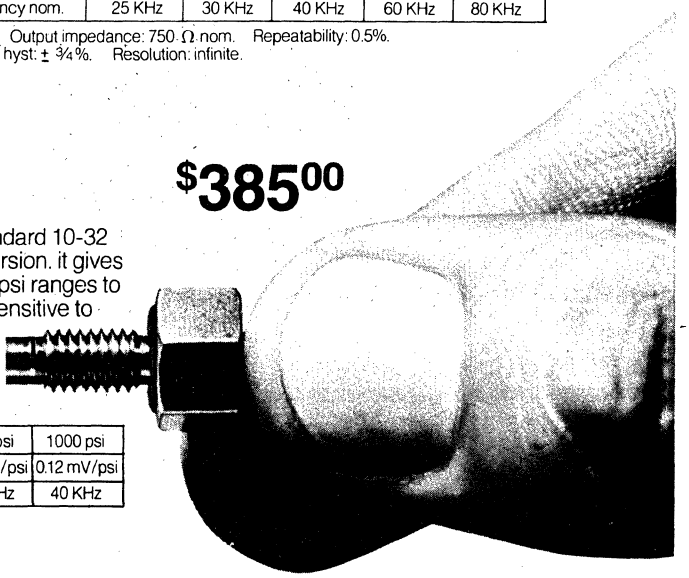
Only 0.080 in diameter (that's tiny), EPI-080.

This solid-state pressure transducer is 0.080" in diameter, 0.25" in length and occupies a volume of only 0.0013 cubic inches. Yet it gives accurate static and dynamic pressure readings like the big ones do. Its atomically bonded, diffused diaphragm with leads attached to the non-active area make this device virtually insensitive to acceleration, vibration and shock.

Typical ranges	25 psi	50 psi	100 psi	250 psi	500 psi
Sensitivity nom.	3 mV/psi	1.8 mV/psi	1.0 mV/psi	0.4 mV/psi	0.2 mV/psi
Useful frequency nom.	25 KHz	30 KHz	40 KHz	60 KHz	80 KHz

Excitation: 5V. Output impedance: 750 Ω nom. Repeatability: 0.5%.
Non-linear and hyst: ± ¾%. Resolution: infinite.

$385.00



Tiny but easy to handle, EPX-10

This easy to install pressure transducer is built with standard 10-32 UNF thread and is available in an optional M5 metric version. it gives flat pressure readings static and dynamic, in 5 to 5,000 psi ranges to as high as 90KHz. Has infinite resolution and is also insensitive to acceleration, vibration and shock. Made of stainless steel, and with its built-in "O" ring seal can be screwed in just about anywhere. However, for corrosive or water usage, order our "welded" version.

Typical ranges	5 psi	50 psi	100 psi	250 psi	1000 psi
Sensitivity nom.	3 mV/psi	1.5mV/psi	1.2 mV/psi	0.5 mV/psi	0.12 mV/psi
Useful frequency nom.	9 KHz	15 KHz	15 KHz	20 KHz	40 KHz

Combined non-linear and hyst: ± 1% below 100psi, ½% above 100 psi.
Excitation: 10V. Output impedance: 350 Ω nom.
Repeatability: 0.25%. Thread length: 7/16".

Entran® Pressure Transducers.

Call (201) 227-1002

The advantages of being tiny.

At Entran we build a line of accelerometers that can best be described as tiny.

Being tiny means you don't interfere with the integrity of the system being measured.

Being tiny gives you greater handling ease in hard-to-get-at places, which adds up to more applications flexibility. And, being tiny means less mass to distort your test scale, more room for other instruments. All at no sacrifice in test data.

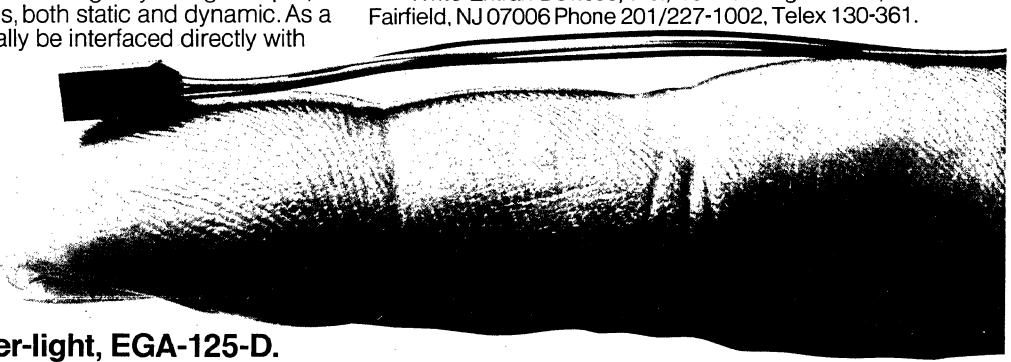
Entran accelerometers give you high output, low impedance readings, both static and dynamic. As a result they can usually be interfaced directly with scopes, recorders and milliammeters.

Entran accelerometers come complete and ready to use. All you supply is the excitation voltage on two leads and read output in millivolts on the other two leads.

All units give you direct linear output in millivolts/g and read both static and dynamic acceleration. There's no need for charge or voltage amplifiers. Calibrations are traceable to The National Bureau of Standards.

Write Entran Devices, Inc., 10 Washington Ave., Fairfield, NJ 07006 Phone 201/227-1002, Telex 130-361.

$299.00

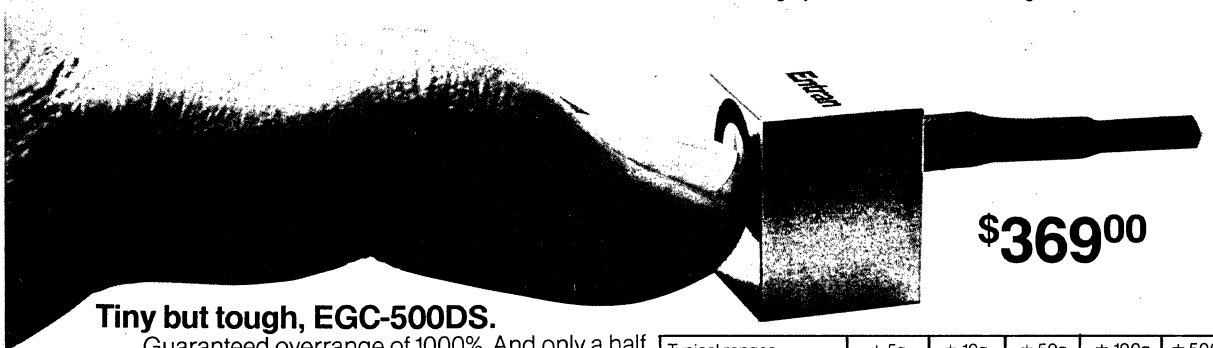


Tiny and feather-light, EGA-125-D.

This accelerometer weighs only one half a gram. Is less than 0.006 cu. inches in volume. Yet gives you static & dynamic readings of acceleration, vibration and shock. And comes with .7 critical damping to eliminate resonance. ("D" is for "damped.")

Typical ranges	± 5g	± 10g	± 50g	± 100g	± 500g
Sensitivity nom.	15 mV/g	12 mV/g	4 mV/g	2.5 mV/g	0.5 mV/g
Useful frequency nom.	150 Hz	200 Hz	500 Hz	600 Hz	1200 Hz

Excitation: 15V, Weight: ½ gram without leads, Linearity: ± 1%,
5 other mounting styles available at no extra charge.



$369.00

Tiny but tough, EGC-500DS.

Guaranteed overrange of 1000%. And only a half inch cube to boot.

Static & dynamic measurements of acceleration, vibration and shock in ranges from 5 to 1,000 g. Fully damped to eliminate resonance and fitted with mechanical stops to impede overload response.

Typical ranges	± 5g	± 10g	± 50g	± 100g	± 500g
Sensitivity nom.	25 mV/g	20 mV/g	4 mV/g	2 mV/g	0.5 mV/g
Useful frequency	150 Hz	200 Hz	600 Hz	1000 Hz	1500 Hz

Excitation: 15V, Damping: 0.7 cr. nom., Linearity: ± 1%
Output impedance: 450 Ω nom., Input impedance: 1000 nom.
Size: 0.5" x 0.5" 0.6" width, 10-32UNF tapped hole

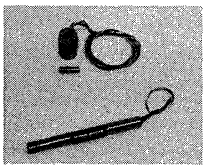
TRANSDUCERS & SYSTEMS

Twin Lakes Road / P.O. Box 185
North Branford CT 06471
(203) 481-5721 / TWX 710-452-3092

TRANSDUCERS & SYSTEMS

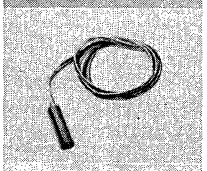
OUR PRECISION PRODUCTS INCLUDE:



LINEAR VARIABLE DIFFERENTIAL TRANSDUCERS

- *DC in/DC out or AC in/AC out*
- *High accuracy and stability*
- *Low input power :<300mWdc*
- *±0.02" to ±10.00" full scale*

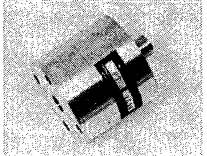
MDP/SD LVDTs provide self-contained signal conditioning. MA/MDP models offer small size, high accuracy, and high sensitivity. SA/SD models allow higher ranges and ruggedized design.



PROXIMITY SENSORS/SWITCHES

- *High repeatability*
- *0.004" to 0.25" full scale*
- *Sizes from 0.2" dia.*
- *AC/DC/switch types*

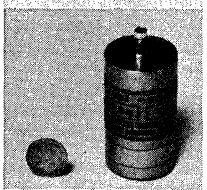
These inductive sensors are available for DC and for AC applications. High accuracy and repeatability provide excellent performance under continuous monitoring conditions.



PRESSURE TRANSDUCERS

- *Ranges from 1 to 2,000 psi*
- *AC and DC models*
- *High linearity and accuracy*
- *High repeatability*

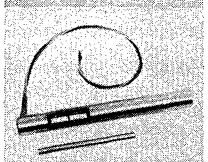
PT Series LVDT-type pressure transducers offer a broad selection of ranges, low hysteresis error and high linearity. Voltage, current, or frequency outputs are available.



LOW RANGE FORCE/WEIGHT TRANSDUCERS

- *AC and DC models*
- *Tension/compression from ±10 gms full range*
- *20ms full load response*

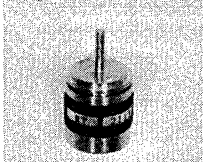
Applications include laboratory use, biomedical and pharmaceutical measurements, high speed weighing, aero/hydrodynamic modeling, and others where precise determination of low range forces is necessary. Closed loop versions are also available.



LINEAR VELOCITY TRANSDUCERS

- *0.5" to 20.0" ranges*
- *Single-piece high flux-density magnetic core*
- *1000 ips capability*

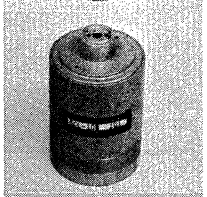
These LVTs provide outputs directly proportional to the rate of change of an object's position. The output also indicates the direction of motion. Rugged construction assures high tolerance to shock and vibration.



ROTARY VARIABLE DIFFERENTIAL TRANSFORMERS

- *AC and DC models*
- *Unlimited rotation*
- *±60° linear range*
- *Infinite resolution*

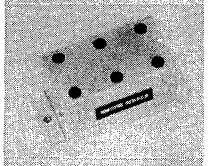
These angular position LVDTs offer unlimited rotation and non-contact measuring. They are available in AC and DC models, and with an independent stator and rotor.



ACCELEROMETERS

- *±1G to ±100G full scale*
- *0.1% typical linearity*
- *±5Vdc full scale output*
- *AC models available*
- *Sizes from 0.625" dia.*

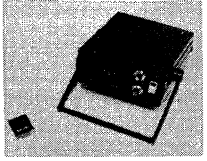
These small, rugged accelerometers offer high accuracy and good frequency response. Self-contained signal conditioning provides high output. Also available are closed loop (force-balance) models with higher accuracies and extended frequency response.



INCLINOMETERS

- *±1° to ±90° full scale*
- *Measure to 0.1 second of arc*
- *Linearity to ±0.02%*
- *AC models available*

These inclinometers provide a DC output proportional to the sine of the angle of tilt, resolving changes in angle as small as 0.1 second of arc, and changes in tilt as low as 0.000006 inch/foot. AC and closed loop version also available.



SIGNAL CONDITIONING MODULES & CONTROL BOXES

Signal conditioning modules for our AC-LVDTs, and all of our AC transducers, are available for AC or DC inputs/outputs, with options such as zero adjustment ranges to 100%, output currents to 500mA, preset limits, frequency outputs, and a choice of several methods of interconnection. Control boxes, including digital displays, printers, and other output instrumentation are also available.

Providing excellent performance at minimum cost, the P600 Series is intended for custom, OEM pressure measurement applications. This series features exceptional repeatability, low hysteresis, accurate operation over a broad temperature range, and the ability to perform without zero shift when subjected to high overpressures. These characteristics, combined with long term stability, make the series ideal for microprocessor-based applications.

Key to the uniform performance and low cost features of this series is Kavlico's patented ceramic sensing element with its integral signal conditioning that employs a reliable solid state, custom hybrid circuit. Temperature compensation and calibration is provided through use of computer-controlled laser trimming of hybrid circuit components. As a result, uniformity from unit-to-unit is assured and there is no need for adjustment or recalibration by the user. In addition, the P600 Series maintains repeatable performances even after extraordinary overpressures, which has been demonstrated in over five years of automotive sevice.

The P600 Series provides a high level output voltage, permitting it to interface easily with a variety of circuits, indicators, or alarms. In addition, its ratiometric output is ideal for digital monitoring. By using the supply voltage as the reference for the conversion circuit, measurement accuracy is maintained regardless of supply voltage variations.

The P600 Series provides a choice of rugged die cast aluminum or high dielectric strength Valox housings. Seal materials are available to meet a variety of applications.

In electrically noisy environments, reliability and performance are assured with protection against electromagnetic interference (EMI) and line voltage transients as a standard feature on most models.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

MICRO SWITCH

PRESSURE SENSORS

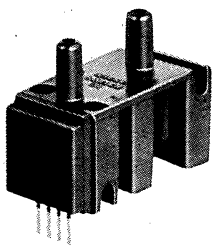
MICRO SWITCH solid state pressure sensors are ideally suited to applications that require exact measurement of pressure. They provide the important benefits of repeatability, low hysteresis, and long term stability.

The sensing element in each sensor is a square silicon chip with integral sensing diaphragm and ion implanted piezoresistors. Pressure applied on the diaphragm causes it to flex, changing the resistance, which results in an output proportional to pressure.

NON-SIGNAL CONDITIONED SENSORS

There are four series of non-signal conditioned sensors. They provide a low level output (typically 40 to 250 mV). Each series includes the basic sensor version, and a version with laser trimmed resistors (for close tolerances on null and sensitivity) and a thermistor for limited temperature compensation.

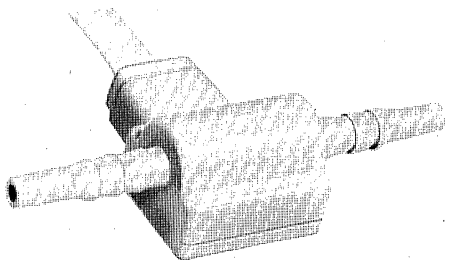
120PC



120PC series are small plastic packages equipped with printed circuit board terminals. 124PC is the basic sensor, and 126PC is trimmed and has limited temperature compensation.

Series	Pressure Range (psi)	Type*	Full Scale Output (F.S.O.)**	Electrical Excitation
124PC	0-5	D	115 mV ±35	10 VDC or 2 mA
	0-15	D	250 mV ±75	
	0-30	D	195 mV ±85	
126PC	0-5	D	50 mV ±1.5	16 VDC max.
	0-15	D	100 mV ±1.5	
	0-30	D	79 mV ±4	

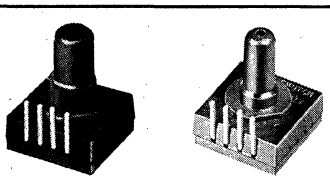
150PC



150PC series are specifically designed to measure flow-thru pressure media. The remote pressure reference is inside the termination cable. 154PC is the basic sensor, while 156PC is trimmed and temperature compensated.

Series	Pressure Range (psi)	Type*	Full Scale Output (F.S.O.)**	Electrical Excitation
154PC	0-5	G	115 mV ±35	10 VDC or 2 mA
	0-15	G	99 mV ±41	
	0-30	G	195 mV ±85	
156PC	0-5	G	250 mV ±75	14 VDC max.
	0-15	G	40 mV ±1.5	
	0-30	G	79 mV ±4	

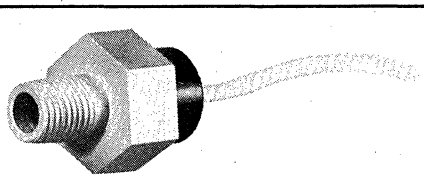
130PC



130PC series are miniature plastic packages, also equipped with printed circuit board terminals. 134PC is the basic sensor version. 136PC and 137PC are trimmed and temperature compensated. 136PC is voltage excited, while 137PC is current excited.

Series	Pressure Range (psi)	Type*	Full Scale Output (F.S.O.)**	Electrical Excitation
134PC	0-5	A, G	115 mV ±35	10 VDC or 2 mA
	0-15	A, G	250 mV ±75	
	0-30	A, G	195 mV ±85	
136PC	0-5	A, G	50 mV ±1.5	16 VDC max.
	0-15	A, G	100 mV ±1.5	
	0-30	A, G	79 mV ±4	
137PC	0-5	A, G	50 mV ±1.5	2 mA max.
	0-15	A, G	100 mV ±1.5	
	0-30	A, G	79 mV ±4	

230PC



230PC series are stainless steel housed Gage type sensors, compatible with a wide range of pressure media. The atmospheric pressure reference is inside the termination cable to reduce the chance of contaminants entering the enclosure.

Series	Pressure Range (psi)	Type*	Full Scale Output (F.S.O.)**	Electrical Excitation
234PC	0-15	G	250 mV ±75	10 VDC or 2 mA
	0-30	G	195 mV ±85	
	0-60	G	135 mV ±45	
	0-100	G	225 mV ±75	
236PC	0-15	G	100 mV ±1.5	16 VDC max.
	0-30	G	79 mV ±4	
	0-60	G	60 mV ±2	
	0-100	G	100 mV ±2	

* Type: A — Absolute; D — Differential; G — Gage.

** F.S.O. is the algebraic difference between end points (output at minimum and maximum pressure).

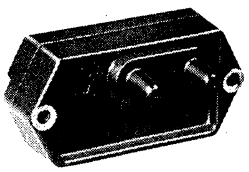
MICRO SWITCH

PRESSURE SENSORS

SIGNAL CONDITIONED SENSORS

The three signal conditioned series provide amplified high-level outputs (5V or ±2.5V). They are hybrid IC devices, with integral temperature compensation circuitry optimized on each unit as part of the calibration procedure. Null and full scale output are similarly controlled.

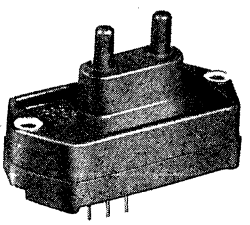
140PC



140PC series are plastic packages, equipped with printed circuit board terminals (color-coded leadwires are optional). They may be used to measure positive pressures, or for positive/negative pressure measurement. This series includes a two-wire pressure-to-current transducer, which senses industry standard 3-15 psi and provides a 4-20 mA output proportional to pressure.

Series	Pressure Range (psi)	Type*	Full Scale Output (F.S.O.)**	Electrical Excitation
142PC	0-5 0-15 0-30	D, G A, D, G A, D, G	5 VDC ±.15 1 VDC Null	7-16 VDC
143PC	±2.5 ±5 ±15	D D, G D, G	±2.5 VDC 3.5 VDC Null	7-16 VDC
149PC	3-15	D	4-20 mA	10-40 VDC

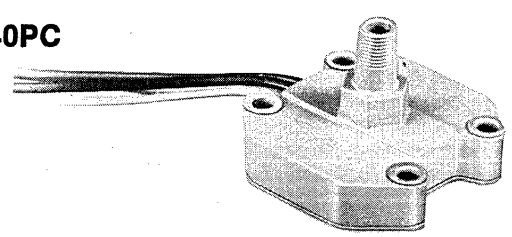
160PC



160PC series pressure sensors measure extremely low pressures, and feature high reliability. The package is similar to the 140PC series.

Series	Pressure Range (psi)	Type*	Full Scale Output (F.S.O.)**	Electrical Excitation
162PC	0-1	D, G	5 VDC ±.20 1 VDC Null	4.8-12 VDC
163PC	±5″ H_2O	D, G		
164PC	0-10″ H_2O	D, G		

240PC



240PC series sense positive pressures up to 250 psi, in addition to positive/negative pressures up to ±15 psi. They are protected by die-cast aluminum housings with O-ring sealing for contamination resistance.

Series	Pressure Range (psi)	Type*	Full Scale Output (F.S.O.)**	Electrical Excitation
242PC	0-15 0-30 0-60 0-100 0-150 0-250	G G G G G G	5 VDC ±.20 1 VDC Null	7-16 VDC
243PC	±2.5 ±5 ±15	G G G	±2.5 VDC 3.5 VDC Null	7-16 VDC

Request MICRO SWITCH PC literature for specifications and Order Guides.

* Type: A — Absolute; D — Differential; G — Gage.
** F.S.O. is the algebraic difference between end points (output at minimum and maximum pressures).

FOR DIMENSIONS REQUEST CATALOG #983

FEATURES AND APPLICATIONS:

- Accurate measurement of electric power consumed by equipment
- Accurate for any conditions of phase, voltage unbalance, current unbalance and power factor
- Output is proportional to true power delivered to the load
- Transducers with sensors internal and C, D, & E provide excellent current transient response for measuring SCR controls, chopped waveforms or application where harmonics are present
- Highly-accurate, without worrying about the inaccuracies of current transformers and potential transformers
- Split sensors available
- Current sensors are included and are calibrated with the watt transducer (where required)
- For interface with meters, recorders, data loggers, computer or other instrumentation, select options "A" through "F"
- Wide frequency range: 48 to 70 Hz
- Standard 1 mA output, other options available

P5 SERIES SPECIFICATIONS:

INPUT:

Voltage: See Tables..

Current: See Tables

Frequency Range: 50 to 70 Hz

Power Factor Range: Any

Response (Transient 90%): <100 microseconds with models using internal sensors or sensors C, D, or E
1 millisecond with models using current sensors W, X, and Y

Burden:
Voltage: 1.25 VA
Current: 1.25 VA
Option Amplifier: 2 Watts

Current Overload:
1 thru 15 Ampere models and those using current sensors W, X, and Y
2 times rating (continuous)
6 times rating (10 sec)
Models using external current sensors C, D and E
50 times rating (continuous)

Dielectric Test: (Input/Output/Case): 1500 VAC (RMS)

Surge: Withstands IEEE SWC Test

SPECIFICATIONS (cont.):

OUTPUT:

B: Standard, 1 mA DC at Rated Output (Requires 115 VAC instrument power)
Option A: 1 mA DC at Rated Output (See Note 1)
Option C: 10 VDC at Rated Output (See Note 1)
Option D: 10 VDC at Rated Output (Requires 115 VAC instrument power)
Option E: 4-20 mA DC. 20 mA DC at Rated Output, 4 mA DC at Zero
Millivolt Options Available Consult Factory
Output Ripple: <1% of R.O.
Output Calibration: The output is proportional to real power delivered to the load. $P = EI \cos \phi$
Response Time: 250 milliseconds
Output Loading:
Standard Model: 0-10K ohms
Options A: 0-10K ohms
Options C & D: >2K ohms
Option E: 0-1500 ohms
Calibration Adjustment Range: ±10% Min.
Temperature Effect (−10°C to +60°C): ±1% of Reading, ±0.1% R.O.

ACCURACY:

±0.5% at Rated Output
(including power factor, linearity, repeatability initial set point, and current sensor).

NOTE (1) Self powered input voltage ranges for models with options A and C are limited as follows: 85 to 135V for 0 to 150V models 200 to 280V for 0 to 300V models, and 380 to 550V for 0 to 600V models.

7½B	0 to 150	0 to 6.25	1.5K	3φ4W	2½

NOTE: On 3 phase 4 wire models, phase to neutral voltage is specified.
Optional for 50 Hz operation add "X-127" to model number.

FEATURES AND APPLICATIONS:

- Provides ±0.2% of reading accuracy and 0 to 1 mA current output proportional to reactive power
- Models available in 1, 2, 2½, and 3 element configurations to meet monitoring and control needs
- Measures forward or reverse reactive power flow
- Each unit is precalibrated at the factory to provide 1 mA at the Rated Output (RO) against standards which are traceable to NBS
- Accuracy specifications include influences of variation in voltage, current, power factor and load changes
- Temperature effects are less than ±0.005% per degree C over the range of −20°C to +60°C

EV5 AND EW5 SERIES SPECIFICATIONS:

INPUT:

VOLTAGE
Effective Range: See Tables
Burden: Less than 0.1 VA at 120V, 240V, or 480V
Overload: Max continuous 175V, 350V, or 600V

CURRENT
Effective Range: See Tables
Burden (max.): 0.28 VA per element
Overload: (continuous) 2X rating for 6.25A or 10A, 1X rating for 20A
(Transient) 50A for 10 sec. per hour, 250A for 1 sec. per hour

OUTPUT:

Rated Output (RO): ±1 mA DC
Output Loading: 0 to 10K ohms
Compliance: 12.0 volts DC minimum
Open circuit output voltage limited to ±15 VDC
Response Time (99%): Less than 400 milliseconds

ACCURACY:

(±0.2% of reading, ±0.05% of RO)
Includes the effects of voltage, current, load and power factor within the effective ranges

Specifications continued on next page

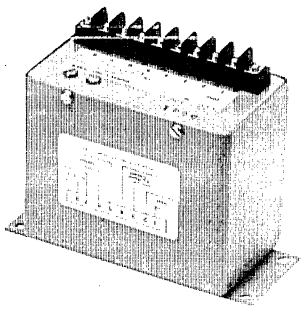
OSI ELECTRONIC PRECISION AC WATT TRANSDUCER EW5 SERIES

ACCURACY ±0.2% OF READING



FEATURES AND APPLICATIONS:

- Provides ±0.2% of reading accuracy and 0 to 1 mA current output proportional to electrical power delivered to a load
- Models available in 1, 2, 2½, and 3 element configurations to meet monitoring and control needs
- Measures forward or reverse power flow
- Each unit is precalibrated at the factory to provide 1 mA at the Rated Output (RO) against standards which are traceable to NBS
- Accuracy specifications include influences of variation in voltage, current, power factor and frequency, and load changes
- Temperature effects are less than ±0.005% per degree C over the range of −20°C to +65°C

SPECIFICATONS (cont.):

Frequency, VAR Only: 60 Hz, 50 Hz Models (optional)
Frequency, Watt Only: 58 to 62 Hz, 48 to 52 Hz on 50 Hz Models (optional)
Power Factor: Any
Temperature Range: −20°C to +60°C
Temperature Effect: ±0.005% per degree C Typical
Operating Humidity: 0 to 95% non-condensing
Dielectric Test: Input/Output/Instrument Power/Case — 1500 VAC (RMS)
Surge: Withstands IEEE SWC Test
Calibration Adjustment: ±2% minimum
Instrument Power: 90 to 135 VAC, 50 to 70 Hz Burden less than 2 VA at 115 VAC
Weight: 3.1 lbs. Maximum

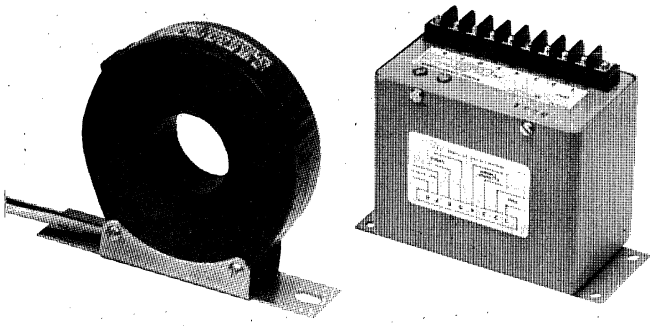
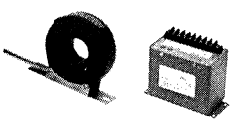
AC POWER FACTOR, AND WATT TRANSDUCER PC11 SERIES



FEATURES:

- True power and power factor measurements for distorted sine wave inputs
- Two separate output signals of 0 to 1 milliampere corresponding to watts and power factor
- Direct reading of power factor, not phase angle for sinusoidal waveforms or distorted waveforms
- Power factor computed by dividing real power by apparent power

SPECIFICATIONS:



INPUT:

Voltage: See Tables

Current: See Tables

Frequency Range: 50 to 70 Hz

Power Factor Range: Unity to Lead or Lag 0

Response: 100 microseconds to 90%

Burden: Voltage: 1.25 VA
Current: 1.5 VA

Current Overload:
2 times continuous
6 times for 10 Sec.

Dielectric Test: (Input/Output/Case) 1500 VAC

Instrument Power Required: 115 VAC ±10% 50/60 Hz

OUTPUT:

Watts: 1 mA at Rated Output

Power Factor: +1 mA at Unity PF, 0 mA at Lead or Lag 0

Response Time: 250 mSec.

Output Loading: 0 to 10KΩ

Temperature Effects (−10°C to +60°C): ±1%

ACCURACY:

Watts: ±0.5% RO

Power Factor: From 10% to 120% of Rated VA
±0.01 PF

DC TO 400 Hz WATT TRANSDUCER PC8 SERIES

FEATURES AND APPLICATIONS:

- DC to 400 Hertz
- Ideal for variable frequency applications
- Accurate monitoring of power that contains DC, AC and non-sinusoidal waveforms
- Response less than 50 microseconds
- Ideal for use in SCR and other AC or DC switching circuits
- Output isolated from input

ORDERING INFORMATION:

The part numbers listed in the selection tables are incomplete. The voltage and current designation code must be added.

Part Number PC8- * — △

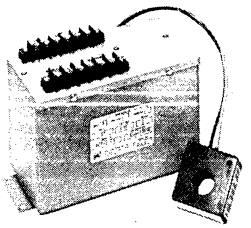
Example: PC8-3-01, which would be a PC8 transducer with 125VDC @ 100 amperes.

"*" Voltage Designation

CODE	FS VOLTS	RANGE
1	25	0 to 30
2	50	0 to 60
3	125	0 to 135
4	250	0 to 275
5	400	0 to 450
6	500	0 to 550
7	600	0 to 650

"△" Current Designation

CODE	FS CURRENT	RANGE
01	100	0 to 100
02	200	0 to 200
03	300	0 to 300
04	400	0 to 400
05	600	0 to 600
06	1000	0 to 1000
07	2000	0 to 2000



SPECIFICATIONS:

INPUT:

Voltage: Check code designation for FS voltage ranges from 25 to 600 volts (peak AC or DC)
Burden: >1 megohm
Current: Check code designation (specify FS range from 100 ampere to 2000 ampere, lower range uses 100 ampere transducer with ampere turns)
DC Insertion Loss: None
Overrange Without Damage: 10 times rating
Frequency Range: DC to 400 Hz
Response Time: <50 microseconds

OUTPUT:

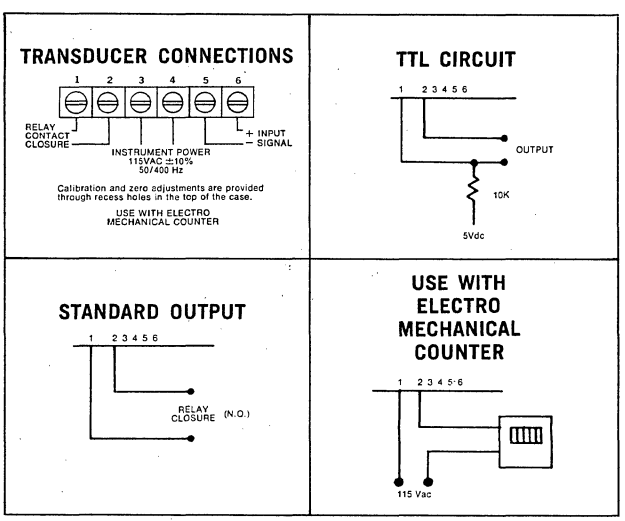
Full Scale Output: 1 mA DC (0 to 10K ohm)
Response: 250 milliseconds
Ripple: <1% Full Scale at 60 Hz
Accuracy: (FS Voltage X FS Current) ±1.0% FS
Temperature Effect: (0 to 40°C) ±0.1% of FS ±1% of Reading
Isolation: Input/Output/Case 1000 VDC
Instrument Power: 115 VAC ±10% 50/400 Hz

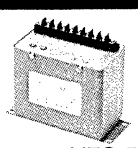
FOR DIMENSIONS REQUEST CATALOG #983

PRECISION INTEGRATOR VFC SERIES ANALOG TO PULSE CONVERTER

FEATURES:

- Output is a switch closure for activating external circuits
- Switch closure can be directly related to a specific integrated quantity
- Output can be preset at the factory





SPECIFICATIONS:
(common to all)

INPUT:

Impedance: >1 megohm except VFC-50, 100 ohms
Usable Range: Up to 1.25 x FS
Frequency: DC with up to 100% ripple at 120 Hz or higher

OUTPUTS:

Linearity: ±0.1% FS
Accuracy: ±0.25% FS
Relay: Normally open, SPST
Relay Contact Rating: 10 VA Max., 120V Max., 0.5A Max.
Relay Closed Period: 100 milliseconds, typ.
Temperature Effect: (−10°C to +60°C) ±0.5%
Instrument Power: 115 VAC ±10%, 50/400 Hz
Isolation (Input/Output/Case): 1000 Volts DC

MODEL	INPUT	OUTPUT RELAY CLOSURE RATE*
VFC-10	0 to +50 mV	0 to 10,000 per hour
VFC-20	0 to +100 mV	0 to 10,000 per hour
VFC-30	0 to +150 mV	0 to 10,000 per hour
VFC-50	0 to +1 mA	0 to 10,000 per hour
VFC-60	0 to +10V	0 to 10,000 per hour

* NOTE: Option 1 — Output closure rate can be set between 1K and 12K counts per hour at no charge.

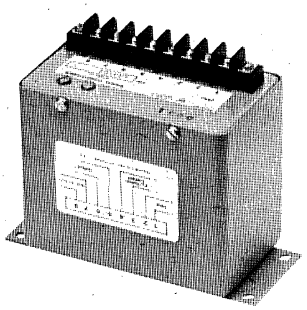
DC & RMS SIGNAL CONDITIONERS CTA SERIES



FEATURES AND APPLICATIONS:

- Designed for use with OSI current transducers
- Suitable for monitoring or control purposes
- CTA113 through CTA215E provide an output directly proportional to the true RMS value
- Calibration and zero adjustments provided

SPECIFICATIONS:

AMPLIFIER:

Linearity: 0.1% RO
Frequency Range: DC to 5 KHz
Output Response: to 90% 40 μsec.
(RMS Models) 200 msec.
Ripple: <.25% RO
Crest Factor: 3 within rating
7 within 1%
Short Circuit Protected: Yes
Isolation: Input/Output isolated from case

EXCITATION CURRENT:

Regulation: Line/Load ±0.01%
Output Voltage at Full Load: 6 VDC

TEMPERATURE EFFECTS:

(0-70°C) ±0.005%/°C

INSTRUMENT POWER:

115 VAC ±10%, 5W, 50-400 Hz
24/28 VDC ±10%, 8W, DC
(Positive to Terminal 8)

Option (K) 150 mV Input

APPLICATION NOTES:

(1) When using an OSI current transducer, the output shield should be tied to terminal 3 on the signal conditioner.
(2) For a positive amplified output, connect the current transducer with the red polarity dot toward the most positive voltage terminal. See connections below.
(3) All RMS models provide a DC output proportional to the true RMS input.

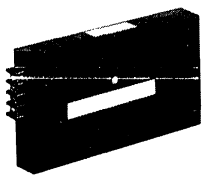
CURRENT TRANSDUCERS CT-L SERIES

DC TO 5 KILOHERTZ RESPONSE



CT1KHT

CT50LT

CT200LT

CT1KLTS SPLIT-CORE OPTION

FEATURES AND APPLICATIONS:

- 5000 Volt line-to-output isolation
- DC to 5 kilohertz response
- Bi-directional operation
- Linearity 0.5%, 50 to 2000 Amp
- ±1% operation over temperature range
- Less than 50 microsecond response time for 50 to 2000 Ampere units
- Sustained overload capability to 50 times rating
- Stable during severe vibration
- Easy installation
- Split-core models available
- Suited for variable frequency AC systems with DC components or chopped wave
- Replace shunts
- No insertion loss

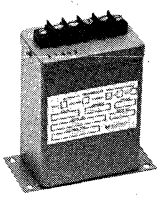
AC VOLTAGE AND CURRENT TRANSDUCERS VT SERIES CT SERIES

FEATURES AND APPLICATIONS:

- Inexpensive
- Accurate
- Self powered
- Wide frequency range
- Isolated Output
- Reliable



VOLTAGE TRANSDUCERS

MODEL	VOLTAGE (VAC) RANGE	OUTPUT CAL
VT120	0 to 150	1 mA @ 150V
VT240	0 to 300	1 mA @ 300V
VT480*	0 to 575	1 mA @575V

* Includes OSI 226-145 Potential Transformer

SPECIFICATIONS (common to all):

Accuracy (Calibration, linearity @ 25°C): ±0.5% FS

Frequency Range: 50 to 500 Hz

Response Time: 400 msec.

Temperature Effect (from calibrated value):
−20°C to +60°C ±1% of Reading

Ripple: <1% FS

Full Scale Output: 1 mA DC

Output Loading: 0-10K ohms

Overload (Continuous):
Voltage: Full Scale Rating
Current: 2X Rating except CT10-1 & CT20-1,
1.25 Rating — 1 Second Transients, 50 X Rated Input

Burden:
Voltage: 2.8 VA FS
Current: 1 VA FS

Operating Range (Extended):
Voltage: Full Scale
Current: 1.2 X Rating

Dielectric Test (Input/Output/Case): VT and CT
1500 VA

RMS VOLTAGE & CURRENT TRANSDUCERS CT-R SERIES VT-R & CT-RT SERIES

FEATURES AND APPLICATIONS:

- Accuracy 0.25%
- Output directly proportional to the RMS value
- Can be overranged 20% with accuracy
- Current Transducers: 20 to 2000 Hertz range
- Voltage Transducers: 50 to 400 Hertz range
- CT1R and CT1RV, DC to 2 KHz

SPECIFICATIONS:

Accuracy and Linearity: ±0.25% at calibration frequency. Specify if other than 60 Hz

Accuracy & Linearity: ±0.5% 48 to 420 Hz

Frequency Range:
Voltage: 48 to 420 Hz
Current: DC, 20 to 2 KHz

Inputs:
Voltage: See Tables
Current: See Tables

Overload:
Voltage: See Table
Current: (Transient) 50A for 10 Sec. Per Hour, 250 A for 1 Sec. Per Hour, excluding CT1R and CT1RV

Input Signal Burden:
Voltage: 0.12 VA FS
Current: 0.28 VA FS

Dielectric Test (Input/Output/Case):
Voltage: 1500 VAC RMS

Output Response: 200 milliseconds to 90%

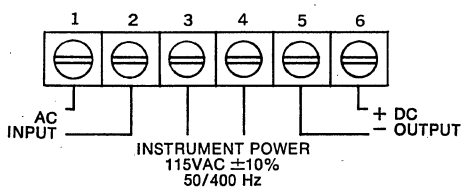
Ripple: <1% FS

Output Short Circuit Protected

Temperature Effect: ±0.5% (−10°C to +60°C)

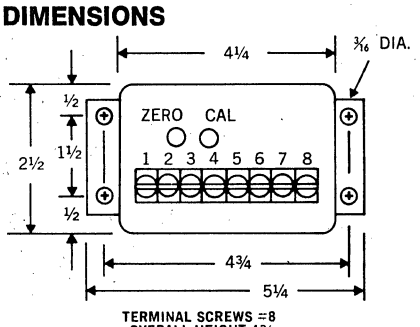
External Power: 115 VAC ±10%, 50 to 400 Hz

VOLTAGE AND CURRENT TRANSDUCER CONNECTIONS

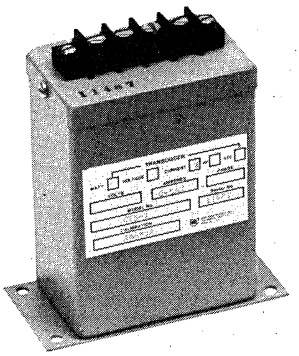


Calibration and zero adjustments are provided through recess holes in the top of the case.

CASE DIMENSIONS



TERMINAL SCREWS =8
OVERALL HEIGHT 4⅜



MODEL	INPUT SIGNAL	CALIBRATION OUTPUT	LOAD OHMS

CT1R	0-5A	1 mA DC @ 5A	0-10K
CT1RV	0-5A	10 VDC @ 5A	>2K

* NOTE:

(1) CTR Series output is NOT isolated from input. Use instrumentation which is isolated from source. Caution is advised when making connections.

(2) All models have been calibrated at the factory to give the correct output at the specified input rating. The "CAL" adjustment is set at the factory and should not be adjusted unless recalibration is required. The "ZERO" adjustment is provided to correct for an output offset "at zero input conditions," without affecting the calibration of the unit.

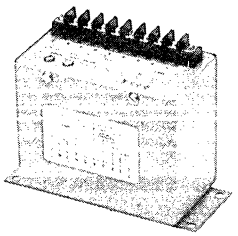
DC & RMS VOLTAGE TRANSDUCERS VT7 & VT8 SERIES



FEATURES AND APPLICATIONS:

VT7 SERIES:

- DC to 5 KHz Frequency Response
- Provides an output isolated signal proportional to DC input voltage
- 50 or 100 millivolt shunt model available
- 1500 V isolation input to output

ORDERING INFORMATION:

Add the "Code Designation" to the Model Number below for the Type, Rated Voltage, and Rated Output desired.

Example: VT7-01B: DC Input of 0 to 50 MVs and output 0 to 1 mA.

MODEL NO. VT * — O X

*CODE	TYPE
7	DC, Input
8	AC, AC/DC Input

O CODE	RATED VOLTAGE
(1) 01	50 mV
(1) 02	100 mV
1	12V
2	25V
3	50V
4	100V
5	150V
6	200V
7	300V
8	400V
9	500V
10	600V
11	700V
12	800V
13	900V
14	1000V

External multiplier resistance box is supplied.

X CODE	RATED OUTPUT SIGNAL
B	1 mA
D	10 Volts
E	4-20 mA

NOTES:
(1) 50 or 100 millivolt model is available in the VT7 Series only.
(2) Models with the rated input voltage above 600 volts require an external multiplier resistance box, which will be supplied with the unit.

FOR DIMENSIONS REQUEST CATALOG #980

FEATURES AND APPLICATIONS:

VT8 SERIES:

- DC to 5 KHz frequency response
- Output signal proportional to RMS value of AC, or AC/DC
- 1500 Volt isolation between the input and output

SPECIFICATIONS:

INPUT:

Voltage: (Check code designation for rated input)

Overvoltage: 2 times rated input or 1500V whichever is smaller

Burden: >100K ohm

Frequency Range: DC to 5 KHz

Response Time (99%): 50 μsec.

Isolation (Input/Output/Case/Instrument Power): 1500 VAC

Instrument Power Required: 115 VAC ±10%, 50-400 Hz

OUTPUT: (Short Circuit Protected)

Output Signal:
For VT7: 0 to ± mA, 0 to ±10 volts or a 4 to 20 mA signal which is directly proportional to the rated DC input voltage

For VT8: 0 to +1 mA, 0 to +10 volts or 4 to 20 mA DC signal which is directly proportional to the rated RMS input voltage

Response Time:
VT7 Models: 50 microseconds
VT8 Models: 200 milliseconds

Load on Output:
1 mA, 0 to 10K ohms
10 Volts, >2K ohms
4-20 mA, 0 to 500 ohms

Temperature Effects on Output (−10°C to +60°C): ±1%

ACCURACY:

±0.5% RO
(including set point, linearity and repeatability)

Calibration: Each unit is calibrated at the factory for Rated Output Signal is equal to the Rated Input Voltage

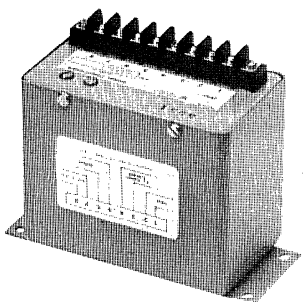
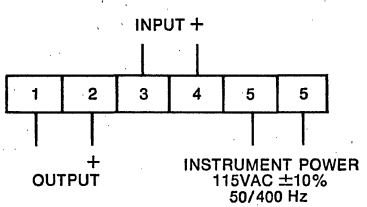
PRECISION CURRENT CONVERTER SC-E SERIES



FEATURES AND APPLICATIONS:

- Provides 4 to 20 mA process control signal
- Excellent accuracy ±0.1% FS
- Models available for most common analog inputs
- Rugged for industrial application
- Terminal block connections



SPECIFICATIONS: (common to all):

INPUT:

Range: See Table
Overload (without damage): 10 times input
Isolation: (input is not isolated from output)
Load Impedance: 0 to 1500 ohms

OUTPUT:

Range: 4 to 20 mA DC
Load Impedance: 0 to 1500 ohms
Response Time 99%: 100 μSec.
Ripple: >1% FS
Accuracy and Linearity: ±0.1% FS
Calibration:
Rated input signal = 20 mA DC
Zero input signal = 4 mA DC
Temperature Effect: −20°C to +65°C, ±1%
Instrument Power: 115 VAC ±10%, 50-400 Hz
Adjustments:
"Zero" adjust for 4 mA offset
"Cal" adjust for 20 mA full scale

VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

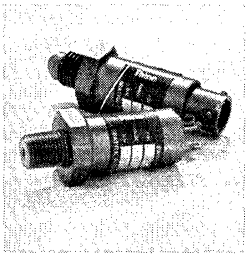
WPS word processing software

Y

YIG yttrium iron garnet

Paine® BONDED STRAIN GAGE PRESSURE TRANSDUCERS FOR INDUSTRY & AEROSPACE

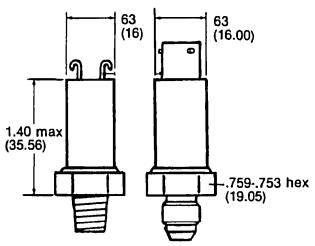
SERIES 210-30



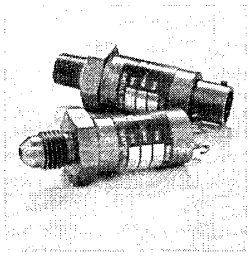
Series 210-30: 0-500 to 0-5000 PSIA and PSIS. When you need a rugged transducer for hydraulic systems with non-corrosive media applications see 210-35.

This series is ideally suited for the rigorous environments found in test stand work and wet industrial applications.

This series is available with either hooked terminals or electrical connectors.



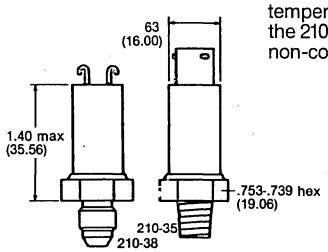
SERIES 210-35 AND 210-38



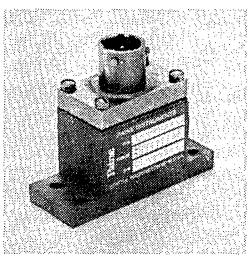
Series 210-35 and 210-38: 0-2000 through 1-10,000 PSI. A very rugged transducer for use in all industrial corrosive materials are present.

This series features all welded, all stainless steel construction to provide a high degree of compatibility and system integrity.

Both series are available with either MS Bayonet lock connectors or hooked terminals. The 210-35 is temperature compensated while the 210-38 is lower in cost and non-compensated.



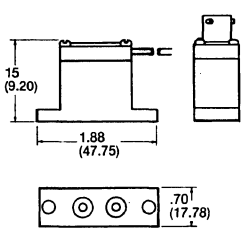
SERIES 210-60 AND 216-65



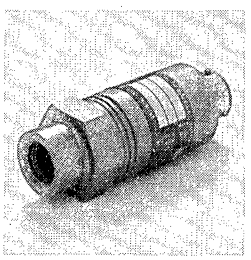
Series 210-60 and 210-65: ±500 to ±10,000 PSI. This is a full line differential pressure transducer designed for hydraulic systems. (Available in an all-welded, all-stainless steel version for corrosive media).

These transducers are unique because of their small size. The units have two separate sensing elements to measure the pressure at the input ports. Each sensor has two strain gage legs. These two sensors are connected to provide a fully balanced bridge. This sensing method provides an output directly proportional to the pressure difference at the two ports.

The series 210-60 is temperature compensated while the lower cost 210-65 is non-compensated. The 210-65 is particularly suited to rate derivation.



SERIES 212 ISOLATED



Series 212 Isolated: 0-10 through 0-10,000 PSI. When you need input to output isolation for system flexibility.

The Series 212 Isolated is a rugged, lightweight, all stainless steel, welded pressure transducer. It's tough enough to withstand harsh industrial environments. It's an easy transducer to install and features input/output isolation which decouples any interplay between power and signal, allowing flexibility in signal and power grounding connections. This also protects the transducer against output short circuits.

Output is 0 to 5 volts and the series is available in 18 different pressure ranges for incremental coverage of the full pressure spectrum.

Series		Application	Linear Range, Inches
AC	HR	General Purpose	±0.050 to ±10.0
	MP	Hostile Environments, Ruggedized Housing	±0.050 to ±10.0
	MHR	Small Size	±0.005 to ±1.0
	HPA	Hostile Environments (Hermetically Sealed)	±0.050 to ±10.0
	HCA		±0.050 to ±10.0
	E	Low-Cost	±0.10 to ±10.0
DC	DC-D	Shock and Vibration	±0.050 to ±10.0
	HCD	Hostile Environments (Hermetically Sealed)	±0.050 to ±10.0
	HPD		±0.050 to ±10.0
	HR-DC	Low-Cost	±0.050 to ±5.0

Linear Variable Differential Transformers

Schaevitz precision LVDTs incorporate many features not available in other transducer types. Features like frictionless measurement, infinite resolution, separated coil and core, state-of-the-art materials, infinite mechanical life, and extremely stable and repeatable null positions. As a result, they are well suited to a wide variety of applications including those in which high performance, low cost, long life, and adverse environments are of prime importance. Displacement ranges are from ±0.005 inch to ±25 inches. Typical linearities are ±0.25 percent of full range output.

Schaevitz AC operated LVDTs can be used with practically any type of LVDT signal-conditioning instrumentation and readout equipment. The operating temperature range of most standard AC LVDTs is −65° F to 300° F. Economy units operate from −65° F to 200° F.

DC LVDTs contain built in solid state circuitry. They accept DC inputs and produce DC outputs to operate meters, recorders, and control instrumentation. The operating temperature range of these units is −65° F to 200° F.

Displacement Transducers

Series	Application	Linear Range, Inches
XS-A	Large Bore, Small Core	±0.250 to ±5.0
XS-B	Subminiature	±0.005 to ±0.250
XS-C	Pressure Sealed (to 4500 psi)	±0.050 to ±1.0
XS-D	Large Displacement, Limited Size	±1.0 to ±25.0
XS-Z	Cryogenic (to −450°F)	±0.10 to ±2.0
XS-ZT	High-Temperature (to 1100°F)	±0.10 to ±2.0
XS-ZTR	Radiation Resistant	±0.10 to ±2.0
PT	Proximity (Non-contact Measurement)	±0.005 to ±0.050 (inches gap)
VT-Z	Linear Velocity (Dynamic Measurement)	±0.5 to ±20.0 (inches travel)

Special LVDTs

Schaevitz displacement transducers are available from stock for hard-to-measure applications. Typical applications include high pressure operation, and measurements involving extreme thermal and radioactive environments. They are characterized by distinctive configurations and incorporate special materials to enhance the reliability under the conditions encountered.

Series	Application	Range, Degrees
R30A	AC Operation	40°
R36A	AC Operation	40°
R30D	DC Operation	40°

Rotary Variable Differential Transformers

A counterpart of the LVDT, the Schaevitz RVDT is an angular-position transducer designed to measure angular displacement up to ±60 degrees. The shafts of these RVDTs are supported on precision bearings and are capable of continuous rotation.

RVDTs typically have a linearity of ±0.50 percent of full range. The operating temperature range of AC units is −65° F to 300° F; of DC units, −65° F to 200° F.

Dimensional Gaging Transducers

Series		Application	Gaging Range, Inches
AC	PCA-100	Precision	±0.020 to ±1.0
AC	PCA-200	Ultra-Precision	±0.005 to ±0.1
AC	GPA/GCA	Precision (Hermetically Sealed LVDT)	±0.050 to ±1.0
DC	GPD/GCD	Precision (Hermetically Sealed LVDT)	±0.050 to ±1.0

Schaevitz gage heads permit measurements that are otherwise difficult and often impossible to obtain even with very precise mechanical measuring devices.

LVDT Gage Heads

The PCA-100 Series comprise low-cost precision gage heads designed for production-line and laboratory measurements as well as OEM applications. The units offer linearities of ±0.25 percent of full range and are capable of repeating measurements to 50 millionths of an inch. The series includes units designed for use in adverse environments and extra-short gage heads for applications in which space is limited.

The PCA-200 Series are ultra-precise gage heads with available linearities up to ±0.05 percent of full range and repeatabilities up to 4 millionths of an inch. The units are available with either spring-actuated or air-actuated plungers.

The G Series precision gage heads are designed for AC or DC operation with hermetically sealed LVDTs. Typically used in applications where low cost and ease of installation are paramount considerations, typical linearity is ±0.25 percent of full range and repeatability is 25 millionths of an inch.

Series		Gaging Range, Inches
PPA	Non-contact Measurement, Thickness Variations	±0.050 to ±1.0
PPD		±0.050 to ±1.0

Non-contacting LVDT Gage Heads

Schaevitz non-contacting gage heads accurately measure variations in thickness of metal, plastic, paper, film and other non-porous materials without marring or tearing. These units can measure thickness variations to ±1 inch and resolve changes in thickness down to 5 millionths on an inch.

All Schaevitz non-contacting gage heads can be furnished with special nozzles for unusual applications.

Series		Gaging Range, Inches
ABG	Superb Repeatability	±0.02

Air Bearing Gage Heads

The Schaevitz ABG Series gage heads combine an LVDT and air-bearing structure which provides virtually friction-free operation. Linearity is ±0.25 percent of full range, and repeatability is 2 millionths of an inch.

The Name in Transducer Technology

Transducers to Measure Slope, Tilt, Angle

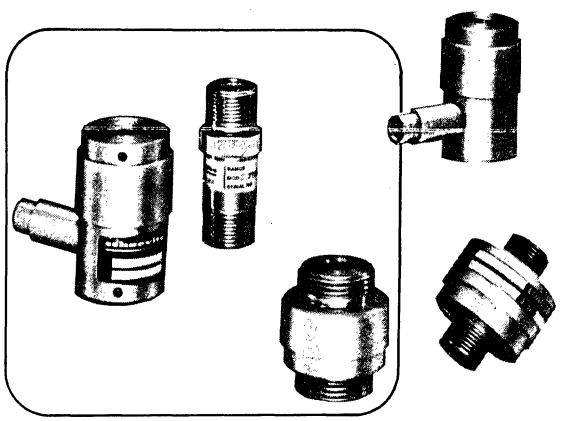
Model	Application	Measurement Range, Degrees
LSO	General Level or Angle Measurement	±1° to ±90°
LSV	Tilt Measurement (Horizontal Bore Holes)	±1° to ±90°
LSR	Tilt Measurement (Limited Spaces)	±1° to ±90°
LSF	X, Y Tilt Meter (Bore Holes)	±1° to ±90°

Inclinometers

Schaevitz inclinometers are extremely sensitive transducers that measure horizontal angle or vertical deviation with virtually infinite resolution. They are ideal for a variety of applications including setting the tilt of road grading and paving machines, leveling ships, barges, and pipelines, mapping bore holes, aligning boring equipment, and improving the accuracy of mechanical scales.

These self-contained DC-powered units respond to changes of slope as small as 0.000006 in./ft. and changes in angle as small as 0.1 second of arc. The operating temperature range is −65° F to 200° F.

A wide variety of options and external packages are available.



Weight and Force Transducers

FTA/FTD Series	Application	Measurement Range
U	General Purpose, Tension or Compression	100 to 1,000 lb.
G	Tension or Compression	10 to 10,000 gm
T	Tension	20 to 1,000 lb.

Force Transducers

Schaevitz FT Series force transducers (load cells) are compact, rugged units that permit accurate measurement of tensile or compressive forces ranging from 10 gm to 1,000 lb full scale. Various end adapters and load fittings are available. The operating temperature range for the FTA Series is −65° F to 200° F, and FTD Series is 25° F to 140° F.

The Name in Transducer Technology

Pressure Transducers

Series	Application	Full Scale Pressure, psi
P500	Low Pressure	1.5 to 5 psi
P700	High Accuracy	10 to 10,000 psi
P710	Highest Accuracy	10 to 10,000 psi
P720	General Industrial	10 to 10,000 psi
P740	High Level Output	10 to 10,000 psi
P750	Unregulated 12VDC Input	10 to 10,000 psi
P760	Unregulated 24VDC Input	10 to 10,000 psi
PT780	2 Wire Current Output	10 to 10,000 psi
P790	±15VDC Input	10 to 10,000 psi
P1100	Unidirectional Differential Pressure	10 to 500 psid
P2000		1.5 to 5 psid
P2100	Differential Pressure	10 to 3500 psid
P2500	General Purpose	500 to 10,000 psi
P3000	General Purpose, Low Pressure (DC operated)	0- 5 to 0-200 inches of water 15-100 psi

Strain Gage Pressure Transducers

Schaevitz offers a complete line of diaphragm-type high reliability, high performance, strain-gage pressure transducers. These units feature welded stainless-steel construction and incorporate positive overload stops to protect the diaphragm from overpressure. They can be furnished to measure either gage or absolute pressure up to 10,000 psi. Units are also available to measure low differential pressure at high line pressure. The series includes pressure transmitters for process control applications.

LVDT Pressure Transducers

LVDT-type Schaevitz pressure transducers are designed to measure very low pressure of a variety of liquids and gases. They are available to measure either gage, absolute, or differential pressure down to 5 inches of water pressure.

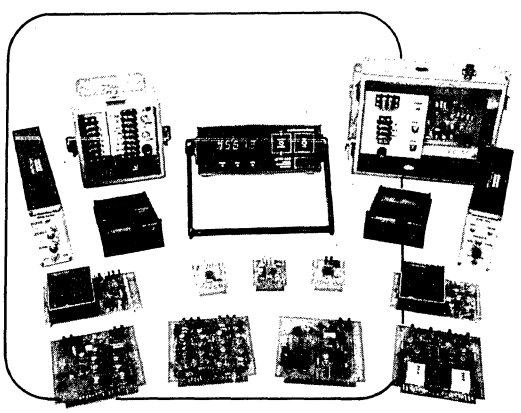
Transducers to Measure Acceleration

Series		Application	Measurement Range
Linear	LSB	General Purpose	0.25 to 50
	LSM	Miniaturized	0.25 to 50
	LSQ	Avionics	0.25 to 10 g
	LSX		0.25 to 50 g
Angular	ASB	General Purpose	50 to 1500 rad/sec^2
	ASM	Miniaturized	50 to 1500 rad/sec^2

Linear and Angular Accelerometers

Schaevitz servo accelerometers are closed-loop force-balance transducers that combine rugged acceleration sensors with solid state circuitry in a wide variety of configurations. These devices satisfy the requirements of applications involving acceleration measurement, inertial guidance, aircraft control and stabilization, railroad vibration analysis, and other commercial applications.

Models are available to measure linear acceleration in ranges from ±0.25 g to ±50 g, with linearities of 0.05 percent of full scale. Often models measure angular acceleration in ranges from ±50 rad/sec^2 to ±1500 rad/sec^2 with linearities of 0.1 percent of full scale.



Signal Conditioning and Readout Devices

Schaevitz produces a broad line of complementary signal conditioners and readouts for use with LVDTs, RVDTs, and strain gage transducers. This line includes modular signal conditioners for OEM users, bench or rack-mounted signal conditioners for laboratory or industrial users, complete digital transducer readouts for high accuracy and readability, and custom-designed signal conditioning systems based on a family of proprietary plug-in card modules.

schaevitz

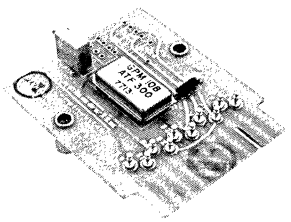
The Name in Transducer Technology

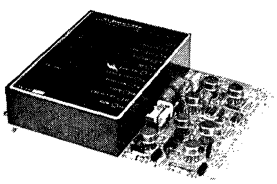
Signal Conditioning and Readout Devices



OEM Modules

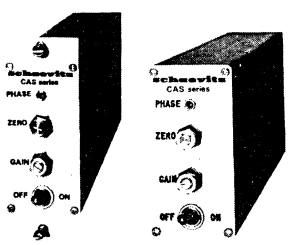
Basic DC Modules

The SMS/GPM modules are very basic LVDT signal conditioners powered from ±15VDC. They utilize the same hybrid microcircuit as the Schaevitz DC-LVDTs and can produce a ±10VDC output. The modules are supplied with a pc board mounted gain control and has provisions for a board-mounted zero control.



Line Powered Modules

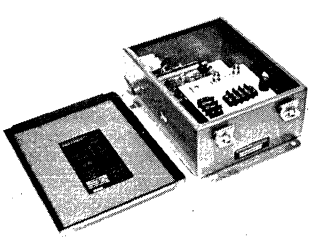
The LPM-210 modules are economical signal conditioners designed primarily for OEM applications. Operating from conventional power lines, they supply excitation to an LVDT, and then amplify its output. Gain and zero controls are usually supplied by the user. Standard full-scale output is ±10VDC, but a 4-20 mA current output version is available. Also available is a LPM-700 module to power strain gage transducers.



Signal Conditioners

CAS Types

CAS signal conditioners are premium performance carrier amplifier-type instruments for all types of laboratory and industrial applications. They feature high stability and high gain with low noise and low output ripple. This makes them particularly suitable for operation with low output LVDTs. The nominal full scale output of a CAS is ±10VDC. Models are available with either bench top or rack-mounting enclosures, but all models have front panel mounted gain, zero, and phase adjustments.



IEM/CAS Types

The IEM/CAS is a carrier amplifier type signal conditioner packaged in a NEMA-12 enclosure. It is especially designed for users in the process industries, featuring the stability and performance of the CAS series, but with a 4-20 mA current output.

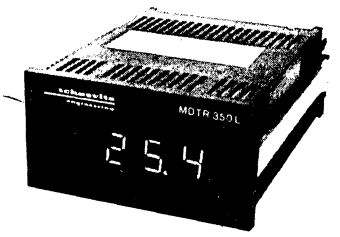
The Name in Transducer Technology

Signal Conditioning and Readout Devices

Self-Contained Digital Readouts

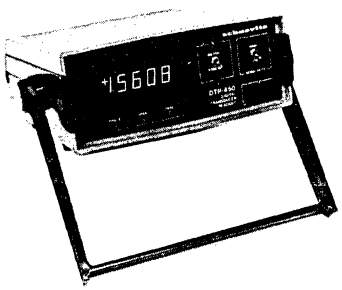
MDTR-350L

The MDTR-350L is a self-contained, line powered LVDT signal conditioner with a 3½ digit readout. Full scale display is ±1999, and the decimal point is changeable in the field. Gain and zero adjustments are provided, but no phase adjustment is necessary. The unit is designed for panel mounting in a standard DIN cut-out, and has parallel BCD output available at the rear connector. Also available is the MDTR-3505 for use with strain gage transducers.



DTR-450

The DTR-450 is a fully self contained, power line operated, high stability LVDT signal conditioner with a 4½ digit readout. Full scale display is ±19999. It is an extremely versatile instrument that features a front panel switch for 10 times range expansion and another to change the display from prescaled English units to prescaled metric units. The scaling for each set of units and the decimal point locations can be preset in the field. The DTR-450 is enclosed in an electrostatically shielded case with a handle that functions as a tilting stand. Other features include RFI shielded power input and simultaneous BCD output and 0-10VDC analog output.



Modular Systems

PCB System

A PCB system is built around the concept of a single power supply and card cage combined with a family of versatile plug-in card modules for signal conditioning, signal processing, and control functions. The result is a cost-effective way to assemble a custom designed system of any number of channels. The system can be designed to display or record measurements made with transducers and can be used to control processes monitored by the transducers. Interface with a computer is even possible. Among the plug-in card functions available are:

- Carrier excitation
- Amplifier/demodulator
- High-low limit
- BCD (TTL logic).
- Sum/difference
- Auto-zero
- Peak signal-hold
- Multiplexer
- Operational amplifier
- Current output
- Programmable relay
- V/f or f/V

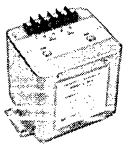
EXCELTRONIC™ PHASE ANGLE TRANSDUCER



DESCRIPTION

These transducers measure the phase angle between two voltage inputs (6314) or between one voltage and one current input (6330). All models have a ±180° phase detector preventing ambiguous readings when the input goes beyond full scale. The unique circuits use both zero-crossing times to measure the angle. They use phase locked loops to reduce the effects of noise interference and harmonics on the inputs.

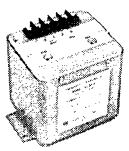
The units can be supplied for full scale ranges of ±45° up to ±180° and with outputs of ±1 mA, 0-1 mA, 1-5 mA or 4-20 mA.

SPECIFICATIONS

Full Scale Range: ±45° to ±180°. **Phase Angle Range without Ambiguous Readings:** ±180°. **Accuracy at 25°C, Normal Condition:** ±1%. **Additional Error Between −20°C and +60°C:** ±0.5°. **Potential Input(s):** 95-1135 VAC (nominal). **Overload, continuous:** 150V at 120V. **Burden:** 4 VA at 120V. **Current Input:** 0.5 to 5A (nominal). **Overload, continuous:** 10A. **Overload, 1/2 sec./hr:** 400A. **Frequency Range:** 60 Hz. **Adjustment (non-interacting), Zero:** ±3°. **Span:** ±5°. **Ripple:** 1% of maximum output (Peak). **Response Time:** 0.4 seconds to 99% of final value. **Protection Isolation:** Input/Output/Case. **Dielectric Test:** 1500V rms for 1 minute. **Surge Withstand:** Proposed IEEE SWC Test. **Outputs:** 0- ±1.0 mA into 0-10 kilohms. **Option — PA6:** 1-5 mA into 0-2.4 kilohms. **Option — PA7:** 4-20 mA into 0-1.2 kilohms. **For Model 6314 or 6330 add following suffix to complete model number:**

— 45	±45°, PF 1 to 0.7071
— 60	±60°, PF 1 to 0.5
— 75	±75°, PF 1 to 0.2588
— 180	±180°

EXCELTRONIC™ FREQUENCY TRANSDUCERS MODELS 6281B, 6283B, 6284B



DESCRIPTION

These transducers develop a DC output signal which is proportional to input frequency, have an expanded scale output, and feature constant current output. This means, for a given input, no adjustment is necessary to compensate for various output signal loop characteristics.

SPECIFICATIONS

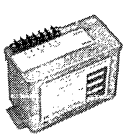
EXCELTRONIC™ POWER TRANSDUCER "P SERIES" A6 1-5 ma, A7 4-20 ma, A8 10-50 ma



DESCRIPTION

Scientific Columbus has over 60 high output constant current transducers available for your selection. These transducers measure voltage, current, watts, vars, frequency and power factor with the popular outputs compatible with control equipment.

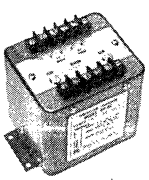
SPECIFICATIONS COMMON TO WATT AND VAR MODELS

Nominal Voltage Input: 120V. **Voltage Range:** 0-135V. **Permissible Voltage Overload:** 150V. **Voltage Burden (per Element):** 0.05 VA at 120V. **Nominal Current Input:** 5A. **Permissible Current Overload:** 10A cont., 250A for 1 sec. **Current Burden (per Element):** 0.10 VA at 5A. **External Power Required:** 100-130V, 50 Hz-500 Hz 12 VA. **Dielectric Test:** 1500 VRMS. **Frequency Range Watts:** 50-60 Hz. **Frequency Range Vars:** 60 Hz. **Power Factor Range:** Any. **Temperature Range:** 0-50°C. **Temp. Effects in Accuracy:** ±0.0075%/°C. **Accuracy/Linearity @ 25°C:** ±0.25%. **AC Component P to P:** 0.5% max. **Response Time:** 1 sec. max.

SPECIFICATIONS COMMON TO VOLT, CURRENT, POWER FACTOR, FREQUENCY, AND ISOLATION TRANSDUCERS

Nominal Voltage Input: 120V. **Permissible Voltage Overload:** 150V. **Voltage Burdens:** 3 VA max. **Current Circuits Nominal Input:** 5A. **Permissible Current Overload:** 10A Cont., 250 for 1 sec. **Current Circuit Burdens:** 3 VA max. **External Power Required:** 100-130V, 50 Hz-500 Hz 12 VA. **Dielectric Tests (Isolation unit):** 1500 VRMS. **Input Terminals:** 4000 VDC. **Temperature Range:** 0-50°C. **Temp. Effects on Accuracy:** ±1%. **Accuracy/Linearity @ 25°C:** ±0.5%. **AC Compinent P to P:** 0.5% max. **Response Time:** 1 sec. max.

EXCELTRONIC™ TEMPERATURE TRANSDUCER SERIES 9015N, 9016P, 9019C



DESCRIPTION

These transducers have true constant current output of 0-1 MA that will simplify your own calibrating or scaling networks, as well as allow-inging telemetering over long distances without line drop error.

SPECIFICATIONS

Constant Current Output: 0-1 mA for Full Range Input. **Load Resistance Range:** Any Load Between 0-10K Ohms. **Temperature Range:** −4°F to 140°F. **Ripple:** 1% RO (Peak). **Connections:** See Model 9015-49F, Model 9016 & 9019-49G. **Adjustments Span:** ±10%. **Zero:** ±3%. **Response Time:** <50 Milliseconds. **Dielectric:** 1500 VRMS @ 60 Hz for 1 Min. **Power Requirement:** 110 VAC ±20 VAC, 50 to 450 Hz, 3.5 Watts Max. **Temperature Influence on Accuracy (−4°F to +140°F):** ±.015%/°F (from 77°F). **Open Circuit Voltage:** 16 VDC. **Dimensions:** See Style II-Models 9016 & 9019, Style III-Model 9015.

Basic Model	RTD Type	Suggested Sensor Resistance	Temp. Span	Temp. Range	Max. Sensor Current
9015N	Nickel-Iron	676Ω @ 77°F	50°F or 150°F	−200°F to 500°F	< 3 Milliamps
9016P	Platinum	100Ω @ 32°F	150°F or 300°F	−320°F to 1000°F	< 5 Milliamps
9019C	Copper	10.0Ω @ 77°F	150°F or 300°F	−100°F to 300°F	<50 Milliamps

CALIBRATOR

PORTABLE TRANSDUCER MODEL 6444

- 40% Lighter • 40% Smaller • All Digital
- Replaces the 1369C • Watts • Vars • Amps
- Volts

SPECIFICATIONS

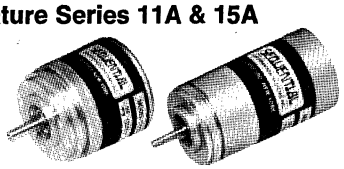
Function: AC watt, var, current and voltage transducer tester and calibrator. **Ranges:** 0-150 VRMS, 0-5A, 0-10 ARMS, Avg. Sensing. 0-750/0-1500W, 0-750/0-1500 Var. **Voltage Output:** VA rating 15 VA. **Current Output:** VA rating. Hi Range: Hi-24 VA @ 1. PF, 22V @ 0.5 PF. **Lo Range:** Lo-6 VA @ 1.0 PF., 2.4 VA @ 0.5 PF. **Load Power Factor:** Unity and 0.5 lag (approx.) **Transducer Signal Load:** 1 ohm to 100K ohms and infinity, selected by thumbwheel digital readout switches. **Standard Output Signal:** 0-10 volts dc for zero to full scale of test quantity (V, A, W, var). **Meters, all meters are 3½ digit liquid crystal display (LCD):** Volts 0-150, Amperes 0-5/0-10, Watts/Vars 0-750/0-1500, Error −20% - 0 - +20%. **Accuracy of Internal Std. Transducers:** ±0.1%. **Accuracy (Digital Indicating Meters):** Volt, Amp & Watt/Var indicators, ±0.15% of f.s. ±1 digit. **Accuracy (Standard Output):** ±0.1% (maximum). **Temperature Range:** +25°C ±10°. **Power to Operate Unit:** 120V ±10%, 60 Hz, Approx. 130 VA. **Terminations:** Five-way binding posts are mounted on the front panel of the instrument. Power receptacle is on the rear of the case. **Accessories:** No accessories are required for complete functional testing of transducer being checked. **Packaging:** Woodformica portable instrument case with carrying handle. **Dimensions:** 13″ high x 22″ wide x 9″ high (330 x 560 x 230 mm). **Weight:** 45 lbs. (20.4 kg).

SEQUENTIAL
OPTICAL ENCODERS

Sequential offers virtually every type of Optical Encoder, both self-contained and modular. Incremental and absolute units are available in industrial, instrument, high resolution and economy packages. PC type Encoders provide direct data input to Programmable Controllers and Process Computers without special interface logic. All models include more than 150 resolutions in stock with a wide variety of mechanical and electrical options.

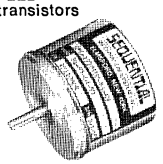
INCREMENTAL ENCODERS

Miniature Series 11A & 15A



Size: 1.1″ dia x 2″ L (11A); 1.5″ dia x 1⅜″ L (15A)
Resolution: to 1024 cyc/rev (11A); to 2048 cyc/rev (15A)
Output Formats: Single Channel, 2-Channel in Quadrature, 2-Channel Quadrature plus Zero Index
Output Levels: TTL or C-MOS Compatible
Illumination Source: Single LED
Detectors: Phototransistors

Low Cost Series 25L

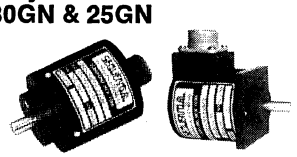


Size: 2.62″ dia x 2″ L
Resolution: to 1270 cyc/rev
Output Formats: Single Channel, 2-Channels in Quadrature, 2-Channel Quadrature plus Zero Index
Output Levels: TTL, C-MOS Compatible
Illumination Source: Single LED
Detectors: Phototransistors

High Accuracy & Resolution Series 25G

Size: 2.625″ dia x L (depends on output)
Resolution: to 4,000 cyc/rev (without Interpolation) to 20,000 cyc/rev (with Interpolation)
Output Format: Single Channel, 2-Channels in Quadrature, 2-Channels Quadrature plus Zero Index, Direction-sensing with 1X, 2X, 4X Multiplication Logic
Quadrature Accuracy: ±22½°
Frequency Response: 50 KHz standard, 100 KHz available
Illumination Source: Single LED or Lamp
Detectors: Phototransistors or Photocells
Output Levels: TTL, C-MOS, HTL, Differential Line Driver and Complementary Outputs, Open Collector (30 vdc, 40 ma, max)

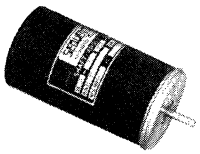
Heavy Duty NEMA 13 Series 30GN & 25GN



Size: 2.5″ dia x 2.5″ L (25GN); 3″ dia x 3″ L (30GN)
Mounting: Servo, Face (Bolt Circle) or Flange
Resolution: to 2540 cyc/rev
Output Format/Levels: Same as 25G
Shaft Dia: ⅜″ (25GN); ½″ (30GN)
Radial Shaft Loading: 35 lbs (25GN); 40 lbs (30GN)
Shaft Seal: Buna N rubber with garter spring
Illumination Source: Single LED
Detectors: Phototransistors

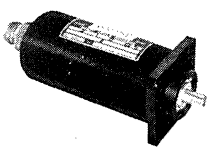
ABSOLUTE ENCODERS

Series 25H



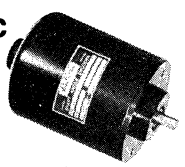
Size: 2.625″ dia x L (depends on output)
Resolution: to 13 cycle or Natural Binary, to 3599 Binary Coded Decimal
Output Codes: CB, NB, CBCD & BCD standard
Output Levels: TTL, C-MOS, Open Collector (30 vdc, 40 ma, max)
Output Options: Gated, Serial, Differential
Illumination Source: Single LED or Lamp
Detectors: Phototransistors or Photocells

Extra Heavy Duty NEMA 13 Series 30HR Enclosure



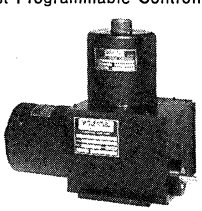
Configuration: (See Note) Input Shaft connected to any Series 25 Encoder through a flexible coupling
Size: 3″ dia x L (depends on options)
Shaft Dia: to ⅝″ (uses ⅝″ I.D. roller bearings)
Shaft Loading: 400 lbs radial, 200 lbs axial
Shaft Seal: Buna N rubber with garter spring
Note: For use with any Series 25 Absolute or Incremental Encoder.

NEMA 13 Programmable Controller Series 40HDN/PC



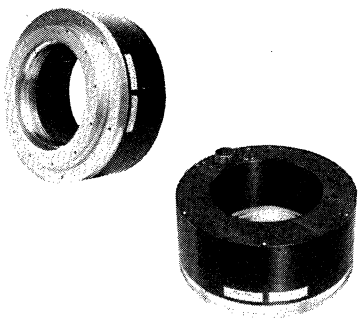
Size: 4″ dia x 9/16″ L
Resolution: 359 BCD, 999 BCD, 2^{10} NB
Output Levels: TTL, C-MOS, Open Collector (30 vdc, 40 ma, max)
Shaft Dia: ½″
Radial Shaft Loading: 40 lbs
Shaft Seal: Buna N rubber with garter spring
Illumination Source: Single LED
Detectors: Phototransistors
Note: Data Hold Input, Data Ready Output, Direction Input Select and Multiplex Control Input Signals for direct hand-shaking capability with most Programmable Controllers.

NEMA 13 Multi-Turn Encoders



Configuration: Both Encoders and Output Shaft isolated from gear train by flexible couplings
Resolution: 1,000 bits/turn x over 140 turns (140,000 total bits)
Output Code: BCD
Output Level: TTL or Open Collector (30 vdc, 40 ma, max)
Note: Data-Hold, Data-Ready signals for direct hand-shaking capability with most Programmable Controllers or Process Computers.

HI-RES ENCODERS



Sequential offers a full line of absolute encoders with resolutions to 21 bits. Package sizes range from 3.5″ to 12″ dia. Hollow-shaft models are available with thru-holes to 7″. Sequential Encoders offer the highest resolution and accuracy available today!

These encoders have been used by the military, NASA, other governmental agencies and industrial companies in a variety of applications including tracking mounts, radar and telemetry pedestals and measuring equipment.

Many units have been fully qualified for operation aboard military aircraft, ships, in space and in environments from desert to ocean. A full complement of options and accessories is available, including electrical zeroing, on-line automatic checkout, redundancy with automatic switchover, displays and readouts, flexible couplings and test sets.

On-target sensors for position and speed control.

Choosing the right up-front sensor can make a big difference in position- and speed-control system requirements.

At TSI, if you need a non-contact pickup, with or without logic signal conditioning, with or without zero-speed and/or direction output, its performance will be strictly as specified, and its cost-saving advantages will be welcome news.

Pickups, proximity sensors and switches, LVDTs, and velocity transducers—all are manufactured in their entirety at TSI. Select from hundreds of standard models and custom designs.

Sensor Type	Variable-Reluctance Magnetic Pickups	DIGIMAG	DIGITRAC®	BITRAC™
Features	Non-contact, high frequency output capability, several output/resolution packages. High environmental adaptability.	Digital output, insensitive over a range of, and to variations in supply voltage and air-gap distance. Non-contact.	Zero-speed output, digital, good noise immunity, magnetoresistive sensing, non-contact.	Directional and zero-speed digital output from one differential magnetoresistive sensor. High noise immunity, easy installation, non-contact.

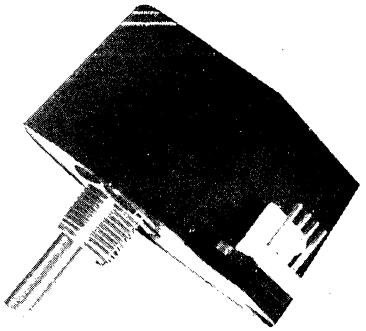
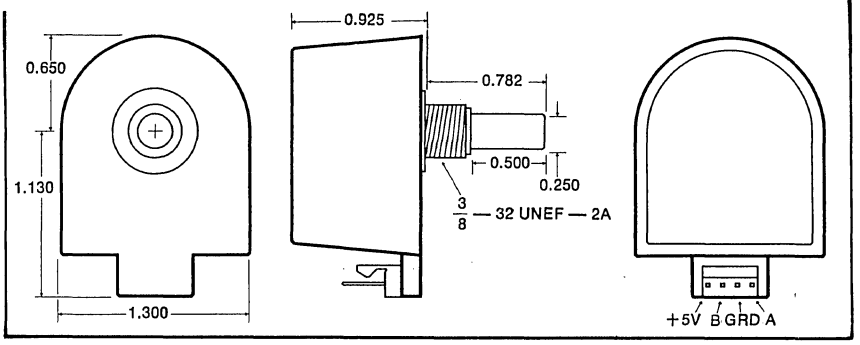
SOFTPOT DATA





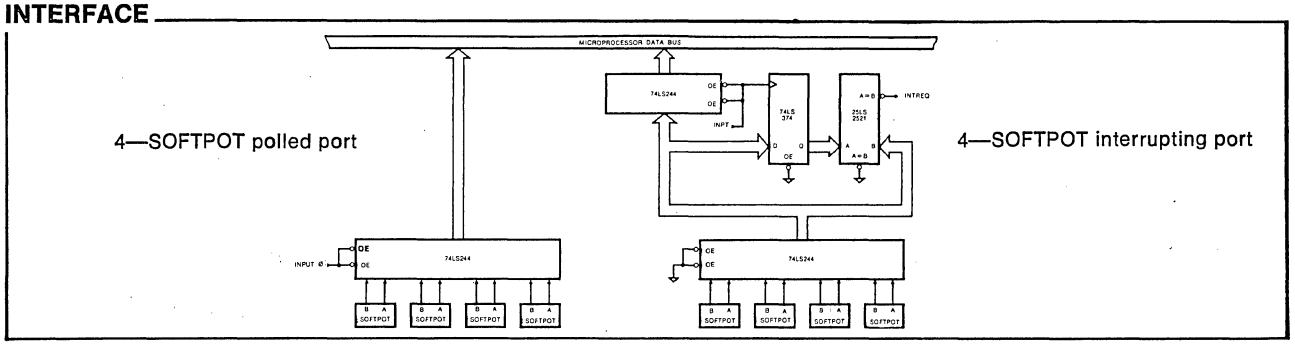
DESCRIPTION

The SOFTPOT is a front panel optical incremental encoder which converts mechanical action directly to digital output. Its low cost has made software programmable performance practical for new applications. Shaft tension provides the feel of a potentiometer but there are no stops. Since the SOFTPOT is an incremental device the absolute value of the controlled parameter may be maintained in memory by your microprocessor providing:

- Software presetable parameters
- Software definable limits
- Software programmable interaction

The two channel outputs are quadrature phase encoded to provide a resolution of 4 quadrants per cycle and 16 cycles per revolution yielding a code change every 5.6 degrees or 64 quadrants per turn. LED light sources assure low power consumption and a long reliable life. One external 74LS244 will interface four SOFTPOTS to standard TTL.

INTERFACE



ELECTRICAL SPECIFICATIONS

PARAMETER	MIN	NOM	MAX	UNITS	NOTE
Supply Voltage	4.75	5.0	5.25	Volts	
Supply Current		22	30	MA	
VoutH	3.5	5.0	5.25	Volts	2
VoutL		0.15	0.4	Volts	2
Iout (Vout=.5v)	0.5	2.0		MA	
Iout Short		8	18	MA	
Symmetry	150	180	210	Degrees	3, 4
Quadrature	60	90	120	Degrees	3, 5

NOTES:
1. A 74LS244 is recommended as the interface to TTL.
2. At 74LS244 input
3. At 74LS244 output
4. Symmetry is a measure of the relationship between (X) and (Y) In electrical degrees.
5. Quadrature is specified by (Z) and is the phase lag or lead between channels A and B in electrical degrees.
6. Channel B leads channel A for clockwise rotation.

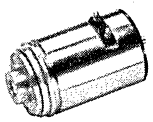
Linear Motion
Electrical stroke lengths 1" to 60".
Linearity or conformity ±0.2% to 0.01%.
Resistance range 250Ω/in to 250KΩ/in.

CLUTCHES AND BRAKES (electromagnetic)



hundreds of models and sizes available from stock.

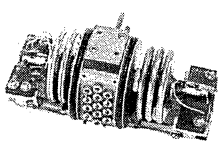
Precision Instrument Type
Sizes 5, 8, 11, 13, 15, and 18.
Standard length and wafer types. Spring and magnetic.
Meet MIL-E-5272C. Zero backlash.
Torque 5 to 150 oz. in. Response time 5 to 142 ms.

Industrial Types — open frame
Sizes 8, 12, 17, 22, 26. Torque to 75 in. lb.
Response time 6-30 ms at rated voltage.

Industrial Types — enclosed frame
Hybrid or special units designed for particular applications when MIL-SPECS and close tolerances are not essential, but where having a complete "self-contained" unit is desirable: cassette tape decks, analog devices actuators, etc.

Fail Safe
Braking action occurs 10 ms after coil is de-energized or power fails. Sizes 8, 17, 30, and 45.
Torque up to 50 in. lb. Zero backlash. Adjustable to compensate for wear.

PRESSURE TRANSDUCERS potentiometer type,



featuring infinite resolution, long life, and high reliability through the use of conductive film resistance elements, multiple wipers, and direct coupling of pressure sensing element to potentiometer wipers.

Pressure ranges from 0.1 to 10,000 psi in gage, absolute and differential types. Also available with high overpressure capability.

Linearity to ±0.3%. Air speed, altitude and low cost types available.

VERNITECH

MOTORS

Over 1500 Standard Designs or Custom Designed to your requirements.

Synchronous — for laser scanning
Sizes 5, 8, 11, 15, 18, 20, 25, 35.
Speeds 100 to 48,000 rpm.
5 through 1600 Hz. 2, 4, 8, 12 poles.

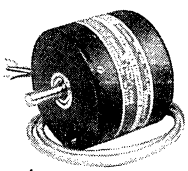
Servo
Viscous damped — sizes 8, 10, 11, 15, 18.
Speeds 3000 to 10,000 rpm.
Inertially damped — sizes 8, 11, 15, 18.
Speeds 3000 to 9500 rpm.

Stepper
Sizes 5, 8, 11, 15. Stepping angles 7.5°, 15°, 45°, 90°.
Stepping rates 100, 110, 125, 130, 175, 180, 225, 240, 260, 400, 725, 800, 1000 pps.

Precision Motor Generators Sizes 8, 10, 11, 15, 18, 23.

Integrating and Computer Motor Tachometers
Sizes 8, 10, 11, 15, 18, 23.

SHAFT ANGLE ENCODERS



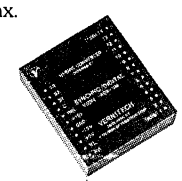
featuring precision chrome on glass discs for highest accuracy.

Optical Incremental
VOE 11 — Dia. 1.062", L. 1.80". To 1024 pulses
VOE 015 — Dia. 1.510", L. 0.88". To 1024 pulses (modular)
VOE M15 "Dial Coder" — panel mounted, 1.500" dia., L. 1.08" 127-256 pulses
VOE 023 — Dia. 2.25", L. 80". To 1250 pulses (modular)
VOE 23 — Dia. 2.250", L. 1.875". To 1250 pulses (available sealed)
VOE L23 "Thrift-Line" Dia. 2.250" L. 1.875". To 600 pulses
VOE 25 — Dia. 2.500", L. 2.500". To 3000 pulses (available sealed)

Optical Absolute
VOE 23: Binary, Gray or BCD to 512 counts per turn. Counting speed: 3000 rpm.
VOE 30: Single or multi-turn; Binary, Gray or BCD. To 1024 counts per turn. Max count (2^{19}) in 512 turns. Counting Speed: 30KHz.

Contacting Absolute
Sizes 11, 18, 23, & 31. Binary, Gray, and BCD. Single or multi-turn. Max count (2^{19}) in 2048 turns. 64 to 1024 counts per turn. Operating speed 200 rpm max.

SYNCHRO CONVERTER MODULES



Tracking Synchro-to-Digital and Resolver-to-Digital Converters
Economy Series VSD/VRD. Precision Series VSDH/VRDH Compact, solid state, high performance converters employing type 11 servo loops for lag free tracking at rates to 3600°/sec. Resolution 10 bits, 12 bits, or 14 bits.

Digital-to-Synchro and Digital-to-Resolver Converters Series VDS/VDR: Accept shaft angle data in digital form for conversion to analog at accuracies up to ±4'.

Tracking Synchro-to-Linear DC Converter Module
Series VSDCH/VRDCH: Accept 3-wire synchro or 4-wire resolver input data, convert it to DC analog voltage proportional to synchro angle of input. Accuracy ±6' (typ.).

Tracking Angle Position Indicator
VNST-104: Tracking Synchro-to-Digital Converter, can also be used as a control element. Four decade 0.8" red LED display. Display accuracy ±6' arc (typical). Tracking rate 3600°/sec max. Parallel binary or BDC output. Self contained line operated power supply.

Custom designs available to your specifications.

VERNITECH, a division of Vernitron Corp., 300 Marcus Blvd., Deer Park, NY 11729 • 516-586-5100 • TWX 510-227-6089

WR VIBRATION TRANSDUCERS

Wilcoxon Research specializes in the development and manufacturing of high quality instrumentation for use in the vibration test and monitoring field. A wide range of vibration transducers and related accessories are offered to fulfill most laboratory and industrial applications. Electromagnetic and high frequency piezoelectric shakers are offered to excite structures for vibrational analysis. Experienced technical assistance is available to aid in instrument selection and application.

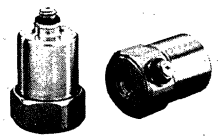
Internally Amplified Accelerometers

700 Series Accelerometer System

NEW

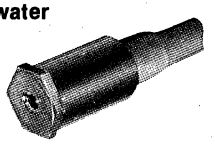
The New 700 Series Accelerometer System offers an array of internally amplified accelerometers, power supplies, post-amplifiers and vibration measurement kits. These are designed as interchangeable systems featuring ruggedness, ease of operation, virtually free from erroneous signals caused by conditions such as mechanical strain, mounting torque, thermal transients and cable motion. The extremely low noise floor and very wide measuring range are unparalleled features of the 700 Series.

720 Series



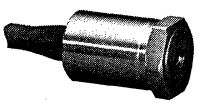
For general purpose vibration testing and monitoring. Low sensitivity to strain, torque, and thermal transients. Very low noise floor allows external velocity or displacement integration to low levels and low frequencies. Internal PIEZOFET® amplifier drives long cables. 10, 25 or 100 mV/g 1 to 10,000 Hz

740 Series Underwater Accelerometers



Designed for testing and monitoring of underwater structures. Geophysical cable is sealed into the transducer for operation to pressures greater than 1000 psi. Ultra low noise amplifier allows measurement to extremely low vibration levels. 10, 25 or 100 mV/g 1 to 10,000 Hz

760 Series Industrial Accelerometers

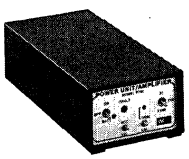


Designed to withstand the harsh environments found in industrial applications such as bearing, pump, turbine, and gear case monitoring. Rugged and shock protected for long term reliability. Special environmental and electrical isolation. 10, 25 or 100 mV/g 2 to 10,000 Hz

P700 Series Power Supplies & Amplifiers

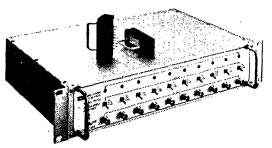
These units supply power to any of the 700 Series Accelerometers with integral amplifiers and allow operation directly into standard readout equipment. The new "smart" power supplies provide gain and monitor and signal to insure proper operation for increased measurement confidence.

Single Channel



- P702 Power Unit/Amplifier
- Power any 700 Series Accelerometer
- Gain trim to standardized sensitivity
- Overload/fault alarm — audible and visible
- Wide dynamic range
- Battery test light
- Amplifier gain of 1, 10, and 100 • Acceleration or velocity output
- Ultra low noise • Powered by 9V transistor batteries

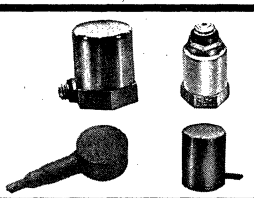
Multichannel Power Unit Racks



PR710 — Supplies power to ten 700 Series Accelerometers with low noise amplification of X1, X10 or X100. Fault indication warns of defective accelerometer or cabling.

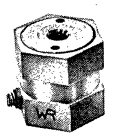
PR712 — Supplies power to twelve accelerometers and provides fault indication with no additional amplification.

High Impedance Accelerometers



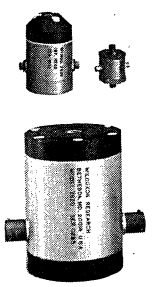
A variety of charge type (non-amplified) accelerometers are offered for use with external charge amplifiers. Charge type accelerometers have a wide dynamic range and high temperature capability. Low noise cables must be used. Modifications and special OEM units can be provided by our Custom Design Section. 1 pC/g to 10 V/g sensitivities

Force Gages



Piezoelectric force gages measure dynamic forces with high gage stiffness. Miniature and general purpose units are available. Low weight.

Impedance Heads



An impedance head combines a force gage and an accelerometer in a single unit. When driven by a shaker, this allows the measurement of force applied to the structure and the resulting motions.

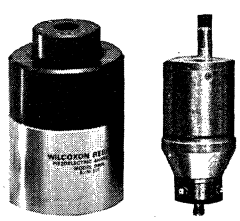
Electromagnetic Shakers

These small electromagnetic shakers are designed to attach to (or push against) a structure and generate a vibratory force. The mass reaction principle of operation allows the shakers to be mounted in any orientation. Available with built-in force gage and accelerometer (impedance head) for complete measurement capability.

Electromagnetic/Piezoelectric Shaker Combinations

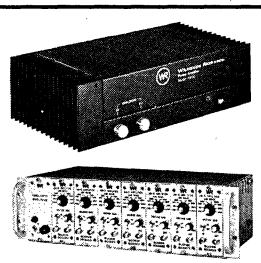
This new approach to structural excitation combines an electromagnetic shaker which drives at the lower frequencies and a piezoelectric (crystal) shaker which drives at high frequencies. The combinations are selected so that both shakers can be driven at the same time to cover a very wide frequency range.

Piezoelectric Shakers



Piezoelectric shakers are designed for high frequency structural excitation. A variety of models are available as mass-reaction force generators (F7, F8, F9) or in shake table configurations (D60, D125). Extremely high vibration levels may be attained with very low stray electromagnetic fields.

Signal Conditioners, Power Amplifiers & Accessories



Wilcoxon Research offers a selection of signal conditioners, shaker power amplifiers and accelerometer accessories to fully support our lines of transducers and shakers. This ensures system component compatibility from a single supplier.

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

abbott TRANSFORMERS

60 Hz Power Transformers

MODEL **6B**

SPECIFICATIONS

INPUT PRIMARY: 115 VAC standard. 230 VAC at 10% additional cost. Specify by suffixing "A" to model number. 115/230 VAC dual input at 10% additional cost. Specify by suffixing "B" to model number.

INPUT FREQUENCY: 50 to 400 Hz, 1 phase.

REGULATION: 15% max. from no load to full load (6% on units size 8 and larger).

SECONDARY VOLTAGE TOLERANCE: Within 5% of listed output voltage when measured at full load and 115 VAC input.

INSULATION TEST: 1500 VAC.

OPERATING TEMPERATURE: 80°C maximum ambient (70°C on units size 8 and larger).

APPROXIMATE EFFICIENCY: Ranges from 80% to 90%.

CONSTRUCTION: Commercial grade using Silicon Iron for core and heavy insulated synthetic film magnet wire with class "B" rating impregnated with a high quality insulating varnish having a class "H" rating. Other outputs and/or inputs available on request.

abbott TRANSFORMERS

60 Hz Transformers

MODEL **P**

SPECIFICATIONS

INPUT PRIMARY: 115 VAC, 60 Hz ±5 Hz, 1 phase.

REGULATION: 10% no load to full load.

SECONDARY VOLTAGE TOLERANCE: Within 3% of listed output voltage when measured at full load and 115 VAC input.

CONSTRUCTION: To MIL-T-27D, grade: 4 class: "S", Case: steel.

ENVIRONMENT: To operate in 95°C maximum ambient temperature. Encapsulated to meet MIL-STD-810C for vibration, shock, acceleration, sand, dust, humidity, saltspray, fungus, sunshine, rain, explosion, and altitude (to a vacuum). NOTE: For high altitude operation, encapsulate terminals.

INSULATION TEST: 1750 VAC.

SECONDARY: See output voltage and current of specific models listed. For 50 Hz operation, reduce secondary current by 10% of ratings listed. These units are capable of 400 Hz operation; however, see Abbott's distinct line of miniature 400 Hz transformers.

abbott TRANSFORMERS — 400 Hz Transformers — MODEL E

SPECIFICATIONS

Input Primary
115V, 400 Hz ±20 Hz, 1 phase

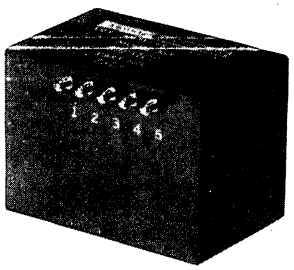
Regulation
10% no load to full load

Secondary Voltage Tolerance
Within 5% when measured at full load and 115 VAC input

Construction
To MIL-T-27D, grade 5, class: "S" Molded Diallyl Phthalate

Environment
Encapsulated to meet MIL-STD-810C, including vibration, ambient temperature ot 85°C, shock, sand, dust, humidity, saltspray, fungus, sunshine, rain, explosion, and altitude (to a vacuum).

Output Secondary
See voltage and current of specific models listed.



Other models are available. Contact our nearest office for complete information.

abbott TRANSFORMERS

400 Hz Power Toroid Transformers

MODELS TM TF

SPECIFICATIONS

INPUT PRIMARY: 115V, 400 Hz ±20 Hz, 1 phase for 230V operation add the suffix "A"

REGULATION: 5% or less, no load to full load

SECONDARY VOLTAGE TOLERANCE: Within 5% when measured at full load and 115 VAC input

INSULATION TEST: 1000 VAC

OPERATING TEMPERATURE: MODEL TM 90°C Maximum ambient/MODEL TF 80°C Maximum ambient

APPROXIMATE EFFICIENCY: 90% to 95%

OUTPUT SECONDARY: See voltage and current of specific models listed

CONSTRUCTION: MODEL TF — Open frame, Industrial Grade with Teflon leads 6" long MODEL TM — to meet MIL-T-27D, Grade 5, Class S, MIL-type Designation TF5S03ZZ

OPTIONS: "A" option is for 230V input primary. Add suffix "A" to model number (i.e. TF10-1A). "C" option is for center tapped output. Add suffix "C" to model number (i.e. TF10-1C)

abbott TRANSFORMERS

400 Hz 3 Ø Power Transformers

MODEL **4D**

SPECIFICATIONS

INPUT PRIMARY:
WYE: (4 wire) Line to Common 115 VAC
WYE: (3 wire) Line to Line 200 VAC
DELTA: (3 wire) Line to Line 115 VAC (see option "A")
DELTA: (3 wire) Line to Line 200 VAC (see option "B")

INPUT FREQUENCY: 400 Hz ±20 Hz.

OUTPUT: See specific models listed.

OUTPUT VOLTAGE TOLERANCE: Within 5% when measured at full load and nominal VAC input.

REGULATION: 10% no load to full load.

INSULATION TEST: 1500 VRMS.

EFFICIENCY: Ranges from 90% to 95%.

OPERATING AMBIENT TEMPERATURE: 80°C Maximum

TEMPERATURE RISE: Less than 50°C.

CONSTRUCTION: To MIL-T-27D, Grade 5, class "S".

ENVIRONMENT: Encapsulated to meet MIL-STD-810C, including vibration, temperature to 80°C, shock, sand, dust, humidity, saltspray, fungus, sunshine, rain, explosion. Note: For high altitude operation encapsulate terminals.

	OUTPUT PER PHASE

AMECON

THE WORLD'S LEADER IN TOROIDAL DESIGN AND MANUFACTURING*

AMECON offers quality inductive components in the following product lines:

Astronautics • MIL-T-27 • Avionics • Magnetic Amplifiers • SMPS SCR Controls • Light Dimmers • Motor Controls • EMI/RFI Filter Chokes Load & Energy Management • Instrument Transformers • Sensing & Relaying Instrumentation • 100% Shielding • Very High Isolation Low Noise for Computer & Audio Power Supplies

* From 0.1" to 55.5" Diameter & 0.1 oz. to 1,800 lbs.

AMECON

Serving OEM's for 12 Years

MINIATURE SPLIT-BOBBIN PLUG-IN POWER TRANSFORMER

For printed circuit applications

Transformers wound on a split bobbin permit the primaries and secondaries to be wound side by side rather than one over the other. Transformers can be supplied with single 115V or 115/230V, 50/60 Hz, dual primary, secondaries can be series or parallel connected. Units meet UL & V.D.E. standards.

WE'RE TRANSFORMER SPECIALISTS...

Another reason to buy ARSTAN products! Top Performance at Low Prices because we're SPECIALISTS in Miniature Coils, Bobbin Wound Ferrites and Miniature Laminated Transformers. ARSTAN products will translate your Creative Ideas into a precision unit encompassing the highest standards the marketplace offers! Custom manufactured to your specifications and produced for your particular application in our factories in the Far East. We provide Approval Samples on quantity orders prior to production. Many types meet UL standards. Accuracy, Performance, Price . . . IT'S ALL HERE, at ARSTAN!

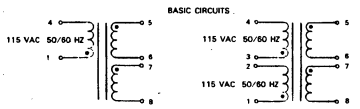
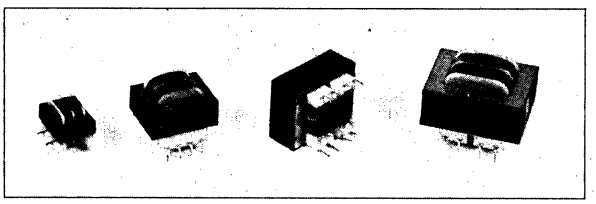
SPLIT BOBBIN POWER TRANSFORMERS

BASIC CIRCUITS





FEATURES

- High Dielectric Breakdown Strength
- Less Need For Electrostatic Shielding
- Compact Construction
- Single Or Dual Primary
- Custom Outputs Available On Request
- Designed To Meet U.L. Specs

SPECIFICATIONS

- 2500 VRMS Hipot
- Temperature Class B, 130°C
- Temperature Rise, 35°C Maximum At Rated Power
- Primary 115 VAC Or 115/230 VAC
- Sizes — 1.1, 2.4, 6, 12 VA

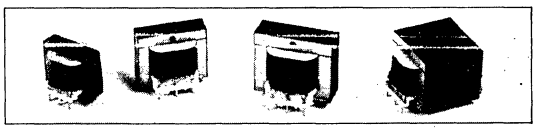
MINIATURE POWER TRANSFORMERS



FEATURES

- PC Mount
- Designed To U.L. Specs
- Mounting Frame Optional
- Single or Dual Primary
- Wide Range of Outputs
- Thermal Cutout Available on Request

SPECIFICATIONS

- Sizes — 1.5, 4.5, 10, 24 VA Rating
- Temperature class B (35°C Max. Rise At Rated Power)
- Dielectric Strength 1250 VRMs
- Inputs 115V Or 115/230V

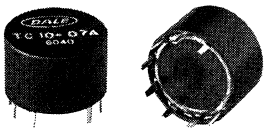
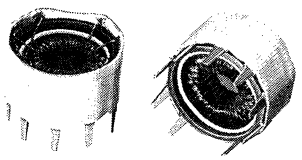
DALE®

TC CONVERTER TRANSFORMERS





FEATURES

• High conversion efficiency from DC input to filtered DC output • Designed especially for low-power solid state circuits • Designed for mounting on printed circuit boards • Miniature size for minimum space • Choice of encapsulated or open (impregnated) styles

SPECIFICATIONS

ELECTRICAL

Transformer Power Rating: 3 watts

Isolation, Primary-Secondary: 500 volts 60 Hz, operating characteristics may be varied to suit specific applications by appropriate selection of circuit components

ENVIRONMENTAL

Operating Temp. Range: −20°C to +80°C, intended for use in enclosed commercial and industrial applications

MECHANICAL

Coating: Varnish dip coat or epoxy encapsulated

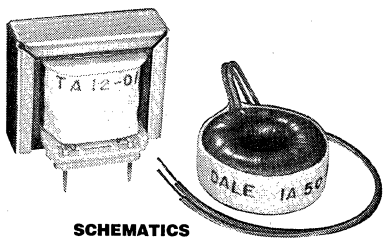
Terminals: .015″ thick, solder plated, varnish-free. Intended for P.C. board mounting

TYPICAL APPLICATIONS

Power supply for gas discharge display, battery-operated portable instruments, operational amplifier power supplies.

TA and IA SERIES

Telephone Coupling Transformers and Holding Coils



FEATURES

• Designed and built to meet telephone company requirements for data and voice access on leased private telephone lines or through the dial-up switched telephone network. • Provides line isolation, impedance matching, line balance, hybrid and holding coil applications.

SPECIFICATIONS

ELECTRICAL

Frequency Response: ±.5 DB from 300 to 3500 Hz

Power Level: −45 DBM to +7 DBM

Impedance Matching: ±10% from 300 to 3500 Hz

Return Loss:
22 DB min. = TA 10-03
13 DB min. = TA 13-01
14 DB min. = TA 14-01
26 DM min. = TA 10-01, TA 10-02, TA 10-04, TA 10-05, TA 10-06, TA 10-07, TA 11-01

Longitudinal Balance: Per FCC 68.310

Distortion: .5% max.

MECHANICAL

Coating: TA = Vacuum impregnated with polyester varnish.
IA = Tough vinyl coating.

Terminals: TA = Precision spaced PC type plug-in terminals.
IA = #28 AWG teflon coated insulated terminals.

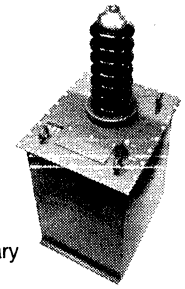
High Voltage Line Isolation Transformers In Oil Insulating Tanks



Model 3–TR–150–11

FEATURES:

- ▼ Complete varnish impregnation under vacuum
- ▼ Epoxy anchoring
- ▼ Immersed in high grade insulating oil*
- ▼ Electrostatic shield between primary and secondary windings
- ▼ "AN" type connector provided for input connections
- ▼ Good regulation

*Note: Shipped without oil to minimize transportation charges, except when otherwise specified in order.

SPECIFICATIONS:

- ▼ Each model available with porcelain output insulator
- ▼ Models also available with two shielded polyethylene output cables in place of porcelain insulator
- ▼ Standard types available for 120V and 240V input lines in 1:1, 1:2, and 2:1 voltage ratios with other input and output voltages available upon request
- ▼ Recommended for industrial, research, and developmental applications

Standard 60Hz Types				
Model No.*	Max. kVA	kV dc Insulation	Tank Size (in.) (W X D X H)**	Insulator Height (in.)***
1-TR-30-XX	1	30	10 X 12 X 11	6

All primaries: 115 volts, 60Hz.

Transformer, High Voltage—Line Isolation Open Type Construction—Epoxy Coated

FEATURES:

- ▼ Designed for continuous operation at rated voltage and power
- ▼ Epoxy coated, air insulated up to 30kV dc, oil insulated over 30kV dc
- ▼ Well suited to applications requiring reliable isolated line voltage at power ratings up to 1kVA
- ▼ Other higher voltage and power units available upon request

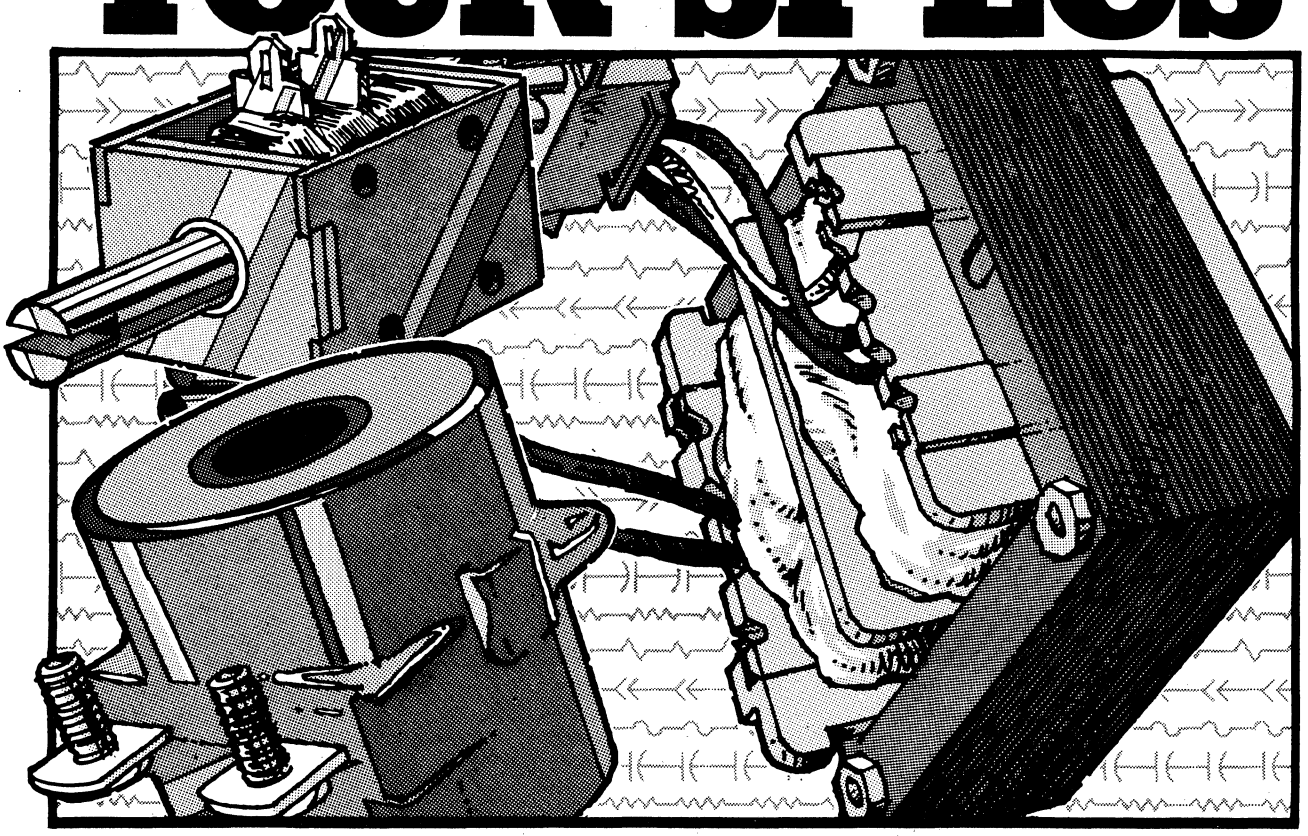
WE WANT YOUR SPECS



If you are designing a new part, modifying an existing one, making changes brought about by industry standards, or just looking for a new supplier . . . . ENDICOTT COIL should be your Source.

For over 30 years, we have successfully met the component specifications of companies marketing a diverse range of products including: Data Processing Equipment, Time Keeping Devices, Relays, Switches, Motors, Clutches, Brakes, Office Equipment, Keyboards, Control Systems and Printing Equipment - just to mention a few.

Whether you have short run or high volume needs, Endicott Coil's modern facility and experienced personnel can deliver your parts, on time and to your specifications.

MAGNETIC COMPONENTS TO YOUR SPECIFICATIONS

You turned it on and it worked. No wonder you trust Stancor.®

Your radio kit. Back then it was your most important project. When it worked the very first time you turned it on, you were filled with pride. You trusted Stancor transformers then. And you can still trust them now.

You can depend on Stancor's new computer oriented transformers today for the same reason you did years ago. The reason? Everyone, from our lowest profile Low Boy™ to our new constant voltage transformer is engineered for performance and triple checked for dependability.

Stancor — with off-the-shelf, or custom service for your design needs — is still #1 after all these years. No wonder you trust Stancor.

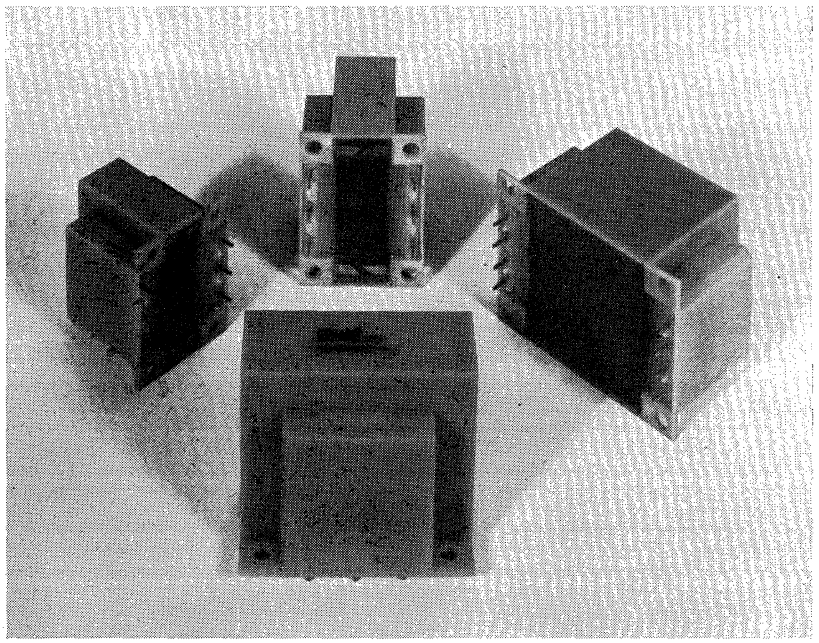
FORM-TRAN™

For military style packaging of printed circuit board plug-in transformers — at commercial prices



FEATURES

- Assures greater reliability.
- Encapsulated in form fitting shells to protect against possible damage due to use of water soluble and other fluxes as well as electrolytic corrosion experienced on open type construction.
- Enhances physical appearance of your printed circuit board.
- In addition to UL recognition modified "Form-Tran" packaging can be provided that will meet safety requirements valid in all member countries of the European Community and Canada.

FORM-TRAN PACKAGING CAN BE PROVIDED FOR OUR STANDARD LINES OF

PC/DPC*
EL/DEL*
MPC/DMPC*

Economy Line of Split-Bobbin Miniature Power Transformers

For printed circuit plug-in applications

Recognized Component
Underwriters Labs, Inc.

ATTRACTIVE PRICE SAVINGS IN QUANTITIES OF 500 AND OVER!

Available only in three types of channel frames as shown and in three different VA ratings these units are priced lower than our standard PC/DPC series and will afford substantial savings in larger quantity ranges. Additional savings can be realized if single secondary can be used in lieu of dual secondaries as shown.

Electrical characteristics differ from our standard PC/DPC series.

Style "C" channel frames supplied hot tin dipped to assure proper solderability. Other styles supplied electro tin plated.

Miniature Plug-In Power Transformers

For triple-output regulated supplies

This line was designed around our standard PC and LP Series and is specified in terms of DC output.

Size "V" available with single primary only.
Sizes "X" and "Y" available with single or dual primary.
Sizes "6" and "12" available with dual primary only.
1000V hipot is standard on Sizes "V", "X" and "Y"
1500V hipot is standard on Sizes "6" and "12".

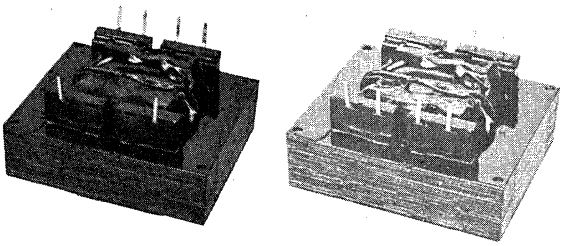
SPLIT BOBBIN — HIGHLY ISOLATED

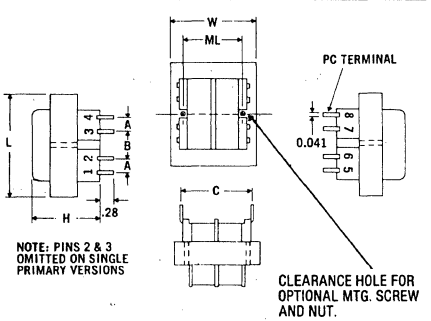


6 PIN TYPE ST — 8 PIN TYPE DST

TRANSFORMERS WOUND ON A SPLIT BOBBIN PERMIT THE PRIMARIES AND SECONDARIES TO BE WOUND SIDE BY SIDE RATHER THAN ONE OVER THE OTHER.

FEATURES ARE:
2500 V RMS Hipot
Elimination of electro-static shield
No cross-overs of primary and secondary leads
Class S insulation - 130°C

Transformers can be supplied with single 115V or 115/230V, 50/60 HZ dual primaries. Secondaries can be series or parallel connected.



Size	VA	L	W	H	ML	A	B	C	Lbs.

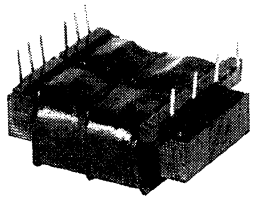
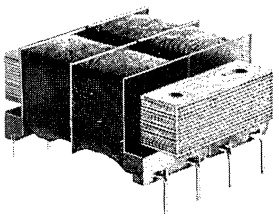
Miniature LO-PROFILE Plug-in Power Transformers

For printed circuit applications

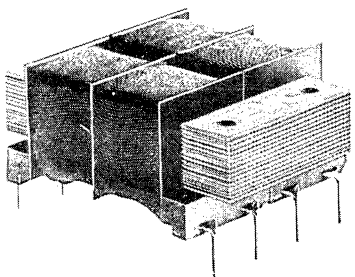
Three sizes: 2.5VA - 0.650 inches high/6VA - 0.850 inches high/12VA - 1.065 inches high



2.5VA - 0.650" HIGH



6VA - 0.850" HIGH



12VA - 1.065" HIGH

EWC's lo-profile, plug-in power transformers are designed for low height, critical pc board applications in semiconductor control and instrumentation. Interchangeable with those of other manufacturers, the units are for use in single, dual or reference dc supplies, or isolated control circuits.

EWC TRANSFORMERS FEATURE:

- **Non-concentric winding, achieved by secondary being wound alongside primary rather than directly over it, to lower inter-winding capacitance, thus eliminating the use of an electro-static shield.**
- **Hum-bucking (semi-toroidal) construction to diminish radiated magnetic field and balanced winding.**
- **Lo-profile design permitting close card spacing: 3/4" for 2.5VA units, 1" for 6VA units and 1 1/4" for 12VA units.**
- **Dual Primaries: 115/230V, 50/60 Hz**
- **1500V RMS HIPOT**

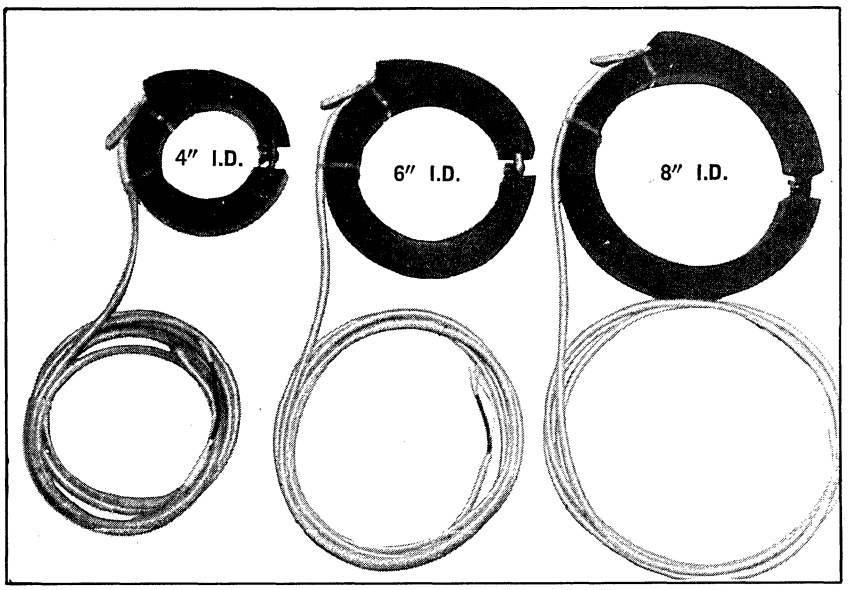
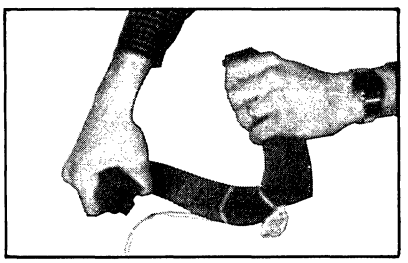
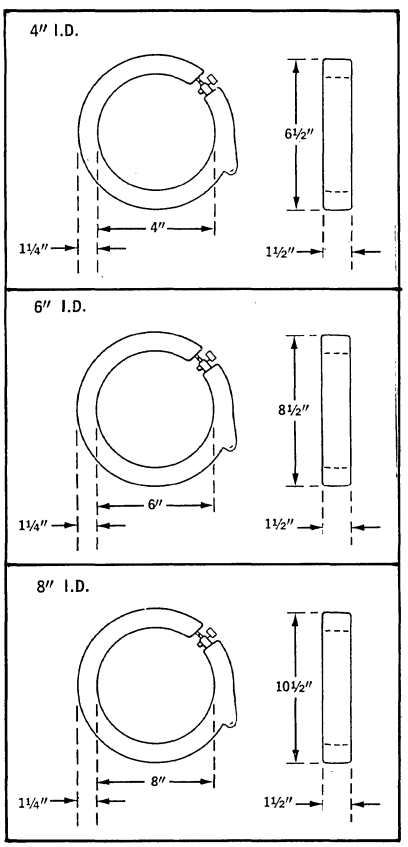
SPLIT-CORE CURRENT TRANSFORMERS





NOTE: Open split-core with a twisting motion only.



DESCRIPTION: This split-core current transformer was designed for easy installation on large bus or wire conductors in order to make electrical load surveys or for continuous monitoring of current.

APPLICATION: To be used with any 5 amp indicating or recording ammeter or amp or watt transducer. Also useable with indicating or recording clamp-on ammeter.

CONSTRUCTION: Directional silicon steel is used for the flexible core. Secondary windings are of copper. Unit is encapsulated in silicon rubber which protects against moisture, dirt, oil and corona. Remains flexible from −45° to +200°C.

INSULATION LEVEL: 600VAC — can be used over insulated conductors on higher voltage circuits.

SAFETY FACTOR: Secondary voltage limited to less than 50VAC when secondary leads are open circuited.

SECONDARY LEADS: 12 feet long with spade connectors.

COLOR: Transformer (red) — leads (yellow).

FREED TRANSFORMER CO., INC.

HERMETICALLY SEALED MINIATURE AND SUB-MINIATURE FILTERS TO MIL-F-18327

Freed Standard Filters are **Hermetically Sealed Miniature and Sub-Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency • **ILP-ILM Interstage Low Pass Filter.** Characteristic impedance 10,000 ohms, in and out • **LLP-LLM Line Low Pass Filter.** Characteristic Impedance 500 to 600 ohms, in and out • **High Pass Filters:** The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency • **IHP-IHM Interstage High Pass Filter.** Characteristic Impedance 10,000 ohms, in and out. • **LHP-LHM Line High Pass Filter.** Characteristic Impedance 500 to 600 ohms, in and out • **Band Pass Filters:** The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency • **IBP-IBM Interstage Band Pass Filter.** Normal input impedance — 10,000 ohms. Output impedance .5 megohms. Effective voltage step-up 2:1. (Output voltage to source voltage.) • **LBP-LBM Line Band Pass Filter.** Nominal input impedance 500 to 600 ohms. Output impedance .5 megohms. Effective voltage step-up 5:1. (Output voltage to source voltage.)

Special filters in all six types are available upon request.

NULL "T" FILTERS SERIES 1950

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

Prices on request.

Catalog No.	Frequency
NTF- 30	30 Hz
NTF- 60	60 Hz
NTF-120	120 Hz

FREED TRANSFORMER COMPANY. INC. 1795 WEIRFIELD ST., RIDGEWOOD, QUEENS, N.Y. 11385

FREED TRANSFORMER CO., INC.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A(graded 1 or 4 and 2 or 5 respectively.)Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending on the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

SF Non-stabilized cores, ±2½% inductance variations from —55°C to +85°C.
SN Non-stabilized cores, +2% inductance variations from —55°C to +85°C.
SE Temperature stabilized cores, +0.1% to —0.4% inductance variations from —1.5°C to +54°C.
SB Temperature stabilized cores, ±0.1% inductance variations from +13°C to +35°C.
SD Temperature stabilized cores, ±0.1% inductance variations from —1.5°C to +54°C.
SW Temperature stabilized cores, ±0.25% inductance variations from —54°C to +85°C.
SM Temperature stabilized cores, ±.25% —65°C to +125°C.
SP Temperature stable carbonyl iron cores, ±0.3% inductance variations from —55°C to +85°C.

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied on request. Our engineering and laboratory facilities are available for consultation, research and development.

*TI-20 through TI-23 have a very low voltage coefficient and inductance will change very little with voltage. Because of high frequency application, the maximum voltage is limited rather by breakdown than by saturation.

Normalized $V_{AC} = \frac{V}{F} \frac{1}{\sqrt{L_H}}$

Normalized $I_{AC} = I_{AC} \sqrt{L_H}$

Normalized $I_{DC} = I_{DC} \sqrt{L_H}$

where F —operating frequency in Hz
L_H —inductance in henries
Iac—A.C. current in MA
Idc—D.C. current in MA
V —A.C. voltage across the core

FREED TRANSFORMER COMPANY. INC. 1795 WEIRFIELD ST., RIDGEWOOD, QUEENS, N.Y. 11385

FREED TRANSFORMER CO., INC.

COMMERCIAL GRADE COMPONENTS

These components are designed to meet the demand for low-cost replacement parts for commercial electronic equipment.

The best commercially available materials have been utilized in the design of these units, to insure reliability and excellent performance characteristics. Vacuum impregnation with a non-hygroscopic varnish to prevent penetration of humidity are employed to give these units long life and trouble-free performance.

230-115 V, 50-60 C.P.S. Stepdown Transformers rated from 25 V A up to 5,000 V A Rating and line booster transformers are included in this series.

All units, with only a few exceptions, are uncased or of shell-type construction.

Isolation transformers and Stepdown transformers are equipped with line cord and receptacle.

MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

FREED TRANSFORMER COMPANY. INC. 1795 WEIRFIELD ST., RIDGEWOOD, QUEENS, N.Y. 11385

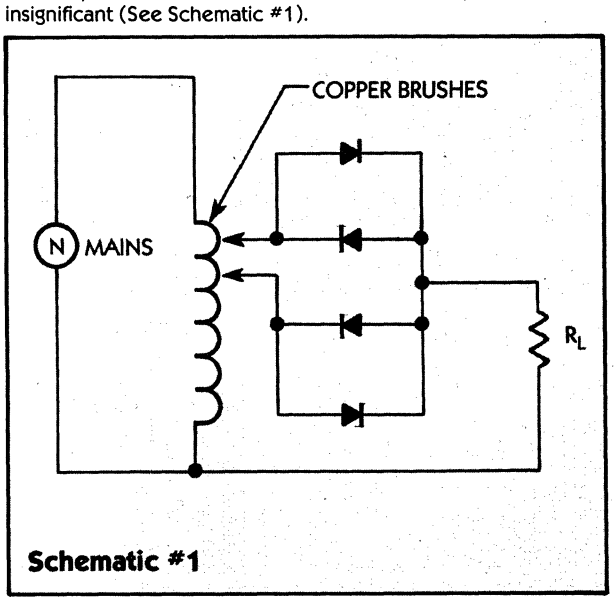
THE PROBLEM:

Conventional variable transformers have been built for years by dozens of companies all over the world, all along the same lines. A core of transformer steel (typically toroidal) is wound with a layer of copper wire which has a bare surface track ground down to provide a contact area for a traversing carbon brush. The inherent design flaw is that to provide continuous contact while traversing, the brush shorts two turns of the coil. This creates a turn-to-turn short circuit in the transformer which, if not for the relatively high impedance winding, the resistance of the wire, and the voltage drop in the carbon brush, would cause overheating and ultimate failure in the coil and brush. This weakness precludes the manufacture of a large KVA unit. More KVA requires lower impedance, heavier wire (less resistance in the shorted turn loop) and larger mass of brush (less voltage drop). Each of these changes increases the shorted-turn circulating current to the point that elaborate cooling systems are required to prevent the device from self destructing. Therefore, manufacturers of conventional adjustable transformers have been limited to the relatively small sizes of 7.5KVA or 21KVA three phase, or the system must be oil cooled to remove the destructive heat. At power levels above 7.5 and 21KVA multiple units must be stacked, with all the resulting size, cost and manpower penalties.

PESCHEL VARIABLE TRANSFORMER™

THE SOLUTION:

The PESCHEL VARIABLE TRANSFORMER (PVT) has the same basic transformer steel core surrounded by a copper wire winding. However, the winding is done so that all odd turns compose one track and all even turns the other. Each nickel plated track is traversed by its own copper (not carbon) brush a few thousandths of an inch narrower than winding wire dimension. The two brushes are connected together through one or more sets of back-to-back diodes with a standard .6 volt forward voltage drop. Thus as long as the turn-to-turn voltage is less than 1.2 volts, no current can circulate. The .6 volt drop is insignificant (See Schematic #1).



Schematic #1

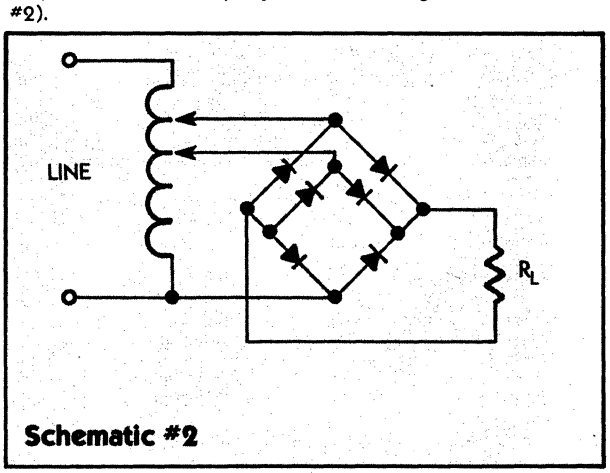
The diodes are extremely inexpensive because there is no PIV requirement, the copper brushes are not only less expensive than carbon brushes, but provide much better conductivity, consequently, electrical losses which occur in carbon brushes are avoided.

The PVT also incorporates ampere balancing coils under the tapped winding. These balancing coils eliminate higher centerpoint or non-linear impedance characteristics found in single layer variable transformers.

Heat from diode drop/load current is minimal compared to the rating of the unit and is not dissipated on the core, but on the track hardware. Less heat generation allows considerably lengthened overload time ratings. Furthermore, the brush mechanism of the PVT has significantly less mass than the brush mechanism of conventional ganged units, allowing smaller drive motors and/or much faster traverse speeds.

If line isolation or step-up or step-down voltages are required a primary is inserted under the tapped winding. This eliminates the need for an extra transformer and simultaneously reduces wasted power.

DC OUTPUT: If the same blocking diodes (with appropriate higher PIV) on the AC machine are connected in a bridge circuit, output is a continuously adjustable DC voltage. (See Schematic #2).



Schematic #2

Analysis of the schematic shows turn-to-turn current is precluded from circulating by the drop of the two diodes and the load resistance. Two extra diodes are required in a single phase bridge, six in three phase, but the cost of the diodes are insignificant when compared to SCR's and associated firing circuits. The advantages of the PVT over an SCR controller are many. The cost per horsepower within a certain range (like 5 to 100HP) should be less. Maintenance is greatly simplified. Since the PVT is an electro-mechanical device, plant maintenance people can see the problem whereas modern electronic controllers are "Black Boxes" beyond the technical capabilities of most plant electricians. Electro-magnetic interference caused by high frequencies generated by SCR turn-on is eliminated and output voltages, other than rectified line voltage, are easily obtained without an additional transformer.

CONCLUSION:

In brief, the PVT is a significant break-through in variable transformer technology. Inventors have long recognized the inherent flaw of the conventional variable transformer and struggled to eliminate or reduce the turn-to-turn short circuit losses, however, it wasn't until appropriate diodes became available, that the problem could be solved. As with so many other significant inventions, the solution was elegantly simple, once it was conceived.

The invention of the PVT eliminates the one inherent flaw in existing variable transformer design and permits manufacture of **any size** for **any voltage.**

ADVANTAGES:
- No Electronics
- No Waveshape Chopping
- No Effect on Power Factor
- No EMI
- Same Ripple, Any Voltage

USES:
- DC Motor Speed Controller
- Chemical Processes
- Electro-Magnets
- Electropainting

OPTIONS:
- 1% regulator package
- Cabinet
- Fully Instrumented with meters, input breakers, overloads, cabinet, etc.

DC VARIABLE TRANSFORMERS WITH LINE ISOLATION

50 AMPERE, 4% RIPPLE, CONTINUOUSLY ADJUSTABLE FROM 0 TO MAXIMUM 3 φ INPUT

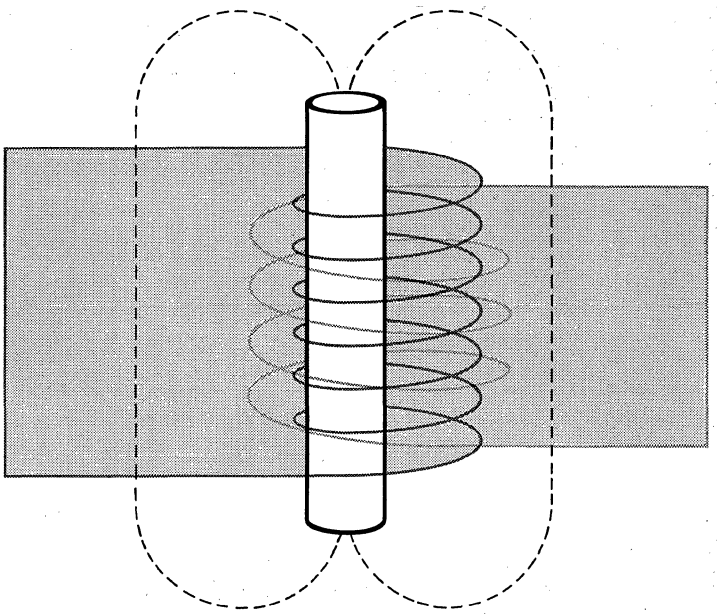
Hyphen desired input voltage to current when ordering

FEATURES:
- Continuously Adjustable Output From 0 to Max
- No SCR Spikes, Waveform Chopping or Power Factor Change
- 4% Ripple at any Voltage Setting
- Extremely Efficient, i.e. 96% on the Lowest kW Unit to 98.4% on the 3 Megawatt
- Primary Voltages from 208V to 13.0 kV Available
- 1/4-1/2 Weight and Size Of Equivalent Power Units
- Rectifiers Have 2x PIV and 2-4x Current Safety Factor, RC Compensated
- Voltage Resolution From 0.6% on Low Voltage Units to 12% on High Voltage Models
- 50/60 HZ Standard
- Servo Motor Drive
- Polarity — Reversible or Floating
- Regulation — Less Than 5% No Load to Full Load

NOTES:
Model Nos prefix DC to volts — current & hyphen the desired AC input, i.e.
1st model DC 300-50 — 208V
last model DC 30kV-50 — 13.2kV or DC 30kV-50 — 4161V
Order with any input voltage desired

Hisonic... specialists in custom and standard inductor and transformer components



The control of electric current is only as good as the components that carry it.

INDUCTORS: Our manufacturing capabilities are the result of experience dating back to 1950 and now include virtually every known construction your special applications may require . . . and at reasonable prices.

TRANSFORMERS: Hisonic's special power/converter and signal/matching transformers for both audio and wide video ranges are used in airborne comm/nav and ground communications systems. Included are toroidal, pot core, and laminated core types manufactured to commercial and MIL specifications. Our 30 year experience is at your disposal to help solve your transformer and inductor problems.

Key source for reliable magnetic components, power supplies and control systems for over 40 years.

300 VA TO 3000 KVA STANDARD & SPECIALTY MAGNETIC COMPONENTS

STANDARD TRANSFORMERS

DIT SERIES — Drive Isolation Transformers. (12-550KVA, U.L. Listed)

Designed to provide electrical isolation and voltage transformation for SCR adjustable-speed motor drives. Dry type. 600V class. Single phase and three phase. 50Hz and 60Hz. 5% FCAN and FCBN primary taps. Open frame or NEMA I enclosed, 150°C rise/220°C insulation class standard, 155°C or 80°C or 55°C rise/220°C insulation class optional.

Size Range (KVA)

Single Phase

• 1, 1½, 3, 5, 8, 12, 15, 20, 27, 30, 34

Three Phase

• 8, 12, 15, 20, 27, 34, 40, 51, 63, 75, 93, 120, 150, 180, 220, 280, 330, 440, 550, 660, 760, 870, 980, 1100.

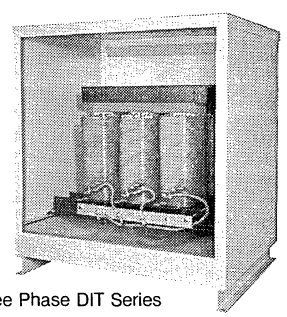
Standard Voltages Available

Single Phase

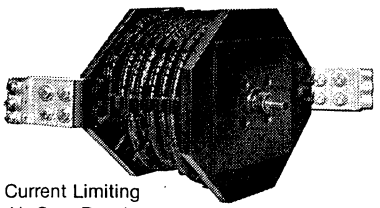
• Primary or Secondary 208, 230, 380, 460, 575, 230/460, 415

Three Phase

• Primary (△) 208, 230, 380, 460, 575, 230/460, 415
• Secondary 208Y/120, 230Y/133, 380Y/220, 460Y/266, 575Y/332, 230x460Y/133x266, 415Y/240



Three Phase DIT Series



Current Limiting Air Core Reactor

GPT SERIES — General Purpose Transformers

Designed to provide electrical isolation and voltage transformation for lighting, electric heating and industrial motor loads. Dry type, 600V class, single phase and three phase, 50Hz and 60Hz. FCAN and FCBN primary tap arrangements are standard. 150°C rise/220°C insulation class standard, 115°C or 80°C or 55°C rise/220°C insulation class optional.

Size Range (KVA)

Single Phase

• 3, 5, 7½, 10, 15, 25, 37½, 50, 75, 100, 167

Three Phase

• 3, 6, 9, 15, 30, 45, 60, 75, 112½, 150, 225, 300, 400, 500, 750, 1000

Standard Voltages Available

Single Phase

• Primary (3KVA-15KVA) 240/480, 208, 277, 480, 600
(25KVA-167KVA) 240x480, 480, 600
• Secondary (All KVA sizes) 120/240

Three Phase

• Primary (△) 240, 480, 600
• Secondary 208Y/120, 240△, 480Y/277

HVDT SERIES—High Voltage Distribution Transformers

Designed for in-plant distribution and voltage step-down. Conventional dry type or resin cast coil. 5KV through 15KV class. Single phase and three phase. 50Hz and 60Hz. FCAN and FCBN primary tap arrangements are standard. 150°C rise/220°C insulation class standard, 115°C or 80°C or 55°C rise/220°C insulation class optional.

Size Range (KVA)

Single Phase

• 3, 5, 10, 15, 25, 37½, 50, 75, 100, 167, 200, 250, 333, 500

Three Phase

• 15, 30, 45, 75, 112½, 150, 225, 300, 400, 500, 750, 1000

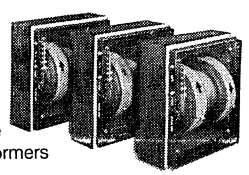
Standard Voltages Available

Single Phase

• Primary
5KV Class: 2400/4160Y
8.66KV Class: 4160/7200Y
15KV Class: 7200/12470Y
7620/13200Y, 7960/13800Y
• Secondary (All KVA Sizes)
120/240

Three Phase

• Primary (△)
5KV Class: 2400, 4160, 4800
8.66KV Class: 7200
15 KV Class: 12000, 12470, 13200, 13800
• Secondary
208Y/120, 240△, 480Y/277



High Voltage X-ray Transformers

SPECIALTY MAGNETIC COMPONENTS

Also see our catalog pages under AC POWER SOURCES and DC POWER SOURCES.

Transformers

• Convection, forced air or water cooled.
• Dry type, liquid filled, cast-resin.
• Low voltage, high voltage to 300KV.
• High current to 20,000 Amperes.
• High frequency to 10KHz.
• Low temperature rise, high efficiency.
• Ferroresonant transformers - conventional constant voltage and harmonic-neutralized.
• Ultra isolation transformers to 0.005 picofarads.
• Low capacitance transformers, electrostatic shielded.
• High reactance transformers - short circuit current limited.
• Modulation (Output) transformers to 50KW.
• Rectifier and filament transformers.

Inductors

LC Series - Link Chokes (DC)

Designed for use as a smoothing inductor in the DC link between rectifier and inverter in variable-speed AC motor drives from 15 to 1000 HP. Dry type, 600V class.

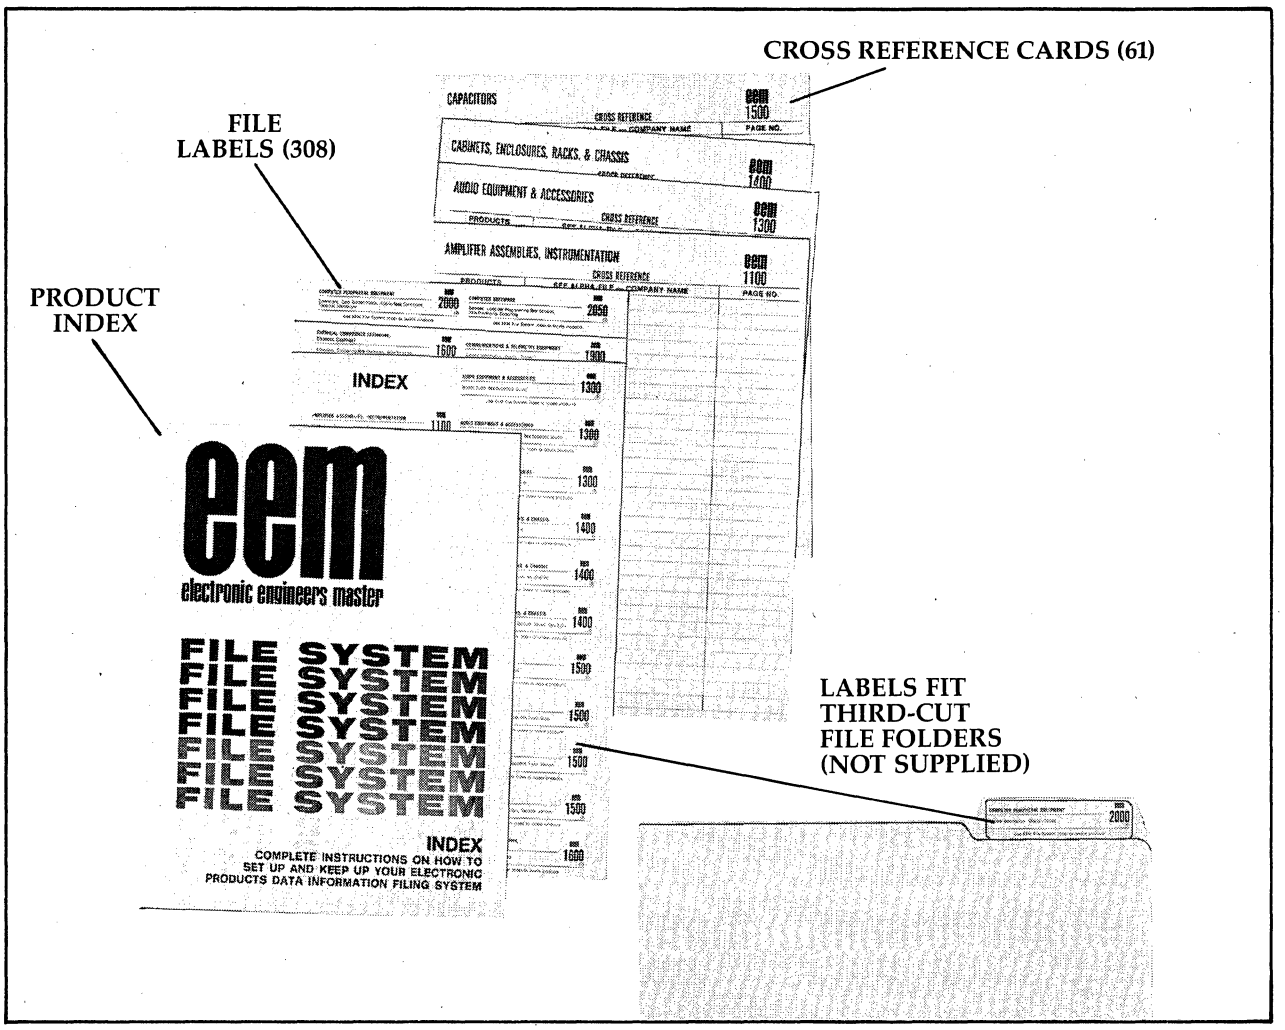
LR Series - Line Reactors (AC)

Designed for use as a line reactor in the three phase input lines supplying variable-speed AC motor drives from 15 to 1000 HP. Dry type, 600V class; three phase; 50Hz and 60Hz.
Other specialty inductors include:
• AC, DC.
• Iron-core, air-core.
• Linear, swinging.
• AC current limiting reactors.
• AC power factor correction reactors.
• DC filter chokes.
• AM modulation reactors.

Saturable Reactors:

Low voltage, High voltage to 15 KV. Sizes to 1000 KVA.

Route 31, RD 5-65 • Flemington, New Jersey 08822 • 201-782-5525 • Telex: 833701/AGEX/FLEM



WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

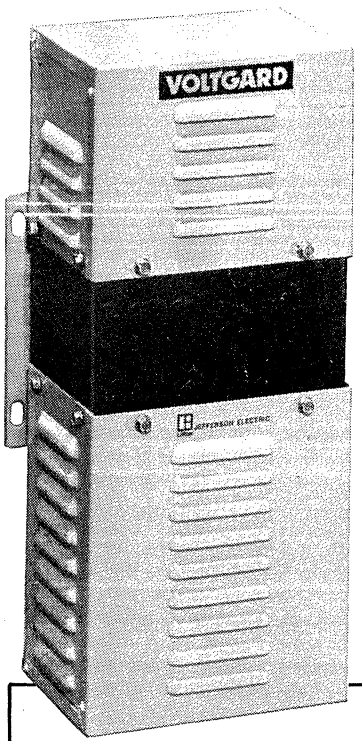
Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.



VOLTGARD™ by Jefferson

Even with all the advances made in the transmission of electric power, the single most source of trouble is the voltage variation at the final distribution point. These variations can be caused by switching equipment, lightning and heavy current drawing machinery. These changes can cause trouble in equipment unless some control is used to stabilize the voltage. This is where the Voltgard line voltage regulator is used.

The Voltgard gives ±½% regulation for a input range of ±15% of nominal. The Voltgard has a sinewave output and contains less than 3% total harmonics under full load. It is most applicable to AC applications where harmonics can affect operation. With a given change in line voltage, the output voltage will fall in the regulation band within 25 milliseconds (1½ cycles). As the input frequency changes, the output voltage changes in the same direction. For a 1% change in frequency, there is a 1½% change in output voltage.

The Voltgard has a full-load efficiency of 90 percent for nominal output levels. Another advantage of Voltgard, it is also current limiting. As the load current is increased beyond the rating, the output voltage will fall to zero. This is very important in a short circuit situation because the unit can be at short circuit indefinitely and not damage the unit. Voltgard will operate in an ambient range of -20°C to +50°C.

With all the features of Voltgard, it makes this unit most suitable for any type of electronic equipment, process control equipment, photography and most other applications where the AC voltage must be stable for operation.

J M Transformer Co., Inc.

Dept. EM, 112 Florida Street
Farmingdale, N.Y. 11735
(516) 293-0475

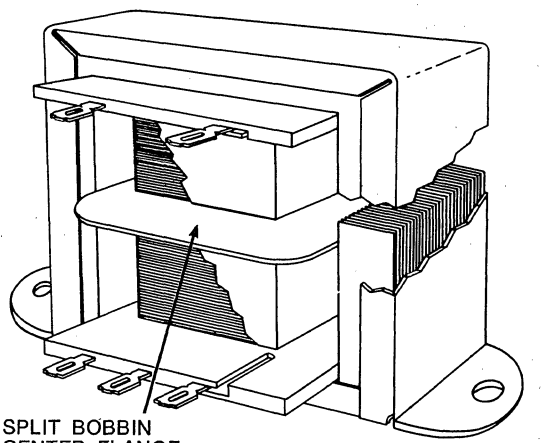
- **TRANSFORMERS WITH RATINGS TO 2400 VA**
- **Available with secondary voltages up to 500 V**
- **Available with secondary current ratings to 20 Amps**
- **PROTOTYPES AVAILABLE WITHIN ONE WEEK**
- **No set-up charges on special orders**
- **CHECK OUR LOW PRICES!**

SPLIT BOBBIN POWER TRANSFORMERS

- 50/60 Hz
- Power Ratings to 750 VA
- Single, Dual, and Tapped Primaries
- Single and Multiple Outputs
- Terminals and Flexible Leads Available
- Available with End Bells

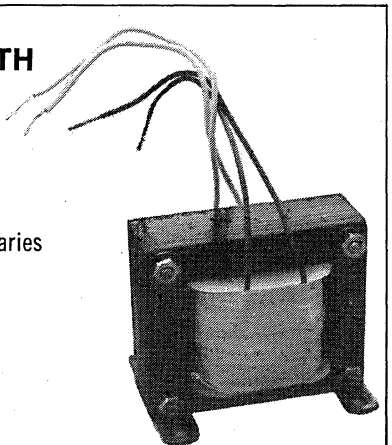
- Non-Concentric Winding — Lower Capacitance — Better Insulation — 2500-4000 VRMS Hipot — No Need for Electro-static Shield

WE SPECIALIZE IN POWER TRANSFORMERS FOR MEDICAL ELECTRONICS (PATIENT ATTACHED EQUIPMENT) FOR DOMESTIC AND FOREIGN APPLICATIONS.



SPLIT BOBBIN
CENTER FLANGE

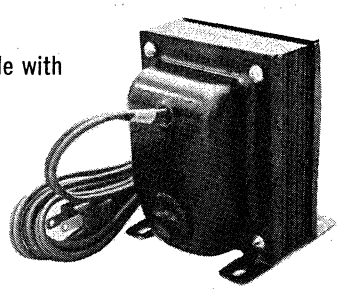
RECTIFIER POWER TRANSFORMERS WITH FLEXIBLE LEADS



- 50/500 Hz
- Power Ratings up to 750 VA
- Wide Range of Voltages
- Single, Dual, and Tapped Primaries
- Single and Multiple Outputs
- Available with End Bells
- Terminals also available

STEP DOWN AUTO TRANSFORMERS

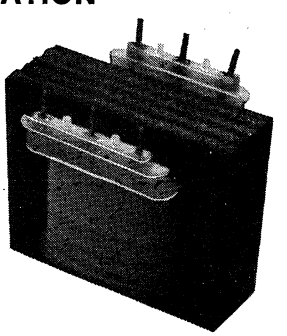
- 50/60 Hz
- 230/115 V
- 100-1200 VA
- Also available with open frame construction



POWER ISOLATION TRANSFORMERS

- Split Bobbin Construction for High Isolation at Low Cost . . . (2500-4000 VRMS hipot)
- Power Ratings from 10 VA-2400 VA for 50/60 Hz Operation
- 115V/230V:115V, 115V:115V, 115V/230V:115V/230V, Many OtherVoltage Ratings Available
- Terminals or Flexible Leads Available. Open Frame or Enclosed Construction

MINIATURE PLUG-IN POWER TRANSFORMERS PC APPLICATION



- 50/500 Hz
- 10 VA
- Single or Dual Primaries
- Single or Dual Secondaries
- 6- and 8-Pin Models Available

J M Transformer Co., Inc.

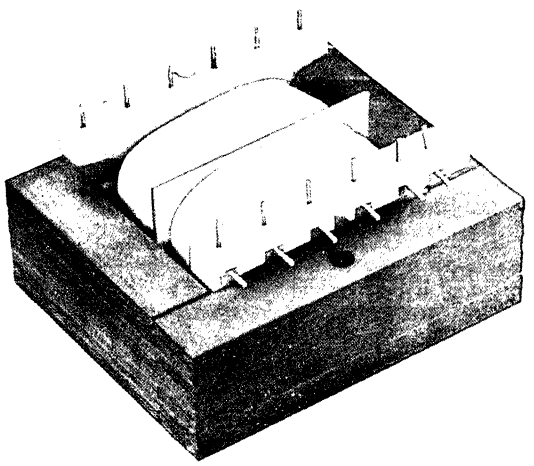
Farmingdale, N.Y. 11735
(516) 293-0475

LOW PROFILE SPLIT BOBBIN — PC BOARD TRANSFORMERS — SERIES L 20VA



L Series Transformers offer a particularly low profile for 20VA (only 1.34″ high). Although they are relatively light (¾ lb.) optional mounting holes for #4 screws are available for additional mounting strength.

The use of a Split Bobbin allows winding to be non-concentric (side-by-side), consequently high isolation is achieved at low cost.

- Better insulation — 2500 VRMS hipot is standard.
- Lower capacitance — no need for electro-static shield.

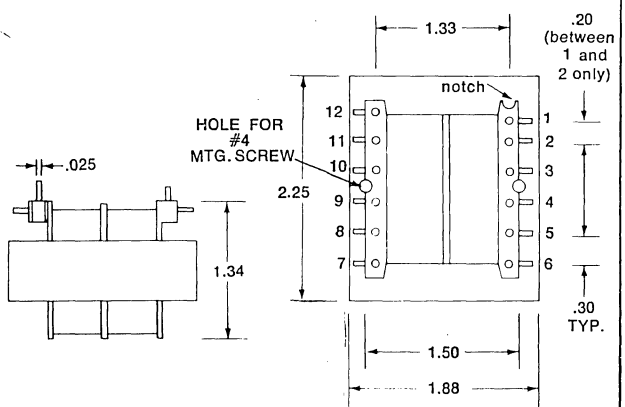
Please note that the standard items listed below utilize 6 or 8 pins, while 12 pins are available. We would like to quote your more complex requirements . . . you may save cost and space by combining two less complex Transformers into one.

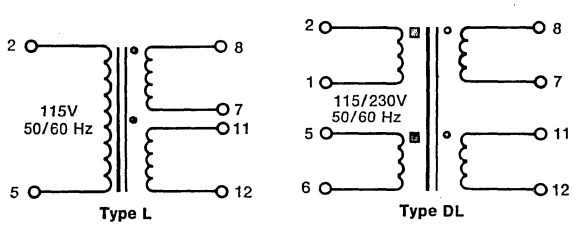
We would also be glad to quote your less complex requirements. For example, if only a Single Primary and Single Secondary are needed, you can save considerable cost by utilizing only 4 Pins.

STANDARD TRANSFORMERS

Part #		Secondary RMS Ratings	
Single 115V Pri.	Dual 115/ 230V Pri.	Series	Parallel
L-10	DL-10	10 VCT @ 2A	5V @ 4A
L-12	DL-12	12.6 VCT @ 1.6A	6.3V @ 3.2A
L-16	DL-16	16 VCT @ 1.25A	8V @ 2.5A
L-20	DL-20	20 VCT @ 1A	10V @ 2A
L-24	DL-24	24 VCT @ .8A	12V @ 1.6A
L-32	DL-32	32 VCT @ .625A	16V @ 1.25A
L-40	DL-40	40 VCT @ .5A	20V @ 1A
L-48	DL-48	48 VCT @ .4A	24V @ .8A
L-80	DL-80	80 VCT @ .25A	40V @ .5A
L-120	DL-120	120 VCT @ .16A	60V @ .32A

Smaller, lower profile units as well as larger, more powerful units are available.



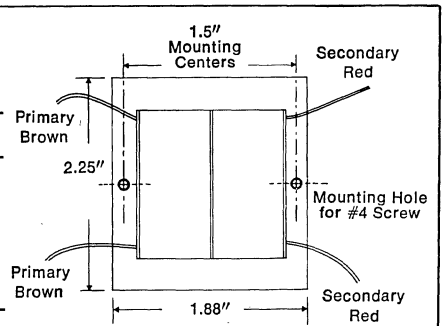


LOW PROFILE SPLIT BOBBIN POWER TRANSFORMERS with 4″ Flexible Leads

- Only 1.1 inches high — Wt. ½ lb.
- Ideal for PC Board and Chassis Mounting where low height is required
- 2500 VRMS hipot

Standard Transformers:
115 V 50/60 Hz Primary — 10 VA

Part Number	Secondary RMS Full Load Rating
LPS 10-8	8 V @ 1.25 A
LPS 10-10	10 V @ 1 A
LPS 10-12	12.6 V @ .8 A
LPS 10-16	16 V @ .63 A
LPS 10-20	20 V @ .5 A
LPS 10-24	24 V @ .42 A
LPS 10-32	32 V @ .31 A



CUSTOM TRANSFORMERS

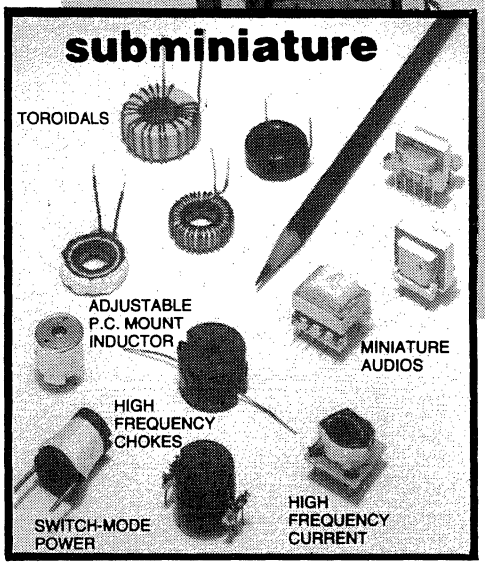
prototypes/short runs/high volume runs

your special application our specialty

power to 1000 VA

UL RECOGNIZED INSULATING SYSTEMS FOR CLASS (B) AND CLASS (F) PER UL1446

subminiature



Some of the many transformers Lenco has designed and produced for a wide range of industries. Our specialty . . . custom designed to your special application. Prototype through production. Power 10 MW to 1000 VA.

BOBBIN WINDING

PRODUCTION TESTING

LENCO, dedicated to transformer design, product improvement, cost reduction and fast delivery to meet your specifications and most critical production schedule. An endless variety of types, sizes and performance capabilities for a wide variety of industries.

Experienced personnel with specially developed electronic skills for an exacting technology to meet the most critical requirements. Manufactured to conform to UL, CSA, VDE, FCC-Part 68, etc.

Our specialty is your special application and we invite you to send or call for your custom requirements. For no obligation quotes, engineering, design consultation and manufacture, contact Lenco, the performance people.

LAYER WINDING MACHINES

AUDIO Impedance matching — Isolation —Broad frequency response — Low insertion loss — FCC Part 68.

CONSTANT VOLTAGE Regulating transformers built to your specifications for DC power supplies or low distortion AC.

CONTROL Custom designed to UL, VDE, CSA, etc. specifications.

CONVERTER High Conversion efficiency from DC input to filtered DC out. Toroidal, Laminated, Ferrite, (Switch-Mode) etc.

CURRENT Toroidal, Laminated, Core, Impregnated, or Encapsulated.

FILAMENT Dry type, Laminated core.

HIGH TEMPERATURE Vacuum impregnation with temperature material to 200 °C. Epoxy encapsulated.

INDUCTORS Filter, A.C. Noise filtering, Switch-mode.

INPUT AND OUTPUT Designed to your specifications.

ISOLATION Audio, Step-down, Step-up, Foil electrostatic shielded, Electromagnetic shielded.

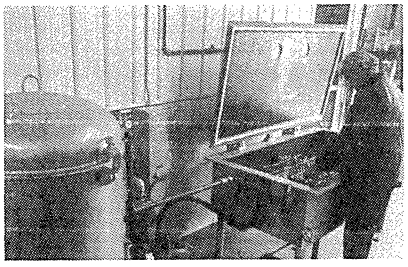
LOW PROFILE PC mount, Split bobbin, Vacuum varnish or epoxy impregnated.

MEDICAL UL 544 Patient connected, or non-patient connected. Power.

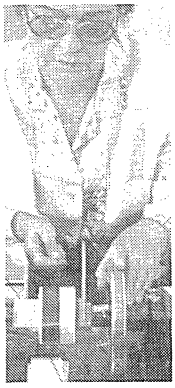
POT CORES PC mount, Frame mount, Encapsulated or Impregnated.

SWITCH-MODE POWER Dry type, Air cooled, Laminated or Ferrite.

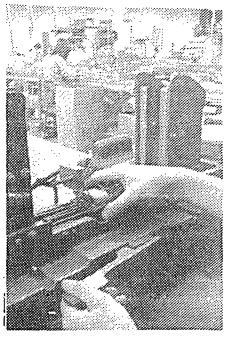
THREE PHASE 50-60-400 Hertz up to 1 KVA.



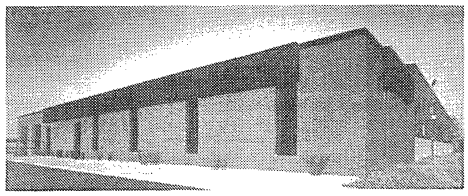
VACUUM IMPREGNATION SYSTEM



HAND WINDING



AUTOMATIC LAMINATING



Modern new 20,500 square foot facility for the production and manufacture of high quality transformers.

TO ORDER ANY MCI TRANSFORMER

Find the page in this catalog that lists the basic type of transformer you need. Pages are arranged as follows:

4-01- & 4-02-	Horizontal P.C. Transformers, single primary (4-01-) or dual primary (4-02-)
4-03- & 4-04-	Vertical P.C. Transformers, single primary (4-03-) or dual primary (4-04-)
4-05-	Low Profile Transformers
4-06- & 4-07-	Quick Connect Power Transformers, single primary (4-06-) or dual primary (4-07-)

Current ratings in each table are at secondary voltage. MCI utilizes seven-digit part numbers. When you have selected the transformer type that best suits your requirements, determine the part number as follows:

Digit Number	Example	Indicates	Example
First Digit	4	Transformer	Always 4
Second & Third Digits	01	Type	Horizontal P.C., single primary
Fourth Digit	3	Size in either series or parallel configuration	Size 3
Last three digits	010	Secondary voltage	10V C.T.

The part number for the example used is 4-01-3-010, which is the part number for a Single Primary, Horizontal P.C. Transformer, Size 3, with a 10V C.T. Secondary Voltage or 5V.

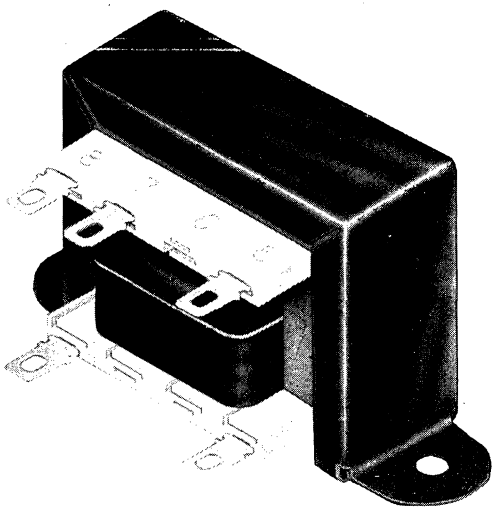
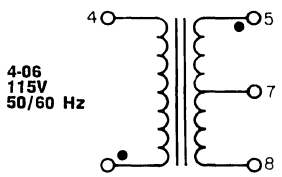
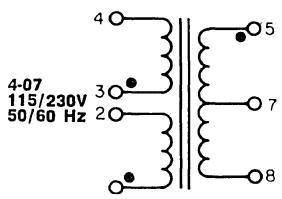
QUICK CONNECT POWER TRANSFORMERS

SERIES 4-06- & 4-07-







2500 Volt RMS Hipot in a variety of practical sizes. Maximum operating temperature 130°C available with either single 115 or dual 115/230V primary (for all but 2.4 VA size).

MCI's split bobbin and non-concentric winding provide better insulation and high signal isolation, thus eliminating the need for electrostatic shielding.

Adaptations of standard transformers are also available. Dots on schematics shown below indicate like polarity.

TO ORDER ANY MCI TRANSFORMER

Find the page in this catalog that lists the basic type of transformer you need. Pages are arranged as follows:

4-01- & 4-02-	Horizontal P.C. Transformers, single primary (4-01-) or dual primary (4-02-)
4-03- & 4-04-	Vertical P.C. Transformers, single primary (4-03-) or dual primary (4-04-)
4-05-	Low Profile Transformers
4-06- & 4-07-	Quick Connect Power Transformers, single primary (4-06-) or dual primary (4-07-)

Current ratings in each table are at secondary voltage. MCI utilizes seven-digit part numbers. When you have selected the transformer type that best suits your requirements, determine the part number as follows:

Digit Number	Example	Indicates	Example
First Digit	4	Transformer	Always 4
Second & Third Digits	01	Type	Horizontal P.C., single primary
Fourth Digit	3	Size in either series or parallel configuration	Size 3
Last three digits	010	Secondary voltage	10V C.T.

The part number for the example used is 4-01-3-010, which is the part number for a Single Primary, Horizontal P.C. Transformer, Size 3, with a 10V C.T. Secondary Voltage or 5V.

MICROTRAN

TELEPHONE COUPLING TRANSFORMERS

FOR INTERCONNECT OF VOICE/DATA MODEM TERMINALS TO TELEPHONE LINES

DESIGNED TO MEET FCC PART 68

Provides line isolation and matching — Prevents line imbalance — Wide dynamic signal level capability — Low distortion — Permits Optimum use of Voice-Grade Telephone Lines for Broadband Data Signals

- Frequency Response: 300-3500 Hz ±0.5 dB
- Level: −45 dBm to +7 dBm
- Longitudinal Balance: Per FCC 68.310
- Distortion: 0.5% Max.
- Impedance Matching: ±10% over entire frequency range
- Return Loss: 26 dB Min.

MICROTRAN — MINIATURIZED AUDIO TRANSFORMERS

MICROPHONE/TRANSDUCER INPUT TRANSFORMERS

FOR: PROFESSIONAL SOUND STUDIOS — BROADCAST MIXING CONSOLES — CONTROL AND INSTRUMENT AMPLIFIERS

EQUIVALENT TO IMPORTED EUROPEAN STUDIO GRADE TRANSFORMERS

- WIDE BANDWIDTH — BROAD FREQUENCY RESPONSE
- EXTREMELY LOW DISTORTION
- NEGLIGIBLE HUM PICK UP
- SUBMINIATURE SIZE
- EASE OF MOUNTING AND ORIENTATION
- POLARIZING VOLTAGE CONNECTION FOR CONDENSER MICROPHONES
- LOW MICROPHONICS
- ELECTROSTATIC SHIELDING

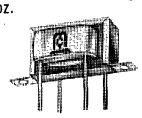
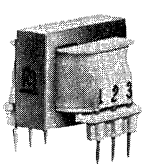
MINIATURE AUDIO TRANSFORMERS — M & MT SERIES

MOLDED M-M
To order add -M to Part No. For plug-in printed circuit applications. Epoxy resin provides resistance to extremes of ambient. Weight 1¾ oz.

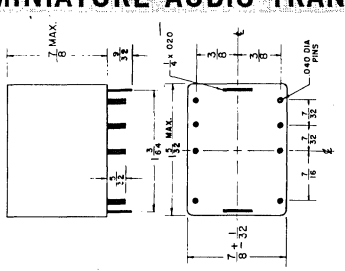


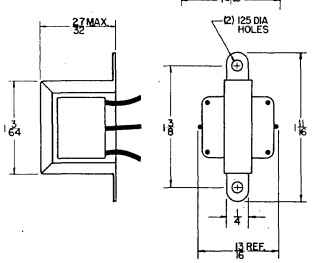
OPEN FRAME WITH CHANNEL M-FB
To order add -FB to Part No. Leads 4″ long. #28 PVC Weight 1.13 Oz.

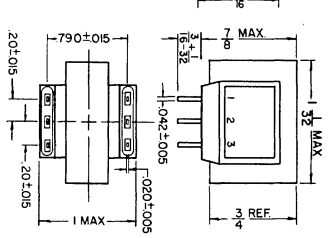


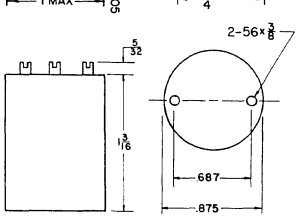
OPEN FRAME PRINTED CIRCUIT M-PC
To order add -PC to Part No. Units with more than 6 pins have 7 or 8 — .025 x .015 pins on .150 centers. Weight 1.2 Oz.

ALUMINUM CASED M-A
To order add -A to Part No. Supplied with 2-56 screws. Weight 1.25 Oz.









All items shown in charts below are available in any of the mechanical packages shown. These units can be used as input, interstage, output, isolation and other impedance matching applications. Primary and secondary windings may be interchanged to obtain required impedance matching. Also available in hermetic construction.

PRINTED CIRCUIT — DCM SERIES

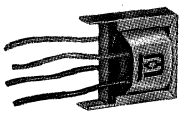
New Industrial/Commercial grade miniature printed circuit transformers. Rigid terminals provide fixed mounting centers usually found in expensive molded transformers. Weight .5 Oz.

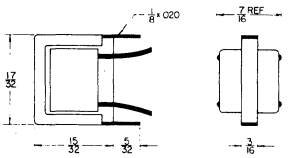
IMMEDIATE DELIVERY FROM DISTRIBUTORS

Dept. EM / 145 E. Mineola Avenue, Valley Stream, NY / (516) 561-6050 / TWX: 510-225-8412

MICROTRAN — MINIATURIZED AUDIO TRANSFORMERS

VERI-MINIATURE TRANSFORMERS — VM SERIES





PLUG-IN TAB MOUNTED CHANNEL .VM-FPB

To order add -FPB to Part Number, i.e. VM2-FPB. 4″ color coded leads. Weight .2 Oz.

FREQUENCY RESPONSE ±2 dB 200 TO 10,000 Hz

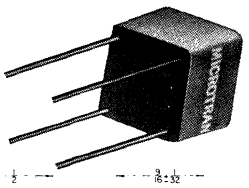
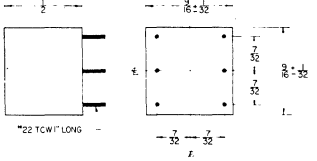
VM90	Magnetic Shield Mu-Metal slip-on can for VM-M Series. 20 dB shielding.					

* Add either -FPB, or -M to Part Number to designate construction. See Photos.





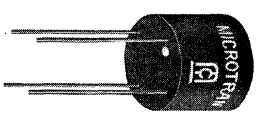
MOLDED VM-M

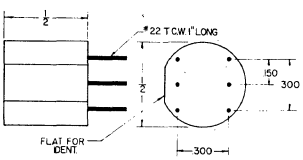
To order add -M to Part Number, i.e. VM2-M, VM9-M. Epoxy molded. Weight .25 Oz.

ULTRA-MINIATURE TRANSFORMERS — UM SERIES

The miniaturized design of this series offers a relatively high power level for condensed module and printed circuit packaging.

Frequency Response ±2 dB 300 to 10,000 Hz
Measured at Level Stated for 300 Hz





MOLDED UM-M

To order add -M to Part Number, i.e. UM22-M. Weight .14 Oz.

Part No.	Primary Impedance	Secondary Impedance	Unbal. Pri. DC mA	Pri. DCR	Sec. DCR	Level mW @ 300 Hz	Level mW @ 1 kHz

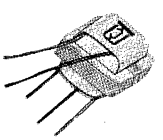
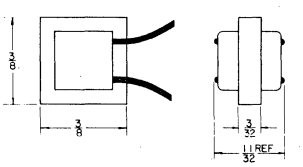
UM90	Magnetic Shield Mu-Metal slip-on can for UM-M Series. 20 dB shielding.						

* Add either -F, or -M to Part Number to designate construction. See Photos. Power levels shown are for 7½% maximum distortion.



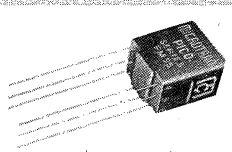


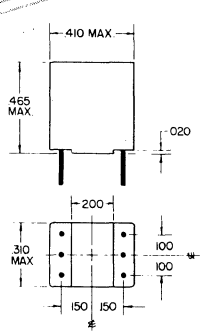
OPEN FRAME UM-F

To order add -F to Part Number, i.e. UM22-F. 4″ color coded leads. Weight .08 Oz.

PICO MINIATURE TRANSFORMERS — PM SERIES

Designed to provide maximum utilization of space in miniaturized printed circuit board applications. .10 grid dimensions conform to P.C. design standards. **Frequency Response ±2 dB 300 Hz to 100 kHz†**





MOLDED PM-M

To order add -M to Part Number. Epoxy molded. For printed circuit applications. Gold plated nickel alloy leads .020 x ¾″. Weight .1 Oz.

MICROTRAN

P.C. 50/60 Hz POWER SUPPLY TRANSFORMERS

PLUG-IN PRINTED CIRCUIT POWER TRANSFORMERS FOR DC POWER SUPPLIES

For Microprocessor Logic and OP AMP Power Supplies. For construction of low cost, miniaturized, regulated and unregulated DC power supplies for latest solid-state digital and linear circuitry. Permits packaging flexibility unobtainable with prepackaged power supplies. Low-profile, miniaturized construction permits close stacking of P.C. boards. Precision spaced molded-in terminals. All primaries 115 V 50/60 Hz except PCL6600 Series. 115 230V 50/60 Hz. **Transformers supplied with engineering bulletin providing schematics and suggested components.**

SPLIT BOBBIN PC 50/60 HZ POWER TRANSFORMERS

SPLITFORM® PRINTED CIRCUIT POWER TRANSFORMERS

For Compact P.C. Board Solid-State Power, Control and Instrumentation Applications

- **SPLIT BOBBIN CONSTRUCTION — Center Flange Insulation Barrier 2500V RMS Hipot**
  High Isolation for Low Leakage Applications
  Low Capacitive Coupling Minimizes Line Noise and False Triggering
- **115V SINGLE OR 115/230V DUAL PRIMARY**
- **DUAL SECONDARIES MAY BE EITHER PARALLEL OR SERIES CONNECTED**
- **PRECISION SPACED MOLDED-IN TERMINALS**
  Terminal Numbers are Molded on Bobbin
- **CLASS S 130°C INSULATION**
- **ATTRACTIVE PRICING**

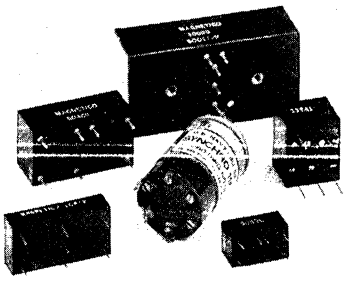
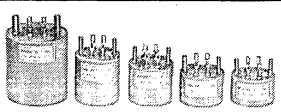
SCOTT T TRANSFORMERS



FEATURES:
- PRECISION/INTERCHANGEABILITY
- REPEATABILITY
- STABILITY/NO AGING
- NO SYSTEM TRIMMING REQUIRED



HOW TO ORDER:
Order Magnetico Standard Units directly by using the Magnetico Part Number.

VA RATING	SECONDARY VOLTAGE
Catalog Number	6.0 thru 300 (VRMS)

SCHEMATIC	SHIELD
X — No Tap	N — No Shield
T — Center Tap	S — Electrostatic Shield

EXAMPLE:
To order a 115 V 400 Hz to 26 V center tapped, 6 VA power transformer with no shield. Order Magnetico Number: **9602-26-T-N.**
VA RATING: 9602 **SCHEMATIC:** T
SECONDARY VOLTAGE: 26 **SHIELD:** N

218 LITTLE FALLS RD., P.O. BOX 238, CEDAR GROVE, N.J. 07009

MPI is one of the most reliable suppliers, on a large scale, of transformer and magnetic components to the computer, data processing, communications & medical and recreational electronics OEMS. All units meet MPI's stringent QC standards and are UL CSA & VDE listed as required.

The product categories below provide general specification information for our basic product lines. However, our ability to design and manufacture custom components, to your specs, makes us the industry's true "super source".

INDUCTORS

PEAKING COIL AL TYPE

Style ..... Axial lead
Temperature rise ..... 20°C
Ambient temperature.. 80°C
Temperature range.... −20°C to +100°C
Terminal tensile strength ..... 2.5kg.
Inductance range .... 0.22μH – 1000μH

PEAKING COIL EL TYPE

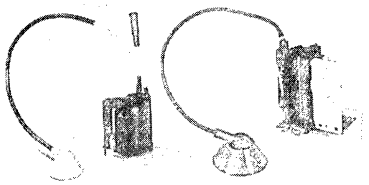
Style ..... Radial lead
Temperature rise ..... 20°C
Ambient temp ..... 80°C
Temperature range.... −20°C to +100°C
Terminal tensile strength ..... 1.5Kg.
Inductance range .... 0.22μH – 1000μH

high voltage components

MURATA ERIE NORTH AMERICA, INC.

Miniature Flyback Transformers

For 14″-20″ color TV and data display



FEATURES

- Integral HV multiplier circuitry
- Small size
- HV resistant epoxy moldings
- Up to 25 KV output

TYPICAL SPECIFICATIONS

Items	Units	MSH-S305	MSH-S477
Input Voltage	V	112	123

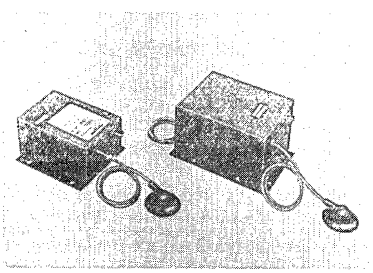
Miniature High Voltage Power Supplies

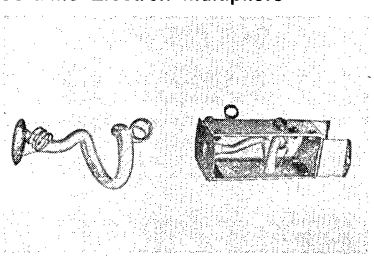


FEATURES

- Up to 17 KV output
- High, 40 KHz conversion frequency reduces size
- Provision for small-signal output control
- Built-in HV output stabilization
- Automatic overload protection
- Low output ripple
- Special epoxy resin for high reliability

CERATRON

Ceramic Electron Multipliers



These units are completely solid-state and may be substituted for standard vacuum-type electron multipliers in a variety of applications including ion, gamma ray, electron, photon and soft x-ray detection. They offer high gains to 10^6 min. and are extremely linear at up to 1 microamp. Noise figures are very low.

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E., Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

WIDEBAND TRANSFORMERS

North Hills

UNBALANCED TO BALANCED TRANSFORMERS

Balanced secondaries center-tapped and dc-isolated from primaries. Mid-band insertion loss less than 0.5 dB. Bandwidth defined at low frequency end by 3 dB drop from mid-band response, at high end by max. VSWR of 1.25.

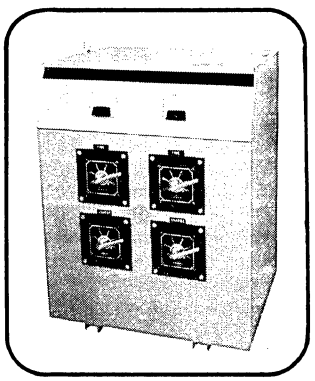
NWL ...the source for industrial and electronic transformers

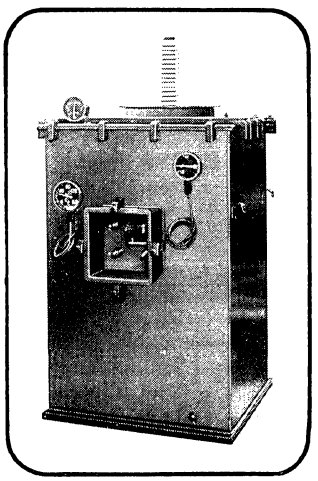
Since 1929, NWL has consistently been in the forefront of transformer design and manufacture.

High voltage, high frequency and high current transformers are particular strengths at NWL — whether for prototype, standard or special applications.

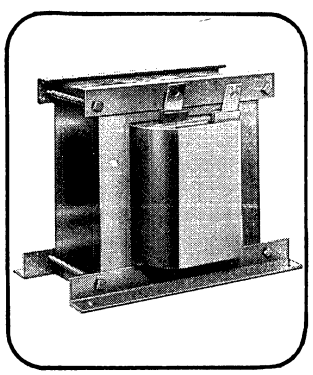
There's another reason you should look to NWL for solutions to your specific transformer problems. We've never hesitated to tackle the tough design problems head-on. In fact, NWL's technological superiority is a recognized fact in the precipitator, furnace, desalting, nuclear, and other fields requiring high technology.



Heating transformers for resistance and induction furnaces

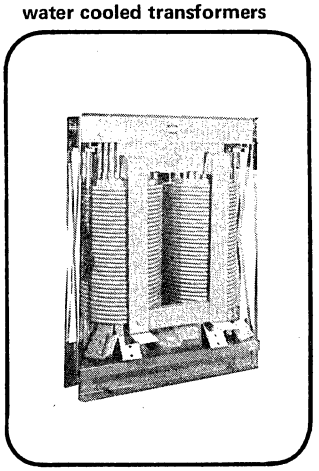


Oil-filled, high voltage Transformer/Rectifier Sets

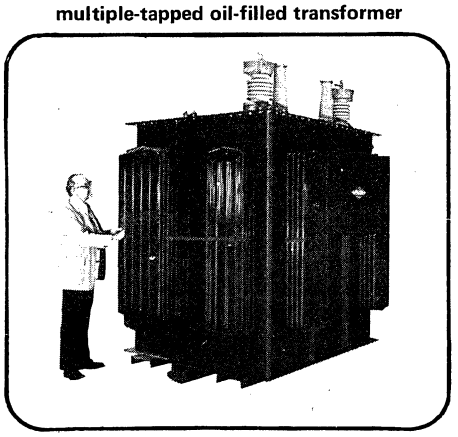


Current limiting reactors

High power and high current water cooled transformers



15 KV Class, 3,000 KVA-equivalent multiple-tapped oil-filled transformer



NWL ...the source for:

TRANSFORMERS ● Furnace ● Filament ● Heating ● Lighting ● SCR Controls ● Plate ● High Frequency ● Instrument ● Phase Changing ● Welding ● High Voltage ● Testing ● High Reactance ● Output

PLUS ● Saturable Core Reactors ● Chokes ● Packaged Controls ● AC Reactors ● Air Core Reactors

MANUFACTURING RANGE

Up to 150 KV
1 ma to 50,000 AMP
4 Hz to 20 kHz
5 KVA to 6,000 KVA
Dry, Oil-Filled, Silicone Fluid-Filled, Water Cooled, and Epoxy Cast Units Available.

NWL TRANSFORMERS
Rising Sun Road ● P.O. Box 358

OUR SPECIALTY 1 WEEK DELIVERY FOR CUSTOM PROTOTYPES

LOW PROFILE SPLIT BOBBIN PRINTED CIRCUIT POWER TRANSFORMERS

- Low profile — allows closer printed circuit board stacking
- Split bobbin construction — center flange insulation barrier provides 2500 VRMs Hipot — non concentric coil winding results in low interwinding capacitance, eliminates need for electro-static shielding.
- Class S (130°C) insulation system
- Single 115V and dual 115V/230V primaries are standard.
- Dual secondaries for variety of utilization
- 12 pin bobbin design increases available options for multi-winding special orders
- Low regulation
- Units are inspected and tested 100%
- Low prices — no minimum quantity requirements

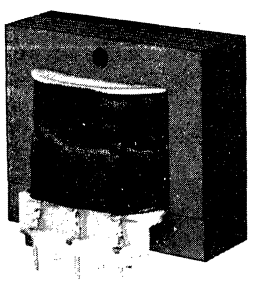
PLUG-IN PRINTED CIRCUIT TELEPHONE COUPLING TRANSFORMERS



Designed for Interconnection of Voice/Data Modem Terminals to Telephone Lines.

- Frequency response ±0.5dB 300Hz-3500Hz
- Power level −45dbm to +7dbm
- Longitudinal balance — per FCC Part 68
- Distortion — 0.5% max.
- Impedance matching ±10% over frequency range
- Return loss — 26dB min.
- Units are inspected and tested 100%
- Low prices — no minimum quantity requirements

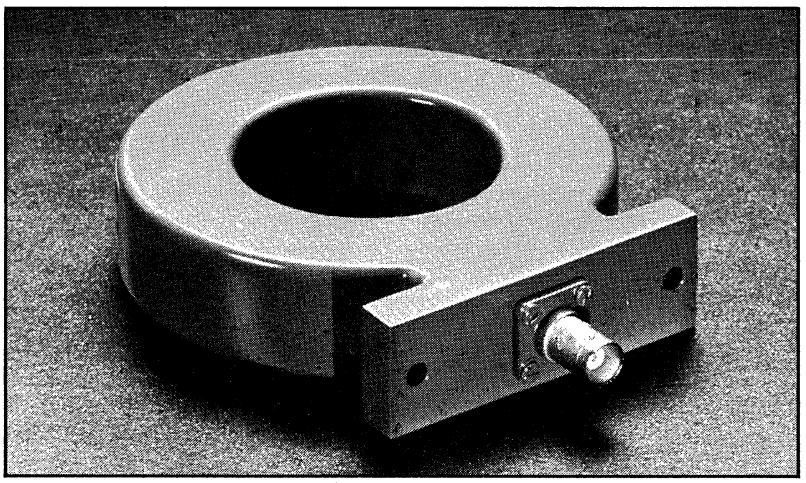
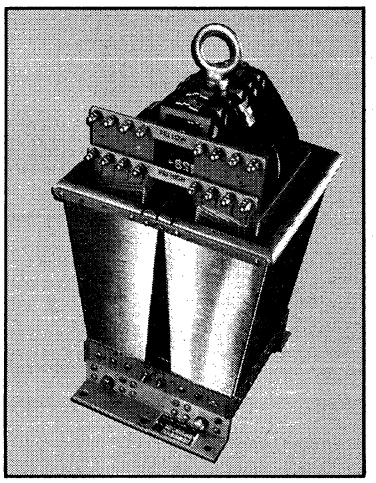
PEARSON ELECTRONICS, INC.





Wide Band, Precision Current Monitor Transformers

With a Pearson current monitor and an oscilloscope, you can measure pulse or ac currents from milliamperes to kiloamperes, in any conductor or beam of charged particles, at any voltage level up to a million volts, at frequencies up to 250 MHz or down to below 1 Hz.

The monitor is physically isolated from the circuit. It is a current transformer capable of highly precise measurement of pulse amplitude and waveshape. The one shown above, for example, offers pulse-amplitude accuracy of + 1%, − 0% (typical of all Pearson current monitors), 20 nanosecond rise time, and droop of only 0.5% per millisecond. Three db bandwidth is 1 Hz to 35 MHz. Whether you wish to measure current in a conductor, an electron device or a particle accelerator, it is likely that one of our off-the-shelf models (ranging from ½" to 10¾" ID) will do the job. In addition to our standard models, we build many custom designed current transformers to meet special needs and applications.

Very High Voltage & Very High Current Pulse Transformers

Pearson Electronics specializes in the development, design and manufacture of high and super high voltage pulse transformers. Typical of the applications for which we have designed and manufactured pulse transformers are units for supplying beam power to high power microwave tubes such as klystrons and traveling wave tubes, units providing pulse voltage to particle accelerator injection systems, pulsed x-ray tubes and high power lasers.

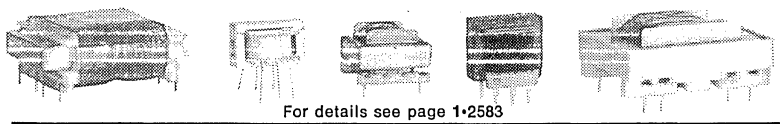
TTC SERIES
COUPLING TRANSFORMERS - HYBRID TRANSFORMERS - HOLDING COILS

The **TTC SERIES** has been developed to meet telephone interconnect, coupling, matching and bridging requirements for use in voice, instrumentation and modem applications. **This series meets FCC PART 68 requirements.**

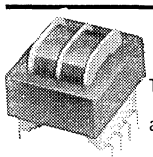


For details see page 1•2583

DP SERIES
ENCAPSULATED AUDIO TRANSFORMERS

The **DP SERIES** is cost effective for applications involving severe environments. This series is tested to the requirements of **MIL-T-27** and several part numbers meet **FCC PART 68.**

For details see page 1•2582



3F SERIES
3-FLANGE BOBBIN POWER TRANSFORMERS

The **3F SERIES** offers 2500V RMS dielectric breakdown testing primary-to-secondary (side-by-side winding type). They are available with single and dual primary connections for 115V, or 115/230V, 50/60 Hz circuits.

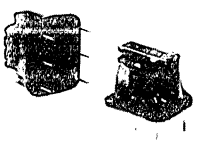
For details see page 1•2585

PEP SERIES
UL-1411 RECOGNIZED POWER TRANSFORMERS

This series complies with the safety requirements of most **WORLDWIDE AGENCIES** (UL, CSA, Europe-IEC 65 and Japan-MITI) including 4000V RMS dielectric breakdown testing primary-to-secondary.

For details see page 1•2584

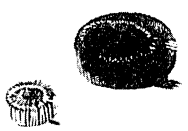
FILE NUMBER E59673 TAMRADIO



STT SERIES
ENCAPSULATED SCR AND TRIAC TRIGGER TRANSFORMERS

The **STT SERIES** provides line isolation in SCR and Triac controlled circuits. **STT TRIGGER** transformers pass **2600V RMS** dielectric breakdown testing and are completely encapsulated for applications involving severe environments.

For details see page 1•2582



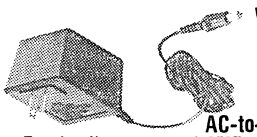
POWER AND NOISE ABSORBING INDUCTORS

The **SKC SERIES** of toroidal power inductors are gapped for energy storage circuits with DC ratings from **5 to 50A DC.**

The **SKL SERIES** is functionally gapped for circuits requiring high "L" at low DC amps and nominal "L" at rated DC amps.

The **SKP SERIES** is designed on powered iron toroidal cores for RFI and EMI filtering and noise absorbing applications.

For details see page 1•2586.



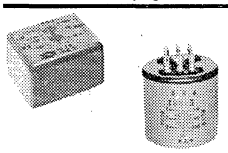
WALL PLUG-IN AC TO DC POWER SOURCES

This series of wall plug-in AC-to-DC battery chargers, battery eliminators and power supplies are available in a complete variety of input plug-in styles and comply with worldwide safety agency requirements.

AC-to-AC Wall Plug-in Transformers Are Available

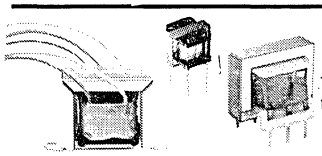
For details see page 1•2587

FILE NUMBERS
UL E82180
CSA LR36236
VDE F-7969-331
TAMRADIO



PROFESSIONAL AUDIO TRANSFORMER SERIES

This series is widely used in high performance applications and meets most requirements of communications, broadcasting, recording and measuring apparatus. Available in solder lug, lead and printed circuit mounting styles; these transformers are metal cased. Several part numbers are electrostatic and MU-metal shielded.

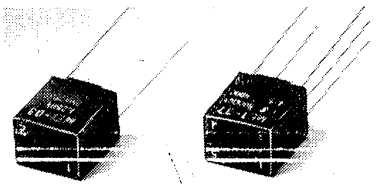


ATT SERIES
AUDIO TRANSFORMERS

These cost effective, volume produced transformers are available for impedance matching circuits and sound distribution systems. They are available as printed circuit, solder lug and lead styles.

Quality magnetic components at competitive prices . . . including COILS, POWER & AUDIO TRANSFORMERS, INDUCTORS, PULSE TRANSFORMERS, NOISE SUPPRESSION COILS, DC-DC CONVERTER TRANSFORMERS, PLUG-IN BATTERY CHARGERS and SWITCH-MODE POWER SUPPLY TRANSFORMERS & INDUCTORS. Our diversified manufacturing facilities are located in Taiwan, Malaysia and Japan. For details on standard and special requirement products, pricing and delivery—contact our headquarters.

MINIATURE ENCAPSULATED TRANSFORMERS



Small Size . . . . . 0.310" x 0.410" X 0.465"
Gold Plated Leads . . . . . 0.020" Nickel
Response . . . . . ±2dB, 300 Hz to 100 KHz
Impedance Range . . . . . 3.2 to 200K Ohms
Meets Requirements of MIL-T-27 as TF5S21ZZ

DP SERIES ENCAPSULATED AUDIO TRANSFORMERS

The **DP SERIES** of encapsulated audio transformers are cost effective for applications involving severe environments. Completely encapsulated, these small audio transformers eliminate environmental and board washing problems associated with open style transformers. The environmental quality of the **DP SERIES** is established through testing for humidity, immersion, solvent resistance and temperature cycling to the exacting reqirements of MIL-T-27. Several part numbers meet the requirements of **FCC PART 68** for telephone or modem applications. All **DP SERIES** audio transformers have frequency response characteristics within ±2dB from 200 Hz to 20 KHz.

TTC SERIES — MEETS FCC PART 68
COUPLING TRANSFORMERS - HYBRID TRANSFORMERS - HOLDING COILS

TTC SERIES transformers and holding coils are designed to meet the performance requirements of telephone connected apparatus. They are widely used in the voice, data, isolation, bridging, matching, balancing, hybrid, and holding coil circuits of central office, PABX, subscriber telephone, modem and computer terminal equipments. TTC Series transformers provide optimum insertion loss, frequency response, longitudinal balance, distortion, return loss, impedance matching and isolation characteristics.

THESE TRANSFORMERS MEET REQUIREMENTS OF FCC PART 68

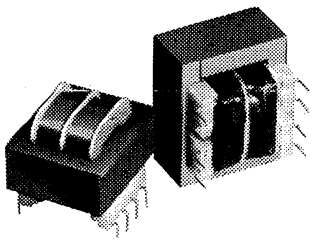
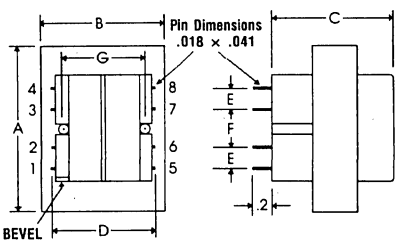
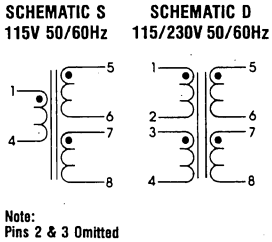
3F SERIES — 3 FLANGE BOBBIN PRINTED CIRCUIT BOARD POWER TRANSFORMERS

The **3F SERIES POWER TRANSFORMERS** are designed to include the most desirable features required for printed circuit board mounted applications. The 3F Series is constructed on a three flanged bobbin which is molded with UL listed material providing low capacitive coupling without electro-static shielding.



- 2500 VAC HIPOT, PRIMARY TO SECONDARY ISOLATION
- 115V SINGLE OR 115/230V DUAL PRIMARY
- TERMINAL NUMBERS ARE MOLDED ON BOBBIN
- COMPLIES WITH MOST UL SAFETY STANDARDS





NOTE: #4 Clearance Hole — 2 Places

3 FLANGE BOBBIN TRANSFORMER FOR UNREGULATED & REGULATED POWER SUPPLIES

The **LPP SERIES LOW-PROFILE PLUG-IN POWER TRANSFORMERS** offer the circuit designer a variety of options including dual output which may be connected in series or parallel, secondary voltages for unregulated or regulated power supplies, and dual output voltages.

PART NUMBER	SECONDARY RATINGS - R.M.S.		DC OUTPUT

INDUCTORS FOR SWITCH-MODE POWER REGULATOR, CONTROL AND NOISE FILTERING CIRCUITS

The **SKC SERIES INDUCTORS** are designed on gapped toroidal tape wound cores for DC switching power supply, regulator and energy storage circuits — DC current ratings **5 to 50 AMPS DC.**

The **SKL SERIES INDUCTORS** are designed on functional gapped toroidal tape wound cores for power circuits requiring high inductance at low DC currents and nominal inductance at rated DC amps.

The **SKP SERIES INDUCTORS** are designed on powered iron toroidal cores for RFI and EMI filtering and other noise absorbing applications. Also, **SKP SERIES INDUCTORS** are most useful in DC circuit applications, available in a wide range of "L" values and DC current ratings to **40 AMPS DC.**

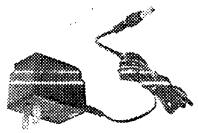
UL, CSA AND VDE LISTED WALL PLUG-IN AC-TO-DC BATTERY CHARGERS AND ELIMINATORS



These AC-to-DC plug-in power sources are useful as battery chargers, battery eliminators and DC power supplies. They are available in direct plug-in and desk top styles with a variety of output connectors. Most have capacitor filtered outputs. A complete variety of worldwide input plug-in styles are available and each style meets the respective safety agency requirements.

Special order options include:
Multiple listing and your logo; multiple or regulated outputs; UL-1244 for instruments floating above ground; and AC-to-AC direct plug-in transformers.

PERKIN-ELMER

PRECISION TOROIDAL TRANSFORMERS

- INPUT SCOTT T
- REFERENCE ISOLATION
- OUTPUT SCOTT T
- DIGITALLY TAPPED
- COMBINATION
- PRECISION RATIO
- RESOLVER ISOLATION
- CUSTOM DESIGNS

The Electronic Products Department of the Perkin-Elmer Corporation is in a unique position to provide Custom Precision Signal Transformers as a result of 20 years of experience designing and manufacturing very special transformers for the Vernistat® a.c. potentiometer and allied products. **High Performance in small size has always been a successful objective.** Our State of The Art Winding Equipment and Techniques enable close control of turns and taps for close matching of windings and repeatibility of product.

Perkin-Elmer can provide Custom Signal Transformers with high accuracies over the full MIL temperature range. For example, exponential function units with 80 taps to an accuracy of ±0.003% can be provided. SCOTT T Transformers have been built to an accuracy of 5 seconds of arc with a null of 0.1 millivolt. The transformers are fully encapsulated toroidal units and are available with contact pins for PC board mounting. They are manufactured in accordance with MIL-T-27C Grade 5. High input impedance and low output impedance can be matched to specifications. Operating frequency can also be per specifications.

SCOTT T TRANSFORMERS

The SCOTT T input transformers converts 3 wire synchro inputs to 4 wire resolver outputs (sin θ and cos θ) with high transformation accuracy and minimum quadrature. SCOTT T Transformers for converting 4 wire resolver inputs to 3 wire synchro outputs can also be supplied. Our output SCOTT T Transformers maintain high accuracies even under heavy load conditions. These units are useful in solid state synchro to digital and digital to synchro converter applications and are particularly applicable in multiplexed conversion systems.

Operating Temperature Range −55°C to +125°C.
Frequencies 400 Hz except as otherwise stated.

Manufactured in accordance with MIL-T-27 Grade 5.
Specified transformation accuracies are with stated load.

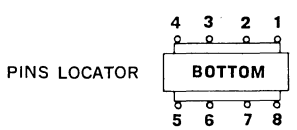
SERIES — STYLE — SIZE — TOTAL SERIES VOLTS



Paraline manufactures a wide variety of power transformers. They are stocked in 11 different sizes with 32 available secondary voltages totaling over 1600 different types.

There are five general series designations, each series designed to suit the requirements of your particular application.

A brief description of each series is as follows:

- The "SS" series has a single 115V primary and a single center-tapped secondary. Also available with a 230V primary.
- The "CS" series has a single 115V primary and two identical and separate secondaries. Also available with a 230V primary.
- The "DS" series has dual primaries for 115V or 230V operation and two identical and separate secondaries.
- The "MS" series has dual primaries for 115V or 230V operation and two center-tapped secondaries designed for 5V and 15V logic and OP amp power supplies.
- The "TT" series includes a number of coupling transformers, holding coils, and telephone associated devices for use in interconnective data modem terminals.

All Paraline stock power transformers may be used for 50 Hz or 60 Hz applications.

PARALINE CS SERIES

THE PARALINE CS SERIES WITH STANDARD 117V (50-60 Hz) PRIMARIES IS AVAILABLE FROM STOCK WITH SINGLE PRIMARY AND DUAL SECONDARY 6 PIN PRINTED CIRCUIT CONFIGURATION.

AVAILABLE TOTAL SERIES VOLTAGES AND CURRENT RATINGS OF SECONDARIES

PARALINE TT SERIES

TRANSFORMERS FOR DATA MODEM TERMINALS DESIGNED TO EXCEED 1200 VAC BREAKDOWN REQUIREMENTS.
FREQUENCY RESPONSE: 300-3500 Hz (TOL. 0.5 DB)
LEVEL: −45DBM TO +7DBM
DISTORTION: 0.4% MAX.
IMPEDANCE: ±10%
RETURN LOSS: 26 DB MIN.

PART NUMBER	PRI. IMP.	SEC. IMP.	FIG.

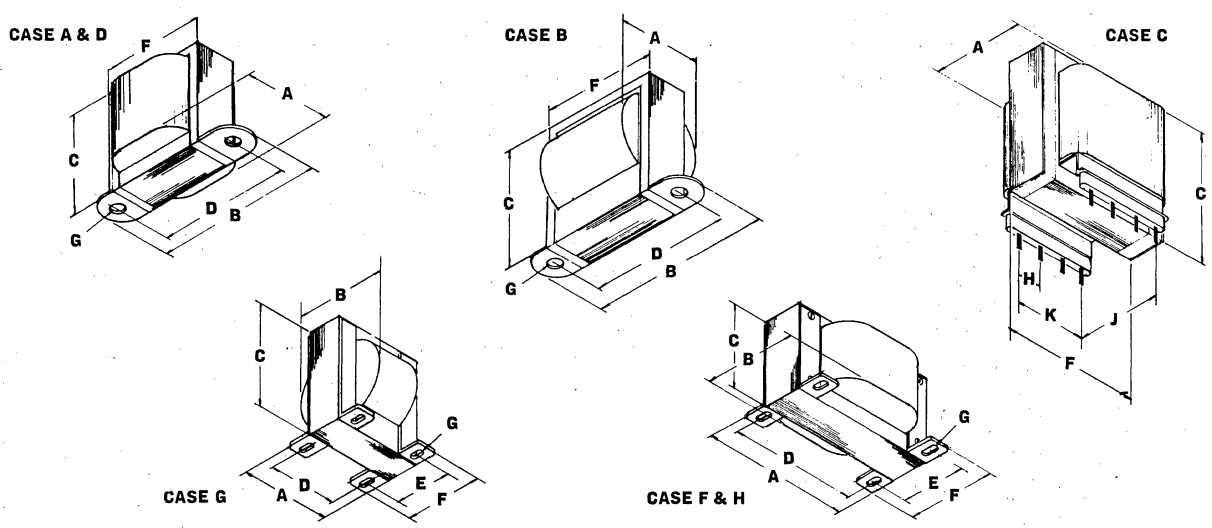
PINS LOCATOR



PARALINE, 511 South Palm Avenue, Alhambra, CA 91803 • Telephone (213) 281-0222

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

PICO Catalog Contents

22 PAGES OF MINIATURIZED TRANSFORMERS OPERATING OVER THE FREQUENCY RANGE OF 20 Hz TO 250 KHz, WITH PULSE TRANSFORMERS OPERATING TO 32MHz.

AUDIO TRANSFORMERS ARE ARRANGED ACCORDING TO SIZE WITH 1/4" X 1/4" (400 Hz-250 KHz) SHOWN FIRST, AND THE 3/4" X 13/16" (20 Hz-25 KHz) SHOWN LAST.

PULSE TRANSFORMERS .05μSEC TO 100μSEC WITH MINIATURIZED PLUG-IN CONSTRUCTION.

400 Hz POWER TRANSFORMERS. PRIMARY VOLTAGES OF 115V OR 26V. PLUG-IN CONSTRUCTION. ULTRA-MINIATURE SIZE.

ULTRA MINIATURE D C —D C CONVERTER TRANSFORMERS.

MICROPHONE/TRANSDUCER AUDIO INPUT TRANSFORMERS.

MINIATURIZED POWER INDUCTORS

EMI COMMON MODE SUPPRESSION INDUCTORS

MINIATURE HIGH "Q" INDUCTORS

Description	Page

SPECIFICATIONS

- MIL-T-27: All Units Meet MIL-T-27, Military Designation is TF5R21ZZ for Transformers, TF5R20ZZ for Inductors.
- FREQUENCY RESPONSE: ±3dB, 400 Hz-250 KHz at 1.0 Milliwatt.
- MAXIMUM DISTORTION: 5% With Rated Power Level at 1 KHz and 400 Hz.
- DIELECTRIC STRENGTH: All Units Tested at 200 V RMS.
- INSULATION RESISTANCE: Greater Than 10,000 Megohms at 300 V DC.
- WEIGHT: 1.1 Grams.
- OPERATING TEMPERATURE: -55°c to +105°c (All Units Can Be Supplied to Class S Requirements, +130°c).
- TERMINALS: Solid .012 Diameter Conductor. Conductor is copper clad steel, Tinned 100%. Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: 25 Cycles, Method 107D, MIL-STD-202E, Test Condition A-1.

*** **Discount Prices: 1-9 Net; 10-24 less 10%; 25-49 less 16%; 50-99 less 23%; 100-499 less 30%**

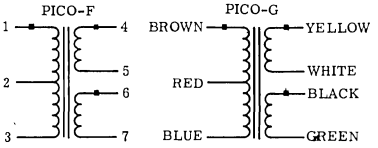
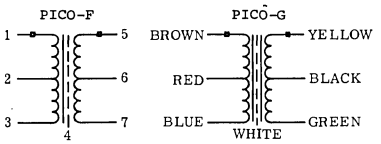
F SERIES Plug-In

G SERIES Insulated Leads

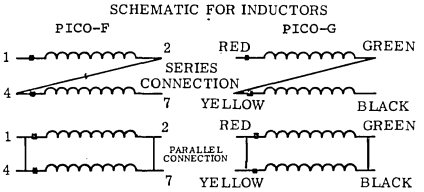
SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



SCHEMATIC FOR INDUCTORS



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- 5 MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

This Product is Patented

SPECIFICATIONS

- MIL-T-27: . . . . . All Units Meet MIL-T-27. Military Designation is TF5R21ZZ for Transformers, TF5R20ZZ for Inductors.
- FREQUENCY RESPONSE: . . . . ±3dB, 400 Hz-100 KHz at 1.0 Milliwatt.
- MAXIMUM DISTORTION: . . . . 5% With Rated Power Level at 1 KHz and 400 Hz.
- DIELECTRIC STRENGTH: . . . . All Units Tested at 200 V RMS.

INSULATION RESISTANCE: . . . Greater Than 10,000 Megohms at 300 V DC.

- WEIGHT: . . . . . 2.5 Grams.
- OPERATING TEMPERATURE: . . -55°c to +105°c (All Units Can Be Supplied to Class S Requirements, +130°c)
- TERMINALS: . . . . . Solid .016 Diameter Conductor. Conductor is Copper Clad Steel. Tinned 100%. Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: . . . . . 25 Cycles, Method 107D, MIL-STD-202E, Test Condition A-1.

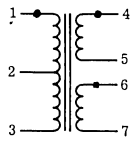
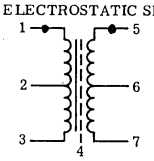
PICO's ultra-miniature transformers

W SERIES Plug-In

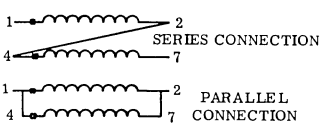
SCHEMATICS FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



SCHEMATIC FOR INDUCTORS



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

INDUCTORS

ALL INDUCTORS HAVE SPLIT WINDINGS AND MEASUREMENTS ARE LISTED FOR BOTH SERIES AND PARALLEL CONNECTIONS.

TWO VALUES OF INDUCTANCE, EACH AT A PARTICULAR VALUE OF DC CURRENT, ARE LISTED FOR EACH INDUCTOR.

Y-Series Plug-In	INDUCTANCE HENRIES	DC CURRENT ma	DC RESISTANCE OHMS	PRICES 1-9***

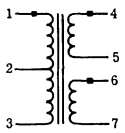
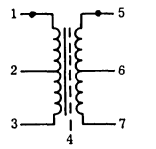
PICO's ultra-miniature transformers

Y SERIES Plug-In

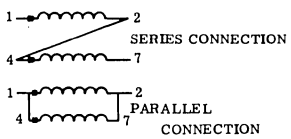
SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



SCHEMATIC FOR INDUCTORS



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS

This Product is Patented

Delivery— stock to one week

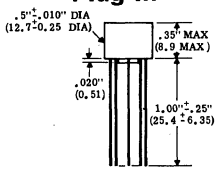
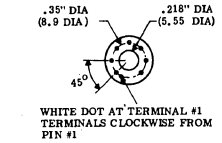
PICO's ultra-miniature transformers

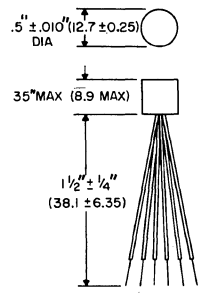
L SERIES Plug-In





WHITE DOT AT TERMINAL #1
TERMINALS CLOCKWISE FROM PIN #1

P SERIES Insulated Leads



Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27 . . . . . All Units Meet MIL-T-27 and are Hermetically Sealed in a Metal Case. Audio Transformers are Type TF5R21ZZ.
- FREQUENCY RESPONSE: . . . . ±3db, 300 Hz - 75 KHz At 1.0 Milliwatt
- MAXIMUM DISTORTION: . . . . . 5% With Rated Power Level at 1 KHz, 400 Hz and 300 Hz
- DIELECTRIC STRENGTH: . . . . All Units Tested at 200 V RMS
- INSULATION RESISTANCE: . . . Greater than 10,000 Megohms at 300 V DC
- WEIGHT: . . . . . 5 Grams
- OPERATING TEMPERATURE: . . -55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c maximum)
- TERMINALS: . . . . . Solid .016 Diameter Conductor. Conductor is Copper Clad Steel, Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: . . . . . 25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

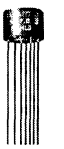
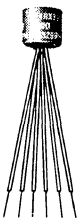
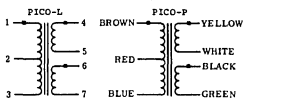
L SERIES Plug-In

P SERIES Insulated Leads

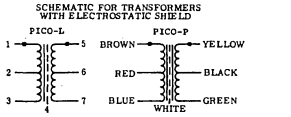




SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

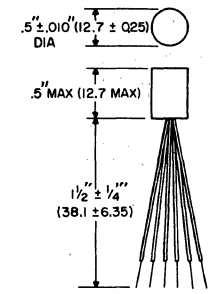
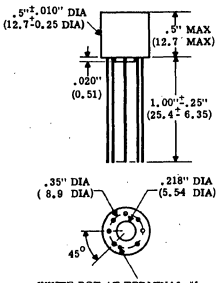
PICO's ultra-miniature transformers

K SERIES Insulated Leads



N SERIES Plug-In



Dimensions are in inches (MM)

SPECIFICATIONS

- **MIL-T-27** . . . . . All Units Meet MIL-T-27, and Are Hermetically Sealed in a Metal Case, Audio Transformers Are Type TF5R21ZZ.
- **FREQUENCY RESPONSE:** . . . ±3 db, 150 Hz - 75 KHz at 1.0 Milliwatt (When Primary Impedance ≧ 50K Ohms, ±3 db 150 Hz to 20 KHz)
- **MAXIMUM DISTORTION:** . . . . 5% With Rated Power Level at 1 KHz, 400 Hz and 150 Hz
- **DIELECTRIC STRENGTH:** . . . . All Units Tested at 200 V RMS
- **INSULATION RESISTANCE:** . . . Greater Than 10, 000 Megohms at 300 V DC
- **WEIGHT:** . . . . . 7.5 Grams
- **OPERATING TEMPERATURE:** . . -55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c maximum)
- **TERMINALS:** . . . . . Solid .016 Diameter Conductor. Conductor is Copper Clad Steel, Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452.
- **THERMAL SHOCK:** . . . . . 25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

Delivery: Stock to one week

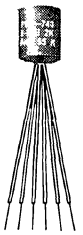
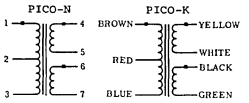
K SERIES Insulated Leads

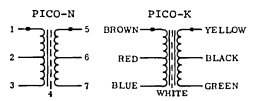


N SERIES Plug-In

SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

PICO Electronics, Inc.

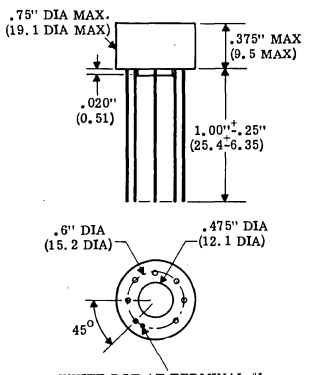
PICO's ultra-miniature transformers

R SERIES Plug-In



Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27: . . . . . All Units Meet MIL-T-27 And Are Hermetically Sealed in a Metal Case, Audio Transformers Are Type TF5R21ZZ.
- FREQUENCY RESPONSE: . . . ± 3 db, 75 Hz - 30 KHz at 1.0 Milliwatt.
- MAXIMUM DISTORTION: . . . 5% With Rated Power Level at 1 KHz, 300 Hz and 75 Hz
- DIELECTRIC STRENGTH: . . . All Units Tested at 200 V RMS.
- INSULATION RESISTANCE: . . Greater Than 10,000 Megohms at 300 V DC.
- WEIGHT: . . . . . 12 Grams
- OPERATING TEMPERATURE: . -55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c Maximum).
- TERMINALS: . . . . . Solid .016 Diameter Conductor. Conductor is Copper Clad Steel, Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: . . . . . 25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

This Product is Patented

Delivery— stock to one week

PICO's ultra-miniature transformers

R SERIES Plug-In

FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

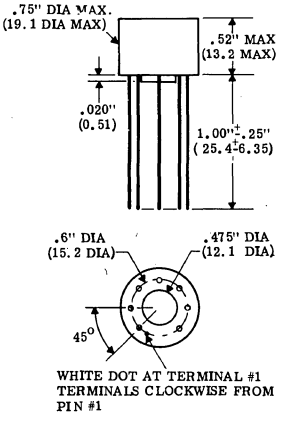
PICO's ultra-miniature transformers

S SERIES Plug-In



Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27: . . . . . All Units Meet MIL-T-27 And Are Hermetically Sealed in a Metal Case, Audio Transformers Are Type TF5R21ZZ.
- FREQUENCY RESPONSE: . . . ± 3 db, 50 Hz - 30 KHz at 1.0 Milliwatt. (±0.5 db, 300 Hz-5 KHz)
- MAXIMUM DISTORTION: . . . 5% With Rated Power Level at 1 KHz, 300 Hz and 50 Hz.
- DIELECTRIC STRENGTH: . . . All Units Tested at 200 V RMS.
- INSULATION RESISTANCE: . . Greater Than 10,000 Megohms at 300 V DC.
- WEIGHT: . . . . . 17 Grams
- OPERATING TEMPERATURE: . -55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c Maximum).
- TERMINALS: . . . . . Solid .020 Conductor, Copper Clad Steel Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452
- THERMAL SHOCK: . . . . . 25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

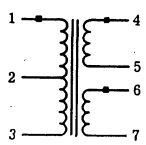
PICO's ultra-miniature transformers

S SERIES Plug-In

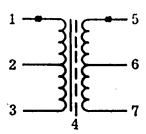
FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

SCHEMATIC FOR TRANSFORMERS WITH SPLIT SECONDARIES



SCHEMATIC FOR TRANSFORMERS WITH ELECTROSTATIC SHIELD



PICO Electronics, Inc.

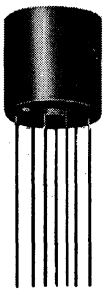
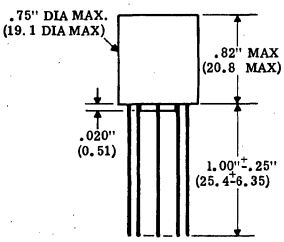
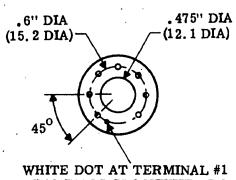
Delivery— stock to one week

PICO's ultra-miniature transformers

T SERIES Plug-In







Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-27: . . . . . All Units Meet MIL-T-27 And Are Hermetically Sealed in a Metal Case, Audio Transformers Are Type TF5R21ZZ.
- FREQUENCY RESPONSE: . . . ± 3 db, 20 Hz - 25 KHz at 1.0 Milliwatt.
- MAXIMUM DISTORTION: . . . 5% With Rated Power Level at 1 KHz and 300 Hz. 10% Distortion at 20 Hz.
- DIELECTRIC STRENGTH: . . . All Units Tested at 200 V RMS.
- INSULATION RESISTANCE: . . Greater Than 10,000 Megohms at 300 V DC.
- WEIGHT: . . . . . 28 Grams
- OPERATING TEMPERATURE: . -55°c to 105°c (All Units Can Be Supplied to Class S Requirements 130°c Maximum).
- TERMINALS: . . . . . Solid .020 Conductor, Copper Clad Steel Tinned 100%, Electroplated Per MIL-T-10727A and ASTM CCS B452
- THERMAL SHOCK: . . . . . 25 Cycles, Method 107C, MIL-STD-202D, Test Condition A-1

This Product is Patented

PICO's ultra-miniature transformers

T SERIES Plug-In

FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- PICO IS APPROVED QPL SOURCE (MIL-T-27)
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- PRIMARY AND SECONDARY WINDINGS CAN BE USED EITHER AS INPUT OR OUTPUT
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

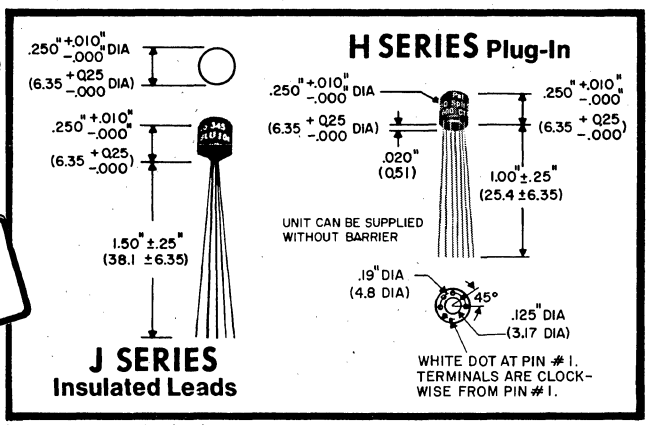
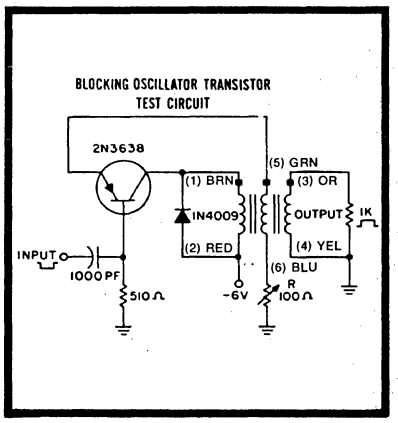
PICO's ultra-miniature PULSE transformers

1/4" x 1/4"





Dimensions are in inches (MM)

SPECIFICATIONS

- MIL-T-21038: Units Meet MIL-T-21038 and are Hermetically Sealed in a Metal Case
- DIELECTRIC STRENGTH: All Units tested at 200 V RMS
- INSULATION RESISTANCE: Greater than 10,000 Megohms at 300 V DC
- WEIGHT: 1.1 Grams
- OPERATING TEMPERATURE: -55°c to 105°c (All Units Can be Supplied to Class S Requirements 130°c maximum)
- TERMINALS: . . . . . Solid .012 Diameter Conductor. Conductor is copper clad steel, Tinned 100%. Electroplated Per MIL-T-10727A and ASTM CCS B452.
- THERMAL SHOCK: 25 Cycles, Method 107C, MIL-STD-202D. Test Conduction A-1

FEATURES

- EXTREME RESISTANCE TO THERMAL SHOCK
- ULTRA MINIATURE SIZE
- BUILT TO MIL-T-21038
- MAGNETIC SHIELDS AVAILABLE
- ELECTROSTATIC SHIELDING CAN BE ADDED
- VARIATION OF STANDARD DESIGNS AVAILABLE
- SPECIAL PRODUCTION TECHNIQUES ENSURE UNIFORM SIZE AND LEADS WHICH ARE FREE OF ENCAPSULANT. NO MENISCUS IN LEAD AREA.
- EVERY UNIT IN THIS CATALOG CAN BE MADE WITH A 300 THERMAL CYCLE GUARANTEE USING PICO'S SPECIAL SR CONSTRUCTION. CONTACT FACTORY FOR DETAILS.

Ultra Miniature DC-DC Converter Transformers

Input Voltages of: 5V, 12V, 24V and 48V

Power Levels up to 40 Watts

All units are magnetically shielded

All units can be supplied with higher or lower output voltages. (Example, size 2 can have output voltage of 400V D.C.)

Delivery- stock to one week, special voltages 9 days.

FEATURES

1) Units can be used as self-saturating or for linear switching applications. Operation over ambient temperature range from −55°c to +105°c. All units meet the requirements of MIL-T-27 (TF5S40ZZ)
2) All units can be supplied with higher or lower secondary voltages at the same power levels.
3) Secondary can be connected for full-wave bridge or dual bridge.
4) All units are magnetically shielded.

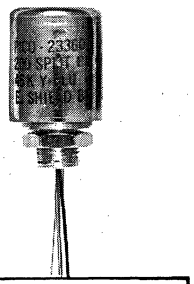
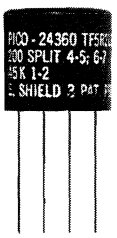
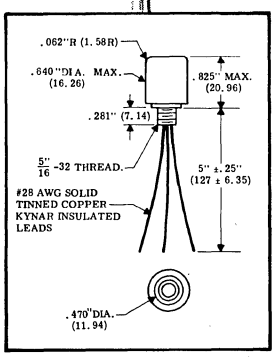
PICO Microphone/Transducer Audio Input Transformers

Used for Professional Sound Studios/Broadcast Mixing Consoles/Control and Instrument Amplifiers.

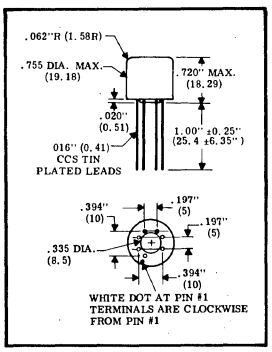
Interchangeable with transformers made by Beyer Dynamic of Germany.







NOTE:
ALL DIMENSIONS ARE IN INCHES, ( ) = MM



NOTES:
ALL DIMENSIONS ARE IN INCHES, ( )=MM.
CCS-COPPER CLAD STEEL, TINNED 100%.
ELECTROPLATED PER MIL-T-10727A AND ASTM CCS B452.

- ***Large step-up ratios with flat frequency response over the entire audio range.***
- ***Gapless laminations provide wide bandwidth with extremely low distortion. Use of two magnetic shields made with extra thick mu-metal and gapless core provide negligible hum pick up. All units provided with electrostatic shield.***
- ***Your choice of two package styles, stud mounting with flying leads or low profile plug-in. Identical electrical performance regardless of package style.***
- ***Frequency response ±1 dB, 30 Hz – 15 kHz.***
- ***Low profile plug-in (24000 series) meets MIL-T-27D (TF5R21ZZ).***
- ***Because of gapless laminations, unbalanced DC current should be avoided.***
- ***Typical distortion of 1% at power level of 0 dBm (1 Milliwatt), 30 Hz – 15 kHz. If the low frequency is raised, the power level for 1% distortion is as follows:***

50 Hz	-	3 Milliwatts (4.7 dBm)
100 Hz	-	10 Milliwatts (10 dBm)
300 Hz	-	150 Milliwatts (21.7 dBm)

For immediate engineering assistance or to place an order—
Call Toll Free 800-431-1064

All units have two extra thick mu-metal shields.

Delivery-Stock to 1 week

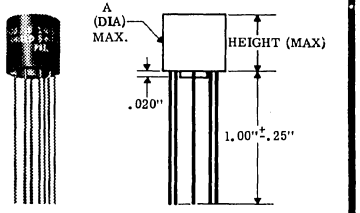
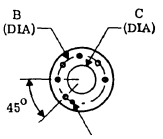
PICO's miniature 400 Hz transformers

115V/26V Primary
Printed Circuit Construction





WHITE DOT AT TERMINAL #1
TERMINALS CLOCKWISE FROM
PIN #1

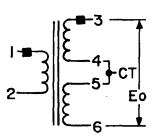
CASE SIZE	HEIGHT (MAX)	A (DIA) MAX	B (DIA)	C (DIA)
L	.35	.51	.35	.218
N	.5	.51	.35	.218
R	.375	.75	.6	.475
S	.52	.75	.6	.475
T	.82	.75	.6	.475

FEATURES

- 400 Hz Aerospace Application
- Smallest Possible Size
- Printed Circuit Plug-In Construction
- Secondary Has Split Winding (Secondary can Be Used at Half Voltage Twice the Current.)

SPECIFICATIONS

- MIL-T-27D (TF5S03ZZ)
- 90°c Ambient
- Input Primary 115v-400 Hz ±20 Hz or 26V-400HZ-±20 Hz (Your Choice-Just Choose The Proper Part No.)
- Regulation is 24% (T Units Have Regulation of 17%)
- Secondary Voltage Adjusted to Nominal Value at Half Load.



SERIES CONNECTED SECONDARY

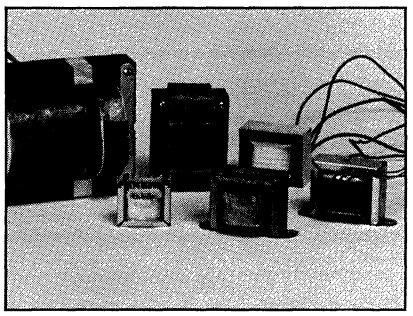
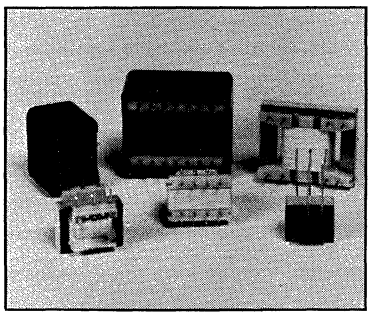
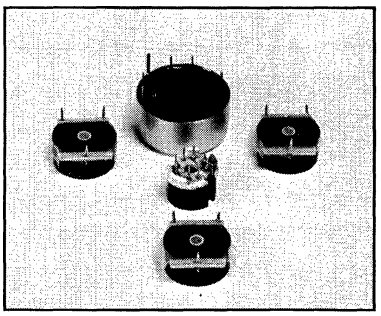
Precision Components

Custom Transformers and Inductors







Power Transformers

- Isolation up to 1 KVA
- Converter DC to DC
- Constant voltage up to 1 KVA
- Ringing
- PCB Plug-in
- Wall Plug-in

Audio-Frequency Transformers

- Dimmer
- Filament
- Line
- Matching
- Output
- Pulse
- Rectifier
- Telephone
- Coupling
- Hybrid

Inductors

- Payback
- Toroidal
- High Frequency
- Repeat Coils

DESIGN SPECIFICATIONS SHOULD INCLUDE:

1 Input voltages and frequencies
2 Secondary full load voltages and currents
3 Regulation of secondary voltages, if required
4 Rectifier type, if DC output is required (half wave, full wave center tap, full wave bridge, voltage doubler, etc.)
5 Type of filter circuit (choke or capacitor input, etc.)
6 DC full load voltage and current at filter input
7 DC regulation, if required
8 Static and magnetic shields
9 Ambient temperature in which the transformer is to operate
10 Any limiting dimensions
11 Preferred mounting type and dimensions, if any
12 Type of leads or terminals

1 Operating level
2 Open circuit impedance or enductance of any winding (usually primary), if required
3 Value of DC, if any, flowing through any winding
4 Impedance or turns ratio
5 Source and source impedance
6 Load and load impedance
7 Frequency response with permissible deviation, from a reference frequency, generally 1000 Hz
8 Permissible harmonic distortion at specified operating level and frequency
9 Minimum resonant frequency
10 Insertion loss
11 Longitudinal balance, if required
12 Hybrid balance, if required
13 Return loss, if required
14 DC resistance
15 Any limiting dimension
16 Preferred mounting type and dimensions
17 Type of leads or terminals

1 Inductance
2 Alternating voltage across the coil
3 Direct current through the coil, if any
4 Test frequency
5 DC resistance
6 Self-resonance frequency
7 Minimum Q over frequency range
8 Frequency of maximum Q
9 Shielding, if required
10 Size and weight limitations
11 Mounting type
12 Type of leads or terminals
13 Insulation requirements

Precision Components, inc.

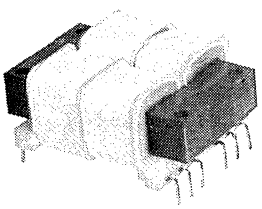
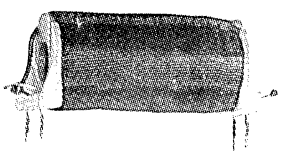
THE ONE-STOP SOURCE

For All Your Magnetic Component Needs

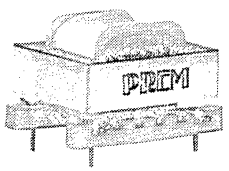
PREM has it all with 6 engineers, all specialists to assist with your custom designs. — Or you can select from any of these standard product lines each with dozens of varieties to choose for your application.



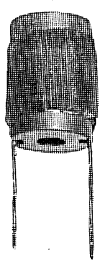
Low profile PC power transformers



Ferrite power inductors bobbin cores and slug cores

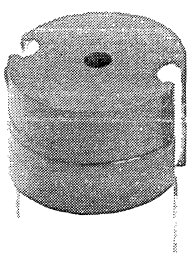


Ultra-compact hybrid transformers and feed-bridge inductors

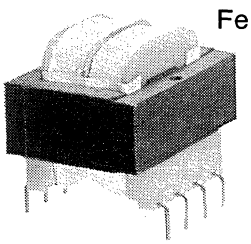


Ferrite power inductors drum core type

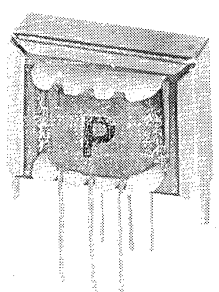
Economy high current inductors



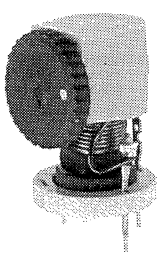
Power pot core inductors



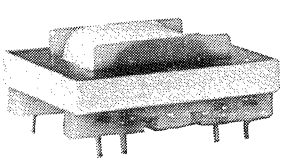
Horizontal, 3 flange PC power transformers



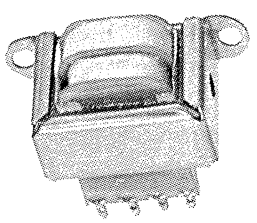
Economy audio transformers



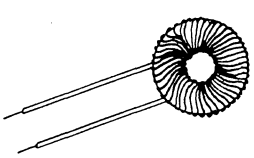
Adjustable linearity coils



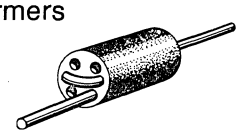
Telephone coupling transformers



Horizontal 3 flange power transformers



Precision toroidal inductors



Shield bead ferrite chokes

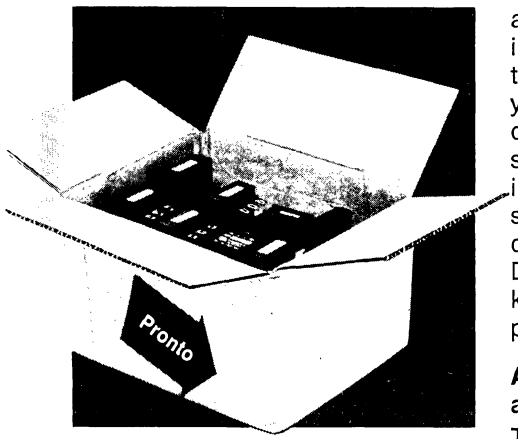
THE SIGNAL WAY OF DOING BUSINESS



PRONTO 48-Hour Shipment

We have long recognized that, in most instances, engineers and buyers need immediate delivery of transformers and chokes. To meet this challenge, Signal maintains an extensive inventory of every item in these pages — over 1,000 different transformers and chokes. More importantly, we're dedicated to shipping out each and every order (1-4 pieces guaranteed) within 48 hours, and we can usually fill your entire order. We call this service "PRONTO." Last year we shipped over 10,000 such orders and we didn't disappoint anyone.

How and Why We Are Able to Maintain Our Low Price Policy

At Signal, we sell direct. There are no salesmen or distributors — no middlemen, no extra mark-ups. We pass the savings on to you. We answer your questions directly. There is no chance of misinterpretation and you get fast accurate answers. We maintain larger inventories than any distributors could. We're able to react to your order requirements more quickly and efficiently. These savings have enabled us to install modern machinery, specify better materials and continuously invest in new R & D. In this manner our prices are kept as low as possible. We both profit from this policy.

Advanced Technology and Innovation

The basic transformer concept and design has been with us for many years. But, the state-of-the-art in electronics has changed drastically in the last 20 years, especially the last ten. We now live in a digital as well as analog world. Circuit size has shrunk and new termination methods have evolved. Again, Signal has recognized the need to develop new designs to meet these new low weight and height constraints. The result has been the development of such new and exclusive products as the SPLIT/TRAN® (see opposite page), the miniature PC board transformer featuring non-concentric windings which result in high isolation and the elimination of the need for electro-static shielding. The FLATHEAD® which has a height of only 0.65" is still another example of creative innovation. Therefore, what many of our competitors call custom designs (matched by custom prices) often turn out to be a Signal standard product. You can depend on Signal to have the products you need when you're ready for them and, of course, always in stock.

Custom Requirements Are Welcome

We also recognize that no matter how hard we try, it is impossible to anticipate everyone's need. Therefore, we are eager to discuss and evaluate your transformer and choke requirements. If we can't recommend a standard product that will do the job and save you money and time, we'll gladly quote on your requirement. Many times all that is needed is a modification of one of our standards. Again, you will get consistently high quality and very competitive prices, whether your order is for 10 or 10,000 pieces.

We don't have anyone out in the field telling you how good we are. We have to prove it to you by deed. Thank you for considering Signal.

7	36	2⅝	2⅜16	1⅝16	†	.400	.400	1.850	†	1.1

* Available from Signal: Part No. ST-MS (Screw) & Part No. ST-MN (Nut).
† Size 7 has 4 mtg. holes on 2⅜16 x 1¾ centers for a #6 screw. Need not be nylon.

"Split-Tran" transformers combine the best features of our "2-4-1" Series and Signal's pioneering line of pc board miniature transformers.

The use of a "split bobbin" allows the primaries and secondaries to be wound non-concentrically, i.e., side by side rather than one over the other. This results in cost savings and superior performance, namely:

- High isolation — **2500V** hipot is standard.
- Low capacitive coupling — no electro-static shield necessary.
- Less manufacturing time — no cross-overs of primary and secondary leads.
- PC pins — allow direct insertion in PC boards.
- Class S insulation — 130°C.

Each transformer is available with single 115V or dual 115/230V primaries. In addition, secondaries are split so that they can be series or parallel connected.

Special variations will be quoted and shipped promptly.

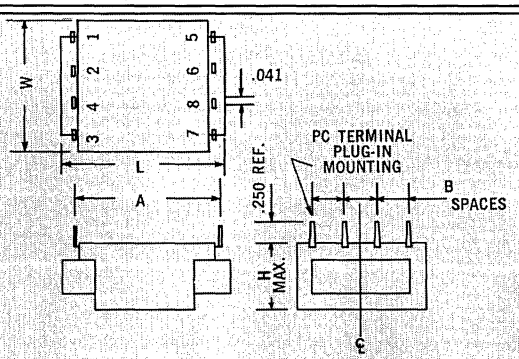
* Regulation of Size 2 and 6 units is 30%, i.e., no load-secondary voltage is 30% higher than full load. Regulation of Size 12 units is 20%.



Size	L	W	H	A	B	Oz.
2	1⅞	1⅝	0.650	1.600	0.375	5
6	1⅞	1⅝	0.850	1.600	0.375	7
12	2½	2	1.065	2.000	0.500	11

LOW PROFILE: Allows ¾″ card spacing for 2.5va units, 1 inch card spacing for 6va units, or 1¼″ inch card spacing for 12va units.

DUAL PRIMARIES: 115/230v, 50/60 Hz.

NON-CONCENTRIC WINDING: Where secondary is wound alongside primary rather than directly over it. This added isolation reduces inter-winding capacitance and **eliminates the need for an electro-static shield.**

1500V. RMS HIPOT: Is standard because of the advantage of non-concentric windings.

HUM-BUCKING CONSTRUCTION: (Semi-toroidal) results in reduced radiated magnetic field and balanced windings.

The LP line of transformers is ideal for low height, critical pc board power applications in semi-conductor control and instrumentation. They are used extensively in single or dual output dc supplies and isolated control circuit and reference supplies.

p.c. board transformers for triple-output regulated supplies

IDEAL FOR MICROPROCESSOR APPLICATIONS

"MP" types have been developed specifically for use in triple-output regulated DC supplies that are commonly used in **Microprocessor Circuits** and other logic, op-amp combinations. Two output combinations have been provided, namely 5V and ±12V, and 5V and ±15V.

All "MP" units are rated in terms of the final **DC** output after a standard three terminal IC regulator. They are designed to provide these outputs with AC line inputs of 100 to 130V 50/60 Hz (or 200 to 260V for nominal 230V lines).

Two basic mechanical configurations are available. Standard PC types (MPC or DMPC) are tested to pass 1500V RMS hipot. Optional mounting brackets are available. MPL types are based on Signal's "flat-head" style and feature low profile, 115/230V primaries, hum-bucking construction, 1500V RMS hipot and the advantages of non-concentric winding (low inter-winding capacitance, high isolation, and no need for an electro-static shield).

All MP's are stocked in depth for immediate delivery. In addition, special variations can be supplied with reasonable delivery times.

BLACK DOT ON LABEL INDICATES POSITION OF TERMINAL #1.

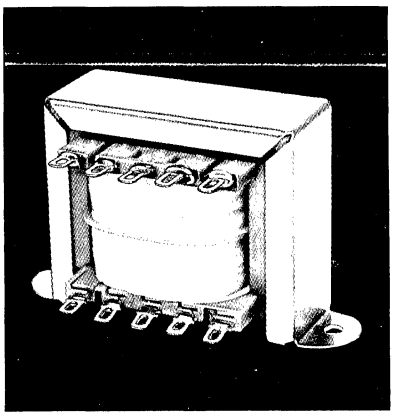
2-4-1 style split-bobbin transformers for triple-output (μp) applications (type MT)



Signal has extended its line of triple-output transformers for microprocessor applications with three new sizes rated to 100VA (35 watts DC regulated). Similar to the split-bobbin design used in Signal's "2-4-1" series, the chassis-mounted style allows for these new higher power applications.

Two output combinations are provided: 5V and ±12V; and 5V and ±15V. Designated "MT" (single primary) and "DMT" (dual primary), these transformers are rated in terms of the final DC output after a 3-terminal IC regulator. They are designed to provide these outputs with AC line inputs of 100-130V, 50/60 Hz (or 200-260V for nominal 230V lines). All auxiliary components required to complete the DC supply are tabulated.

All MT types are stocked in depth for immediate delivery. In addition, custom variations can be supplied with minimal turnaround time.

. . . for printed circuits applications

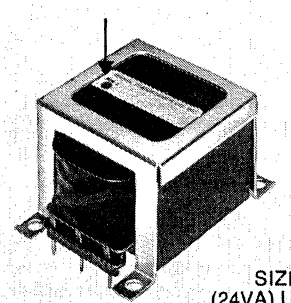
Signal has the most complete and diversified selection of miniature plug-in power transformers.

Primary ratings of 115V (Style PC - 6 Pin) or Dual 115/230V (Style DPC -8 Pin) are standard for the entire line. 1500V. Hipot is standard.

Size 1.0 is used extensively where height is a limiting factor since its height of 0.83 inches allows 1 inch spacing of PC boards. Size 24 is unusual since 24 watt PC transformers are not readily available, especially with a height of 1⅜ inches.

The RMS current ratings are based on a load regulation of 15-20% and not on temperature rise (except for the largest item, size 24). Therefore, these ratings may be exceeded without overheating, if the additional drop in full load voltage is acceptable. There is, of course, a limit and it would be best to check with our engineering department on specific units.

BLACK DOT ON LABEL INDICATES POSITION OF TERMINAL #1.



SIZE 24 (24VA) UNIT WITH 24-BR SLIDE-ON MOUNTING BRACKET

METHOD OF DETERMINING SECONDARY CURRENT RATINGS

The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

cut size and weight with "2-4-1"

The 2-4-1 series is an illustration of the use of creative design applied to small power transformers. The result is a line where, for a given va rating, size and weight are reduced almost 50%. Hence the name "241" series.

- GRAIN ORIENTED CORE — High Saturation Density — Lower Core Loss — Less Steel and Copper.
- BOBBIN WOUND — Maximum Utilization of Winding Area — Space and Size Reduced.
- SPLIT BOBBIN — NON-CONCENTRIC WINDING — Lower Capacitance — Better Insulation — 2500V RMS Hipot — No need for Electro-Static Shield — High Isolation and Insulation Resistance. No Cross-Overs of Primary and Secondary Leads.
- SPECIAL TERMINAL — Solder or Quick-Connect.

The series is available with single 115V or dual 115/230V primary, rated 50/60 Hz. Class S insulation is used for a maximum total temperature rating of 130°C continuous.

AVAILABLE WITH SINGLE (115V) OR DUAL (115/230V) PRIMARIES

△Available with dual primary only. Therefore, prefix "DL" is not required.
‡ Nominal 115V primary has added taps, I.E., 105/115/125V, Dual (DL) version is 115/230V only.

Items shown in shaded area are not normally in stock. They are standard designs generally available in 3-4 weeks.

All transformers are designed conservatively and are rated for 50/60 Hz. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss varnish. The transformers and chokes are rugged in construction, well insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation. Hipot rating of 1500V RMS is standard.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings, which may be series or parallel connected as indicated in rating chart.

*The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

signal TRANSFORMER

filter chokes

1.0 TO 200 AMPS

Signal's line of filter chokes is the most extensive available. It is designed to complement the selection of Rectifier Power Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full DC current. All resistance ratings are maximum values. Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

Signal's Dual Chokes are supplied with 2 windings which may be series or parallel connected with rating shown on chart. This line is basically designed for application requiring lower inductance value at high currents, such as low voltage, DC supplies or SCR filters.

step down auto transformers

50/60 Hz 100-2000 VA — 230/115V

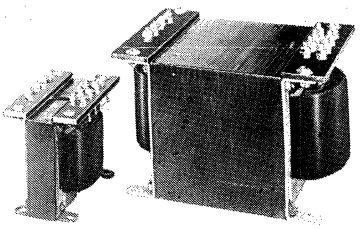
power isolation transformers

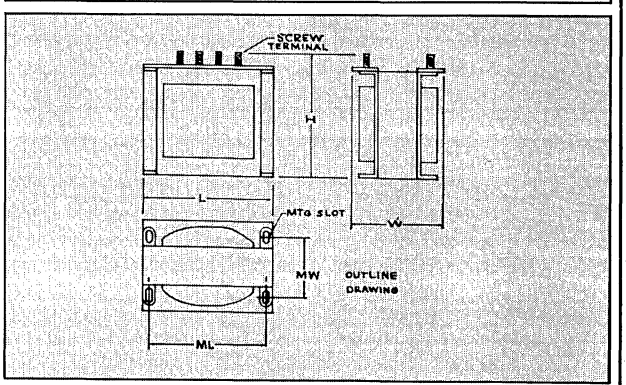
INDUSTRIAL GRADE/STEP-UP OR STEP-DOWN. MANY POSSIBLE VOLTAGE RATINGS.



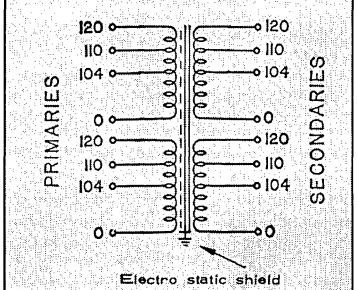
AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "SU" lines are designed for a maximum of 55°C rise above ambient for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated and have a consistently uniform appearance. All ratings are at full load current, continuous operation. 2500V. RMS Hipot is standard.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers (10-32 on ¼ and ½ KVA, ¼-20 on larger sizes). Connections can be easily made with a nut driver. It is also simple to alter the interconnections to change transformer ratings. **Electro static shields are provided grounded to the core.** The connection is made with a lug to ground and may be opened if an ungrounded shield is desired.



DU SERIES 110/220 Dual Primary to 110/220V. Dual Sec. (Primary & Secondary may be reversed)



As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts. It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is doubled.

FIG. H

Staco variable transformers offer versatility and reliability unmatched by solid state voltage controls. Staco controls are used worldwide for industrial and laboratory applications to control voltage, current, power, heat, speed, light and electro-mechanical force. Staco variable transformers provide continuously adjustable output voltage from AC power sources without wave form distortions or SCR generated noise. Outstanding features include gold-plated commutators, precise regulation, high efficiency, conservative ratings and rugged construction.

You can select from panel mounted types, cord and plug types, ganged and/or motor driven types, metered types, and fully portable power supplies with or without meters, and ratings from 0.8 amps to 540 amps, 40 volts to 560 volts for single or three phase applications.

Staco has a nationwide network of distributors qualified to offer technical assistance whenever you need it. Additionally, the Staco Engineering Staff is available to help you with special or non-standard applications. Staco's Variable Voltage Controls handbook will be sent to you upon request ... it's loaded with illustrations, engineering data, specifications and ordering information on standard voltage controls. Prices shown are list prices at press time and are subject to change.

Ammeter equipped models available. Change suffix V to A.

FIG. K

VARIABLE ISOLATION TRANSFORMERS *120 VOLT INPUT SINGLE PHASE*

An exclusive by STACO, for use where the safety of isolation is required. The output voltage is completely isolated from the power line (input voltage). On uncased models, when proper external connections are made between windings, it is possible to increase the voltage or current output or input through non-isolated, voltage doubler, or series connection.

FIG. M

AC POWER SUPPLIES *120 VOLT SINGLE PHASE*

Portable AC Power Supplies are ideal for labs or test bench use. Housed in a ventilated steel and aluminum enclosure with carrying handle, each model is complete with a three-conductor line cord, plug & matching receptacle, pilot light, switch and circuit breaker. Metered models are available with Voltmeter, Ammeter or a Wattmeter (or a combination of meters).

POWERSTAT® *Variable Transformers now*

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight,* only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

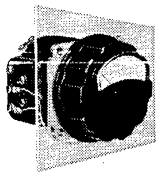
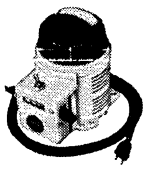
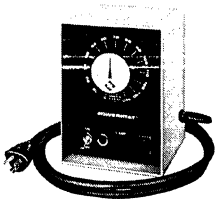
STATIONARY METERED KNOB TYPES

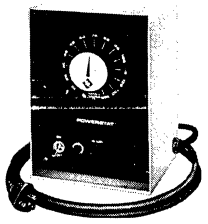




ENCLOSED TYPES



TYPE L10B



TYPE L116B

Single units (those listed in charts without -2 or -3 suffixes) in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 series are also available with metered knobs. Stationary voltmeter does not turn with knob. Voltmeter accurate within ±3% of full scale and insensitive to stray magnetic fields. When ordering, add VS prefix to type number. *Back-of-panel* mounted types in the 21-22 through 146-246 series can be combined with Metered Knob Assemblies. Existing models can be retrofitted also. Assembly type VS150 has a 0-150 volt scale and type VS300 has 0-300. Types VS116B, VS3PN116B and VS3PN136B are available off-the-shelf from distributor stock.

Designed to meet OSHA requirements. Portable 120 volt, single-phase units have grounded NEMA cord-plug assembly, on-off switch, grounded output receptacle, pilot light and fuse. Panel controls are recessed for protection from accidental bumping. Slots at rear for wall hanger brackets. Type L10B rated 0-132 volts, 1.75 amp; type L21 rated 0-140 volts, 4.5 amp; type L116B rated 0-140 volts, 10 amp. All available off-the-shelf from distributor stock.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

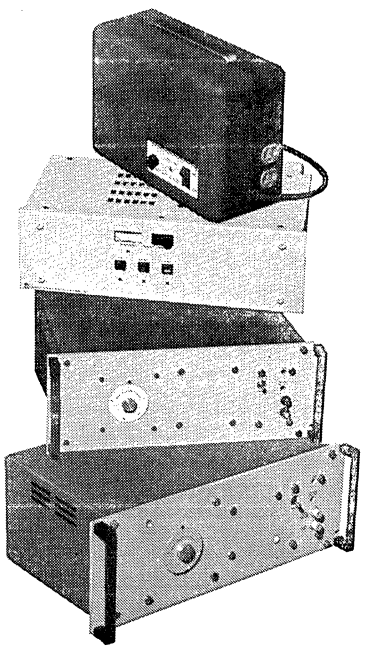
The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

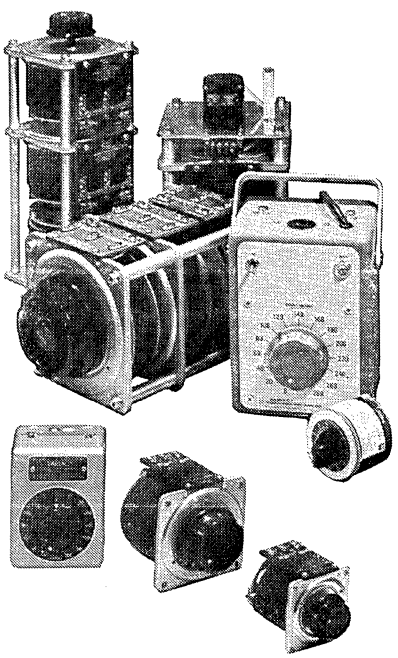
The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

Variac® now by Technipower





Variac® Autotransformers and Voltage Regulators, an industry synonym for prestigious power control products, has joined the Technipower family as part of an ongoing program for supplying an increasingly wider range of high quality equipment.

Voltage Regulators

Here is a select group of Automatic Voltage Regulators which will control large industrial loads while protecting sensitive equipment and encouraging peak component performance. Add to this, extremely fast response with virtually no waveform distortion, fast correction and smooth control of voltage. Also assured is freedom from voltage jumps that can be introduced by switching controls. These Automatic Voltage Regulators utilize an auxiliary unit that will multiply the variable transformer power rating while a solid state device senses and controls. Choose from among 5 basic models with 100 variations of same, in addition to custom built units. Variac by Technipower — your prime source for quality power control products. Send for catalog.

Autotransformers

The industry standard and an outstanding value. Variac Autotransformers are available in 120, 208, 240 and 480 Volts and in single and 3 phase models, both manual and motor driven types. Efficient, cool running and overloadable 1000% (short term) load, Variac Autotransformers will generate output voltages from 0 to line or above line voltage, with outstanding efficiency and regulation. They function independent of load size or power factor, are quiet, reliable and easy to install. More than 700 standard Variac Autotransformers are offered in this category with as many as 1000 possible product variations manufactured to custom order. Technipower produces all Variac Autotransformers and Voltage Regulators at its plant in Connecticut.

Backed by a One Year Warranty.

High Reliability Power Conversion
See EEM page 3•1721 for complete description of Technipower's "Mil-Qual" Encapsulated and Open Frame Modular Power Supplies.

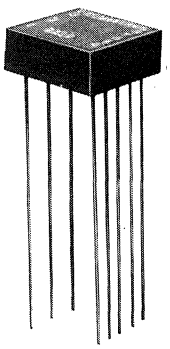
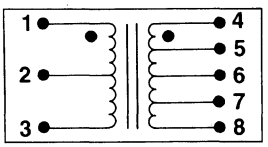
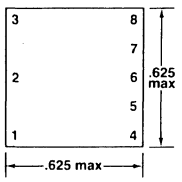
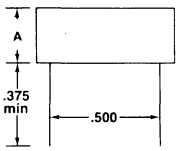
TRANSFORMERS INTERFACE MIL-STD-1553

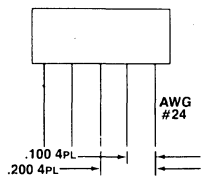
The following units have been designed to meet the requirements of MIL-T-21038 Grade 5 or 7, Class S for Low Power Pulse Transformers. They are designed specifically to meet specification for interface transformers as described by MIL-STD-1553.











HIPOT = 100V$_{RMS}$
IR ≥ 10K$_{MEG}$ Ω @ 250 $_{VDC}$

PART NO.	TURNS RATIO	PRIMARY	SECOND-ARY	% DROOP	CMR (Typical)	"A" (Max.)

WHY TECHNITROL?

SIZE — Large enough to handle your high quantity requirements. Small enough to respond to your special applications.

FLEXIBILITY — (3) manufacturing plants to accommodate a wide variety of transformer types and order quantities.

STABILITY — Over 30 successful years in a highly competitive marketplace and now stronger than ever.

EXPERTISE — Competent, innovative engineers and technicians assisted by computer using our own design programs.

QUALITY — Not just 30 years in the business, but 30 years of being the **best** in the business.

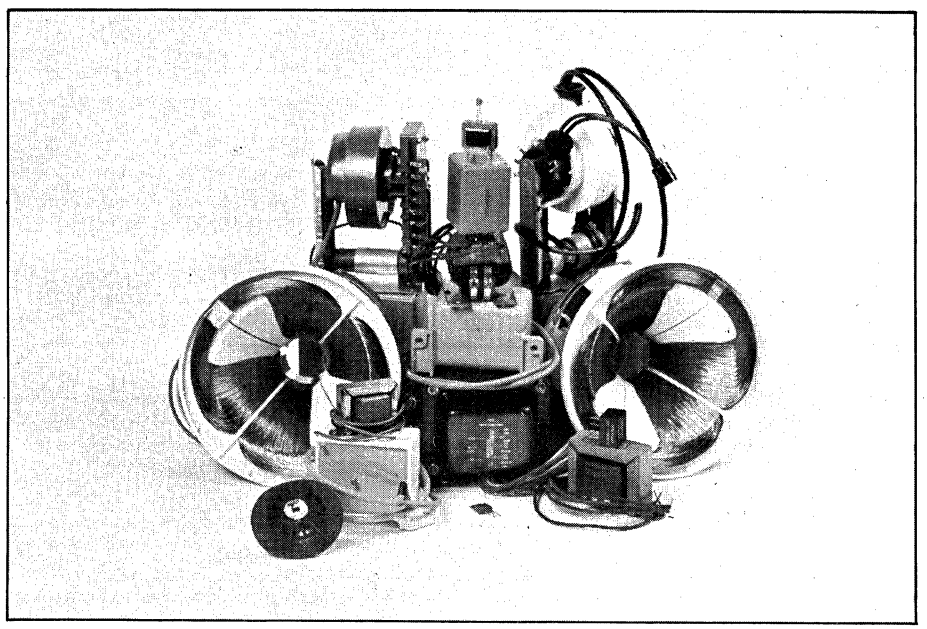
THORDARSON provides pre-engineered

STANDARD AND NEW DESIGN

THORDARSON manufactures over 8,000 varieties of standard electro-magnetic products. We can supply you with any component we made since our beginnings in 1895 — many models are impossible to locate elsewhere. Components of today's technology are readily available. THORDARSON is fully engaged in the electronic industry's new designs for travel (space, ocean, ground and air), communication, medical, defense and entertainment.



PRE-ENGINEERED DESIGNS

Among these may be the product that is perfect for your requirements. Request our catalog and check specifications. Included in these designs are:

- **Audio/Power/Transistor/Filament/Line Adjusting Transformers**
- **Inductors**
- **Flybacks and Yokes for CRT Displays**

MILITARY

Government, military, subcontractors and manufacturers require high quality transformers made to exact specifications with tight tolerances. THORDARSON's experience excells in this area and has for many years. Listed are just a few of the many Mil-specifications and UL standards that are adhered to.

Mil-T-27	Mil-Q-9858	UL-506
Mil-E-5400	Mil-I-45208	UL-544
Mil-T-21038	Mil-STD-45662	UL-697

Now the choice is yours. To save time you can select from 8,056 pre-engineered Thordarson electromagnetic products. Or if you have time our engineers will design a product to meet your needs.

or custom designed products

CUSTOM DESIGNS

HIGH VOLTAGE SWEEP TRANSFORMERS

THORDARSON produces High Voltage Sweep Transformers with silicone as well as epoxy encapsulation. Several hundred standard designs are available for the commercial television industry. Also attainable are custom designs for the monochrome and color graphic monitors used in the computer and electronic game industry. NEW innovative patented designs have recently been announced regarding our fully integrated High Voltage Sweep Transformers.

DEFLECTION YOKES

High resolution color and monochrome Deflection Yokes are produced by THORDARSON. Special custom designing of color and black and white Deflection Yokes are created in addition to the many standard yokes designed for the commercial television industry.

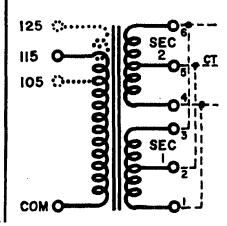
PARALLEL HOOKUP



TODD SYSTEMS "HIGH CURRENT TRANSFORMERS & CHOKES" are designed for use in high power rectifier circuits, and high current A.C. applications. "TODD ENGINEERED" designs feature a nominal temperature rise of 45°C., at full load, thus providing outstanding overload capacity. All designs utilize extremely low regulation, varying from 10% in the smallest to 1% in the larger units. Four styles . . . select the type best suited for your lab, test rigs, OEM or production equipment

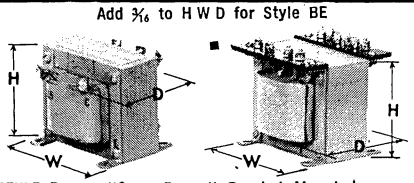
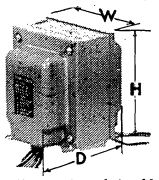
Add 3/16 to H W D for Style BE

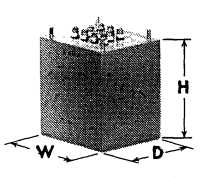


STYLE B: • "Open Frame" Bracket Mounted • Double Vacuum Varnish Impregnated

STYLE BE: • Conforms to MIL-T-27B • Epoxy Encapsulation added to Style B



STYLE V: • Fully Enclosed in Metal Shells • Ease of "Wiring with Leads" • Attractive Appearance • Dbl Vacuum Varnish Impregnated



STYLE CM: • Hermetically Sealed to MIL-T-27B • Environment Proof • Attractive Gray Finish • Permanent Name Plate

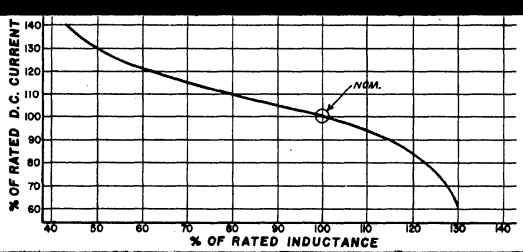
SCREW TERMINALS

HIGH CURRENT CHOKES — 50/500 HERTZ — DIMENSIONS REFER TO HIGH CURRENT XFMR SKETCHES



- **Matching styles complement high current transformers**
- **Wide variety of compatible current ratings**

INDUCTANCE VARIATION

Graph indicates typical variation of inductance (%) when used at D.C. currents (%) other than the rated values.

Chokes operated at D. C. currents higher than rated value must be run on an intermittent basis to avoid overheating.

QUALITY ENGINEERED — PRECISION BUILT

TODD SYSTEMS INC.

50 ASH STREET. YONKERS, NY, U.S.A. 10701 (914) 963-3400

50/60 Hz TOROIDAL POWER TRANSFORMERS CUSTOM MADE OR STANDARD

LOW WEIGHT	Typically less than half the weight of stacked core transformers.
SMALL DIMENSIONS	Low height allows slim compact design of electronic equipment.
EASY MOUNTING	Washer mounting requires only one single bolt to the chassis.
LOW HUM	Continuously rolled core has no airgap. No loose parts to rattle.
LOW STRAYFIELD	Primary and secondary windings are distributed evenly along the core, which has no airgap.
SMALL NO-LOAD LOSSES	Typically less than ¼ of the no-load losses of ordinary stacked core transformers.
MEETS ALL SAFETY REQUIREMENTS	TOROID transformers are made to meet all major safety regulations such as US (UL 1411), Scandinavian (SEMKO 115, etc.), West German (VDE 550) and Swiss (SEV). 4000V RMS insulation is standard.
CUSTOM DESIGN	Our application engineers will help you to select the best transformer for your application, and will also custom design a rectifier transformer from DC data. Prototypes can be delivered 2 to 3 weeks after order.

Complete Data and Application Notes available on request.

GENERAL INFORMATION

Both standard and custom made transformers are made on standard core sizes (see table on left). Non-standard core sizes can be made for large volume users to meet special size requirements. Cores are tape-wound from grain-oriented silicon steel and heat-treated for optimum performance.

Both ends of windings are normally taken out as 8" leads with colored PVC tube insulation. Taps can be formed by external interconnection of leads.

Temperature rise.
TOROID transformers are normally designed for a temperature rise of 60-70°C (140-158°F). The steady-state temperature in a transformer depends on the mounting environment.

Inrush current.
Due to absence of air gap and good magnetic properties of the core material, the inrush current at power-on is higher than in stacked core transformers. Slow fuses should be chosen for primary circuit protection, especially for transformers over 300 VA.

Static shielding.
A static shield to minimize capacitive coupling between primary and secondary is available as an option. The shield occupies space and thus reduces the effective output power of the transformer.

Magnetic strayfield.
The strayfield from a well made toroidal power transformer is very insignificant compared to the strayfield from a conventional stacked-core transformer. The small residual strayfield from a TOROID transformer can, if required, be further reduced by means of a thin ring of magnetic material fitted as a belt around the toroid.

3-phase transformers.
A 3-phase toroidal transformer consists of three separate units that can be mounted individually or stacked upon each other, depending on available space.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module

TRANSFORMERS

SUBMINIATURE AUDIO TRANSFORMERS

LT & LS SERIES
LU SERIES

The LS Series is electrically and mechanically the same as the LT Series except for phase relationships between terminals.

LS, LT, and LU Series transformers have successfully passed the rigid requirements of MIL-T-27, Class S, Grade 5.

Subminiature in size, weighing less than 0.1 ounce, these transformers have tenth inch grid spacing between terminals and are ideally suited for transistor circuit applications which utilize printed circuit board design. All three series have risers on mountng surfaces to facilitate inspection and board cleaning and also to prevent moisture traps.

A wide range of standard designs are available which meet the requirements of most common applications and allow for rapid delivery of prototype quantities. Special designs are also available in all three types.

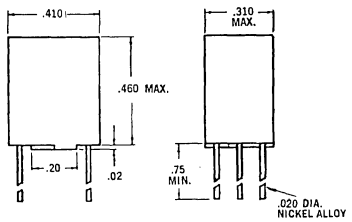
The new LU Series exhibits the same electrical characteristics as the LS and LT Series but has been packaged in a "thin line" configuration to allow for closer board spacing for "card cage" applications or where height dimensions are critical.

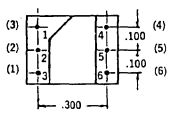
MAGNETIC SHIELDING

LS, LT and LU Series transformers are available with magnetic shields.

To order transformers with shields installed, add 500 to dash numbers shown in the table below. For example: to order an LS-22 with shield, specify LS-522.

LS/LT SERIES

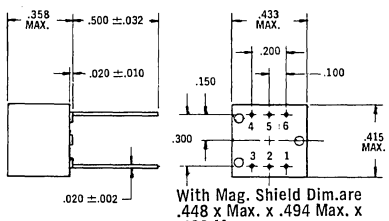




WT. 0.1oz

With Mag. Shield Dimensions are .356 Max. x .465 Max. x .531 Max.

LU SERIES



With Mag. Shield Dim.are .448 x Max. x .494 Max. x .400 Max.

Mech. Tol. = ±.010 unless indicated.

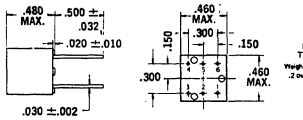
TRANSFORMERS

SUBMINIATURE AUDIO TRANSFORMERS

Torotel LA and LB series transformers are manufacturered to MIL-T-27, Grade 5, Class S specification. These series have 0.1 grid spaced terminals for printed circuit application. Both types have risers on mounting surfaces to prevent the formation of moisture traps and to facilitate cleaning of board assemblies.

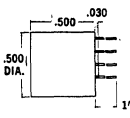
The LA Series is electrically the same as the LB Series, but is packaged in a .460 inch cube with smaller outline dimensions for application where this configuration is more suitable.

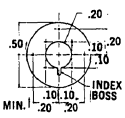
Leads are made of 20 AWG tinned copper. Units utilizing Dumet wire are available on special request.



LA TYPE Weight less than .2 ounces (6g)

LB TYPE Weight less than .2 ounces (6g)





† LB DIMENSIONS WITH SHIELD O.D. .580 MAX. HT. .580 MAX.

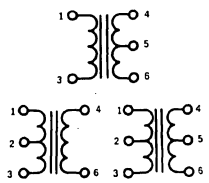
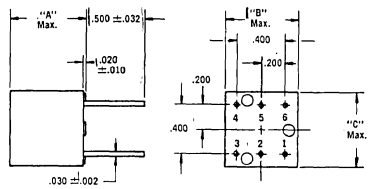
TRANSFORMERS

AUDIO TRANSFORMERS

LL & LR SERIES



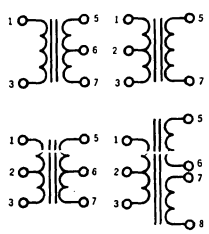


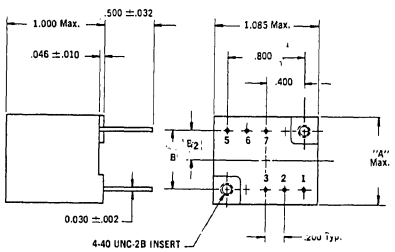
Series	A	B	C
LL	.600	.590	.590
LR	.925	.800	.710

These tiny, versatile "LL" transformers are provided with .020 risers and 0.1 grid spacing for printed circuit board applications and are manufactured to MIL-T-27, Grade 5, Class S specifications.
Response: ±1 db 200 to 50,000 Hz
Distortion: 10% max. at rated power, 200 to 50,000 Hz
Weight: 0.4 oz.

These miniaturized "LR" transformers are manufactured to MIL-T-27, Grade 5, Class S specifications and are ideally suited for a wide range of printed circuit applications.
Response: ±1 db 200 to 20,000 Hz
Distortion: 10% max. at rated power, 200 to 20,000 Hz
Weight: 1.0 oz.

LW & LY SERIES



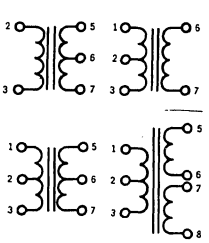


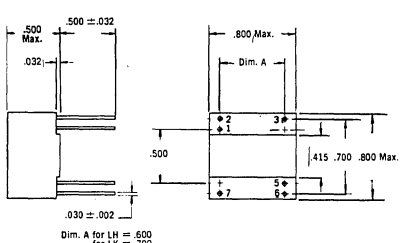
Series	A	B	B_2
LW	.900	.600	.300
LY	1.125	.800	.400

"LW" Series transformers are manufactured to MIL-T-27, Grade 5, Class S specifications. Riser areas and 0.1 grid spacing make these units ideal for printed circuit board applications.
Response: ±1 db 100 to 10,000 Hz
Distortion: 1.5% max. at 60 mW, 200 to 10,000 Hz
Weight: 2.0 oz.

"LY" Series transformers are highly compact, efficient units with power output ratings to 7.5 watts. These transformers are manufactured to MIL-T-27, Grade 5, Class S specifications.
Response: ±1 db 60 to 10,000 Hz
Distortion: 1% max. at 250 mW, 200 to 10,000 Hz — 10% max. at rated power, 200 to 10,000 Hz
Weight: 2.5 oz.

LH & LK SERIES





Series	A
LK	.700
LH	.600

"LH & LK" Series transformers are the ultimate in compactness. Designed to meet MIL-T-27, Grade 5, Class S.
Response: ±1 db 200 to 10,000 Hz
Distortion: 10% max. at rated power, 200 to 10,000 Hz
Weight: .75 oz.

TRANSFORMERS

400 Hz MINIATURE POWER TRANSFORMERS

Reference for all Industrial and Military Standard 400 Hz Miniature Power Transformers

These 400 Hz Miniature Power Transformers are selected for use in all Military and Industrial applications requiring high performance in the smallest possible package size. They conform to all of the requirements of MIL-T-27, Class S (−55°C to +130°C). The minimum continuous operating life expectancy is 10,000 hours. This series is available having power ratings of 0.5 VA through 25 VA. The primaries are 115 Vrms with secondary voltages ranging from 5 Vrms through 300 Vrms.

It is recommended that these transformers be specified for all applications where space, weight, and cost effectiveness are prime considerations.

TRANSFORMERS

400 Hz MINIATURE POWER TRANSFORMERS

Reference for all Industrial and Military Standard 400 Hz Miniature Power Transformers

PHYSICAL SPECIFICATIONS

Size: Sizes for Standard VA Types are given in Table I, and Outline Drawings.

Construction: MIL-T-27, Grade 5; Black Epoxy Encapsulated.

Terminals: Printed circuit pins — tinned brass.

Terminal Strength (Method 211 of MIL-STD-202, Test Condition A): 2.0 pounds.

Marking: Includes MIL-T-27 Type Designation, winding ratings, maximum working voltage, schematc, Torotel name, and part number.

ENVIRONMENTAL SPECIFICATIONS

Operating Temperature Range: −55°C to +130°C (ambient plus temperature rise).

Altitude: 70,000 feet, maximum.

Vibration: MIL-STD-202, Method 204, Test Condition D.

Life Expectancy: 10,000 hours minimum.

Other Environmental Specifications: In accordance with MIL-T-27, Grade 5 Class S, Family 03.

ELECTRICAL SPECIFICATIONS

Primary Voltage: 115 volts rms ±10%.

Frequency: 400 Hz ±5%.

Secondary Voltage: See Table II.

Secondary Voltage Tolerance: ±3% at full load and 115 volts, 400 Hz applied to primary.

Electrostatic Shielding (Schematics S and Y): 5 to 1 minimum voltage ratio at 20 KHz.

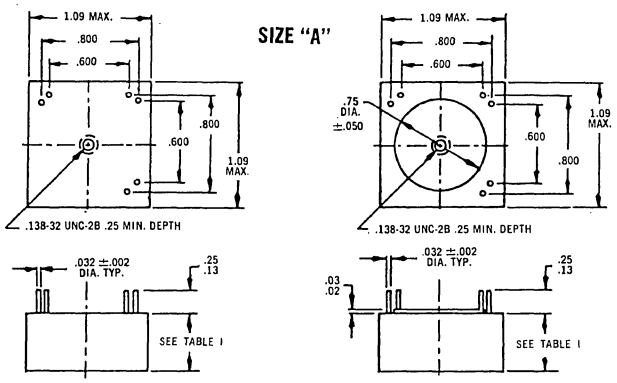
Phase Shift: 1.0 electrical degree between primary and secondary voltage at rated load, maximum.

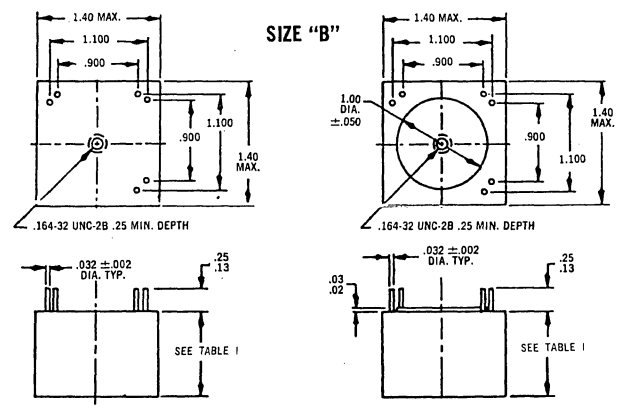
Insulation Resistance: 10,000 megohms minimum at 500 VDC.

Dielectric Strength: At sea level—2.8 times the maximum working voltage. At reduced barometric pressure—1.25 times the maximum working voltage.

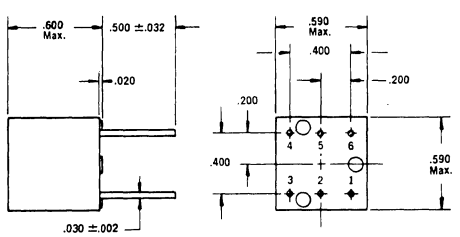
Mech. Tol. = ±.005 unless indicated.

PACKAGE STYLE E **PACKAGE STYLE P**





PACKAGE STYLE S



MECH. TOL. FOR STYLE "S" = ±.010 UNLESS INDICATED.

TRANSFORMERS

PC MOUNT POWER TRANSFORMERS

Torotel standard PC mount transformers are designed for 115 Vrms 60 Hz input and are generally usable to above 400 Hz. Voltages listed in table are standard values but transformers can be furnished with other voltage and current ratings. Transformers are available with Channel Frame mounting, either tab style, (Type C) twist prong (Type B) or without Frame (Style A).

Also custom designed power transformers and audio transformers are available in these and other types and sizes upon special request.

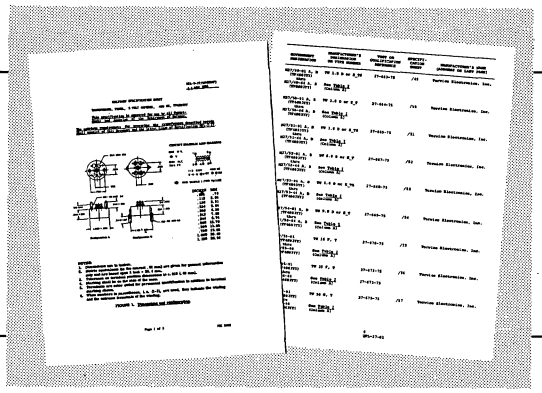
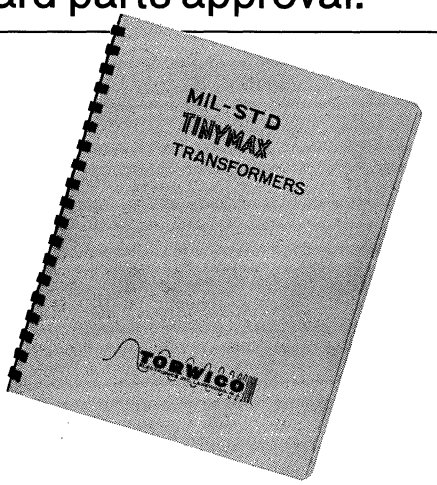
TORWICO ELECTRONICS INC

LEADER IN MAGNETIC COMPONENTS

TINYMAX® Transformers have QPL Status on Qualified Product List 27.



Now you can specify Military Standard Transformers without the need for Qualification Testing or requests for non-standard parts approval.



These miniature transformers are of toroidal construction and offer a size and weight reduction when compared to conventional laminated and "C" core designs. Yet, the prices on these custom engineered transformers are competitive with off-the-shelf stock items.

So, when you need a 115V, 400 Hz transformer having a specific secondary voltage don't settle for an off-the-shelf item that may only approximate your requirement. Torwico has over 2,000 MIL/STD units and an almost infinite selection of STD TINYMAX.

What's more, Torwico offers fast delivery and competitive pricing. Selection, delivery and price--Torwico has it all.

STD TINYMAX -- MIL-T-27, Grade 4 and Grade 5, Class S, 115 volt, 400 Hz transformers available in power ratings ranging from 1.5 VA through 250 VA, with an almost infinite combination of secondary voltages of 6V through 300V.

MIL-STD TINYMAX -- Grade 4 and Grade 5, Class S, 115 Volt, 400 Hz transformers. Reference M27/37 through M27/66. Over 2,000 choices of secondary voltages.

EXTENSION OF APPROVAL -- Any design selected directly from, or based, on our MIL/STD TINYMAX transformer may be qualified to MIL-T-27 by similarity.

PROCUREMENT NOTE -- Catalog information and cross referenced sheets may be obtained from the factory or for MIL-STD units, refer directly to specification sheets M27/37 through M27/66.

PROTOTYPE DELIVERIES -- A large assortment of TINYMAX transformers is always maintained in stock for immediate delivery. Others can be shipped within 10 days.

For a copy of Towico's MIL-STD TINYMAX catalog, contact your local Torwico representative. He'll show you why Torwico is the easy way to deal with military standards.

PRECISION TOROIDAL TRANSFORMERS — SCOTT "T" TRANSFORMERS

Trans American Transformer provides custom signal transformers with high accuracies over the full military temperature/environmental range. Our speciality is High Performance and Consistency in the smallest size. Your design or our design to your specifications.

These transformers are fully encapsulated P-C mount toroidal/laminated units. They are manufactured in accordance with Mil-T27D Grades 4 and 5. They have high input impedance and low output impedance combined with high transformation accuracy and minimum quadrature. These characteristics make these units particularly useful in solid state synchro to digital and digital to synchro converter applications.

Send for catalog T-101A

HIGH FREQUENCY SWITCHING POWER SUPPLY MAGNETICS

Switching power supply magnetics designed and manufactured to meet all high reliability military requirements. Typical circuit designs include push pull, forward converter and flyback. Power requirements from milliwatts to approximately 1 kilowatt. Units available in Grade 4, 5, 6 and temperature Class S through U.

Send for catalog T-202A

POWER TRANSFORMERS 60-400 Hz

Designed and built to meet the specifications of Mil-T-27D, high reliability and long life are major features of these units. All designs available in Grades 4, 5, 6 and temperature Class S through U. Low profile and PC mount toroidal and laminated units provide the absolute smallest size/volume for any system requirement.

* Windings may be connected in series to obtain their combined voltage when properly phased. Current will be equal to the current of the lowest winding. Example: Two 6.3V windings @ 2A in series would be 12.6V @ 2A. Windings may also be connected in parallel to obtain combined current. Example: Two 6.3V windings @ 2A in parallel would be 6.3V @ 4A. ¶ Tapped primary 105-115-125. ‡ 60 cycle operation.

SPLIT PACK

Split Bobbin Transformer

Triad-Utrad's new Split Pack split bobbin transformer increases the depth and versatility of Triad's already extensive line of PC board mounted transformers. Like Triad's recent Flat Pack series, the Split Pack transformers are nonconcentrically wound—with primary and secondaries wound side by side, unlike the secondary-on-top-of-primary windings of standard PC board transformers. Split bobbin winding and low capacitive coupling eliminate costly electrostatic shielding. The Split Pack's unique construction makes possible higher HiPot testing—2,500V rather than 1,500V.

Phone: (219) 356-6500 • TWX: 810-333-1532

Triad-Utrad's Flat Pack power transformer is designed to meet the needs of low clearance printed circuit board and solid state power designs. These new units can also be used for control and instrumentation applications. Voltages and currents were chosen for widely used power applications and could be used in single or dual output supplies. The Triad-Utrad Flat Pack has a unique construction feature allowing them to pass a 2000V HiPot test.

Specifications:
Flat Pack = allows 1" card spacing for 6VA units or 1-1/4" for 12VA units
Dual Primaries = 115/230V, 50/60HZ
Split Bobbin = side by side windings reduce interwinding capacitance and eliminates the need for a static shield
Semi-Toroidal Construction reduces radiated magnetic fields and results in balanced windings
Hi-Pot = 2000V RMS is standard
Terminals are precision spaced

Selection Guide for TRW Transformers

STANDARD AUDIO TRANSFORMERS AND INDUCTORS

Product Series	Description	Frequency Range	Max. Power
Military Types: Grade 5, Metal Encased			
BIT-250	Ribbon style Kovar leads; compatible with transistor and IC flat pack styles. Transformers and inductors.	300 Hz to 250 kHz	80 mW @ 1 kHz
DO-T	Flexible 1½" Dumet leads. Ultraminiature transformers and inductors for transistor circuitry.	300 Hz to 20 kHz	500 mW @ 1 kHz
DO-T200	Plug-in — TO-5 pattern. Ultraminiature transformers and inductors for transistor style circuitry.	300 Hz to 20 kHz	100 mW @ 1 kHz
DI-T	Flexible 1½" Dumet leads. Ultraminiature transformers and inductors for transistor circuitry.	400 Hz to 100 kHz	500 mW @ 1 kHz
DI-T200	Plug-in — TO-5 pattern. Ultraminiature transformers and inductors for transistor circuitry.	400 Hz to 100 kHz	500 mW @ 1 kHz
TOP-1000	Plug-in, .50 D by .35 High	300 Hz to 75 kHz	.6 W @ 1 kHz
TOP-2000	Plug-in, .50 D by .5 High	150 Hz to 75 kHz	1 W @ 1 kHz
TOP-3000	Plug-in, .750 D by .52 High	50 Hz to 30 kHz	2 W @ 1 kHz
Military Types: Grade 4, Metal Encased			
H	**Transformers** — Full line of input, interstage and output types for transistor and tube use. Chopper type transformers. **Inductors** — Range from .4 mHys to 450 Hys.	30 Hz to 20 kHz	1 mW to 10 mW
FHA	Low profile audio unit, straight 1" pin terminals for plug-in mounting.	300 Hz to 20 kHz	100 mW @ 300 Hz
W (Mil Std)	Qualified to Mil Stds. print No.'s M27/3-01A to M27/11-01A. Inputs, interstage and output types.	300 Hz to 10 kHz	2W @ 300 Hz
Military Types: Grade 5, Molded			
SSO-P	Transistor and tube type transformers. Input, interstage, output and inductors.	300 Hz to 20 kHz	100 mW @ 300 Hz
SO-P	Transistor and tube type transformers. Input, interstage, output and inductors.	200 Hz to 20 kHz	250 mW @ 200 Hz
MTC	Plug-in, MIL-T-27, transformers for telephone interconnect and hybrid action.	300 Hz to 4 kHz	10 mW
Industrial Types: Cased, Non-Hermetic			
I-DI-T	Industrial versions of standard DI-T types.	400 Hz to 100 kHz	500 mW
I-DO-T	Industrial versions of standard DO-T types.	300 Hz to 20 kHz	500 mW
O	Excellent quality compact audio transformers and inductors, full range of transistor and tube applications	300 Hz to 20 kHz	1 Watt
A	Ultra compact wideband transistor and tube type transformers and inductors, hybrids and choppers.	10 kHz 50 kHz	5 Watt
LS	Linear standard transformers. Hi-fidelity, highest quality. Tube and transistor types. Includes low dist. high efficiency, shielded types, hybrid transformers. Broadcast quality.	7 Hz to 50 kHz	Low level to 50W
Industrial Types: Open Frame, Non-Hermetic			
SSO	Flexible lead type transformers and inductors for tube and transistor application. Channel frame available.	300 Hz to 20 kHz	100 mW
SO	Small, broadband type, flexible lead type. Transistor and tube types. Channel frame available.	200 Hz to 20 kHz	250 mW
PC	Plug-in types for mounting on PC boards. Same electrical characteristics as standard ouncer, sub-ouncer and sub-sub-ouncer lines.	100 Hz to 20 kHz 200 Hz to 20 kHz 300 Hz to 20 kHz	1W 250 mW 100 mW
TC	Plug-in and lead type transformers and inductors for telephone interconnect	100 Hz to 10 kHz	1 mW to 10 mW

STANDARD POWER TRANSFORMERS AND INDUCTORS

Product Series	Description	Frequency	Power Range
Military Types			
DO-T400	Flexible lead ultraminiature power transformer. Hermetically sealed to MIL-T-27D Grade 5, Metal Clad.	380 Hz to 2400 Hz	400 mW
FP	MIL-T-27, Grade 5, low profile power transformers. 115V pri; secs deliver 2 to 30V.	400 Hz	10W to 30W
LL	MIL-T-27 Inductors Grade 5. Axially leaded units. .365 D x .49 L.	.25 Amps to 3 Amps	30 μHys to 5000 μHys
H	Inductors. Hermetically sealed inductor to MIL-T-27D Grades 4 & 5.	.017A to 30A*	0.4 mHy to 450 Hyst
H	Hermetically sealed to MIL-T-27D. Grades 4 & 5. Transistor, filament, inverter and plate type. Metal clad & molded.	50 Hz to 2500 Hz	1.2 VA to 5.0 KVA
HIT	Ultra-shielded power line isolation transformers. Hermetically sealed to MIL-T-27D. Grade 4. 0.1 mfd or less, effective coupling.	50 Hz to 400 Hz	50W to 1200W
MET	Hermetically sealed metal clad to MIL-T-27D Grade 4. For 400 Hz application to give min. size. Transistor, filament, universal types.	380 Hz to 2400 Hz	1.4W to 240W
N	Mil. St'd. filament & plate transformers per MIL-T-27D. Grade 4 (ruggedized) construction.	50 Hz to 400 Hz	7.5W to 400W
NV	Inverter transformer, miniature. Hermetically sealed to MIL-27D, Grade 4, Class V. Multiple outputs.	10 kHz, 20 kHz, 50 kHz	32.5 VA to 89 VA
PH/PV	MIL-T-27 3-phase transformers; Grades 4 & 5. Electrostatically shielded isolation and multi-output transformers.	50/60 Hz	25W-360W
SRC-10	Transformer, hermetically sealed to MIL-T-27D, Grade 4. Precision Scott-T reference.	60 Hz to 400 Hz	6 VA
SRA	Low inductance, high current miniature molded inductors.	up to 100 kHz up to 15A*	8 μHys to 1250 μHyst
SRB	Low inductance, high current miniature molded inductors.	up to 100 kHz up to 15A*	20 μHys to 3000 μHyst
SRC	Low inductance, high current miniature molded inductors.	up to 100 kHz up to 13.6A*	60 μHys to 10,000 μHyst
Industrial Types			
CG	High quality. Plate Transformers. Designed to AIEE. Rugged drawn steel cases. Vacuum impregnated & compound filled.	50/60 Hz	100 VA to 4950 VA
FT	Channel frame, filament/transistor transformers. For 2.5 VCT to 48 VCT. From .04A to 10A.	50/60 Hz	7.5 VA to 48 VA
PF	For photoflash and similar applications. Line and transistor inputs. Power, inverter & trigger types.	Trigger DC Inverter 4½ VDC 50/60 Hz	6 KV pulse to 15 KV pulse 40 Watt-Sec
R	(Inductors). Replacement types, channel frame construction. Vacuum sealed to prevent corrosion.	30 mA to 5A*	2 mHys to 5 Hyst
R	Replacement type line adjusting and isolation transformers. High reliability. Vacuum sealed to prevent corrosion. Housed in protective shells.	50/60 Hz	50 VA to 2500 VA

IN ADDITION TO THE NEEDS met by TRW stock audio and power components listed on this page, there are many unique applications that can be met with special units.

Our catalog audio line, for example, represents close to 500 commercial and MIL grade components covering a frequency band from 5 Hz to 250 kHz, at levels of mWs to 250 W and ranging in weight from 1/20 oz. to 16 lb. Our custom designs — which often can be MIL qualified by similarity — cover an even broader range of frequencies and power ratings.

Custom power designs range from milliwatts to 100 kVA capacity. They comprise temperature ranges from Class R (105°C) to Class U (higher than 170°C.) All types of mechanical and electrical configurations are available, and special engineering emphasis is placed on individual requirements.

Our engineering and laboratory facilities are uniquely equipped to handle customer problems in tough design areas such as shielding, corona, reliability, high voltage or miniaturization. Facilities are also available to produce sample orders.

TRW INDUCTIVE PRODUCTS DIVISION, 150 Varick Street, New York, NY 10013, Telephone: (212) 255-3500, TWX: 710-581-2722

The BIT-250™ Line—An Advanced Development in Transformer Technology

PACKAGING

Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions, and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

RELIABILITY

Cylindrical bobbin-winding techniques eliminate corner stress normally found in fine-wire windings of conventional rectangular structures.

Lead arrangements and terminations have been designed to maximum reliability under thermal shock and temperature cycling.

FLEXIBILITY

The stock units shown on facing page are designed to afford maximum flexibility of application.

Transformers are 7-terminal types, with center-tapped primaries and split secondaries. When connected in parallel, split-winding secondaries provide ¼ the impedance and twice the DC current capability as series connections.

Inductors in the stock line include both single-winding and split-winding types.

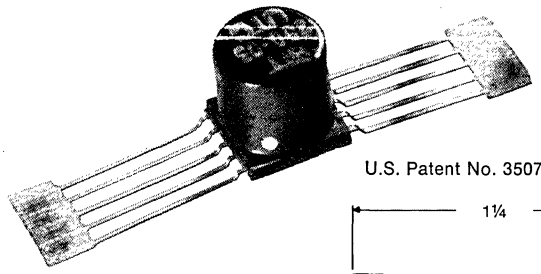
SPECIALS

BIT-250's not found in the stock line will be designed to customer's requirements.

- Special electrical parameters
- 10 or more leads
- Operation to 130°C per MIL Class S.

NOTES

- **FREQUENCY RESPONSE** ±2 db, 300 Hz — 250,000 Hz, @ 1 MW Ref. level.
- **DIELECTRIC STRENGTH** tested @ 200 V RMS.
- **MIL SPECS** To complete MIL-T-27D Specs. Metal encased, ruggedized, Grade 5, Class R.
- **SHIELDING** All units electromagnetically self-shielded.
- **LEAD MATERIAL** Tinned ribbon-style, solderable and weldable — MIL-STD-1276C.



U.S. Patent No. 3507039

DO-T® Transistor Transformers and Inductors

PACKAGING

Hermetically sealed. A TRW Inductive Products pioneered structure. The bobbin is completely rigid eliminating stress and wire movement. The turns are circular in shape rather than square, eliminating turn corner stress and effecting uniform wire lay. No tapes are employed in connecting coil wire and external leads. They are rigidly anchored in secure terminal board fashion providing strain relief.

The leads used on the stock DO-T transformers are insulated solid .016 diameter Dumet leads. For plug-in type see page 9.

MIL SPECS To complete MIL-T-27D Specs. Units are fully ruggedized, hermetically sealed, **metal cased** to MIL Grade 5, Class R.

ALTITUDE 150,000 ft. max.

PERFORMANCE

The radically designed TRW/UTC DO-T Family (see pages 6-11) transistor transformers provide unprecedented power handling capacity and reliability, coupled with small size. Electrical parameters and areas of application exceed conventional transformer capabilities.

Curves on this page and on pages 8 & 9 indicate their performance compared to that of similar size units now on the market. These curves show representative performance of all DO-T's and DI-T's except 200,000 ohm units. Higher performance is obtained when used in push-pull with balanced DC. Other manufacturers' comparative performance is shown on these curves to put unjustified claims in perspective. For example, the TRW/UTC DO-T10 delivers 100 mW @ 5% distortion @ 300 Hz. **Identical measurements** were made on contemporary manufacturers' equivalent, rated at 50 mW @ 300 Hz. Actual delivered power was under **1 mW @ 7½% distortion @ 300 Hz.**

FREQUENCY RESPONSE ±3 db, 300 Hz to 20 kHz at 1 mw.

WORKING VOLTAGE 50 volts peak.

APPLICATION

Units can be used for different impedances from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve low frequency response and level ratings . . . higher source will reduce them. Units may be used reversed, input to secondary. The frequency response curve on this page is shown to 20 kHz. This descriptive curve is not meant to be restrictive. Units can be used at frequencies well above 20 kHz. Satisfactory applications for frequencies up to and above 250 kHz have been developed.

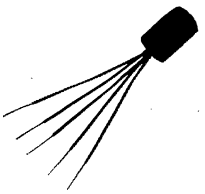
PULSE APPLICATION In pulse coupling impedance matching applications, (when measured with a 30 microsecond input pulse voltage wave), typical values for these transformers are: 5% or less droop, zero overshoot and less than 10% backswing.

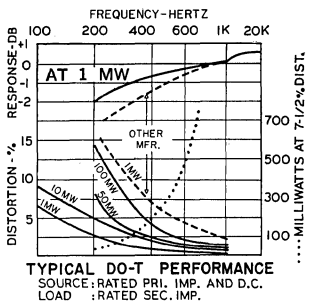
RELIABILITY The exceptional reliability of DO-T family units, inherent in their unique structure, has been dynamically proven in the field.

SHIELDING Hipermalloy electromagnetic shield available from stock for all DO-T family units. Order TRW P/N DOT-SH, or DIT-SH.

DILESIL HIGH TECHNOLOGY DO-T FAMILY TRANSFORMER

- A High Reliability version of the DO-T and DI-T line is available on special order. This alternate construction is designated DILESIL.
- DILESIL construction is intended for fine wire DO-T, DI-T transformers which are used in environments that produce prolonged thermal stress, far exceeding the thermal cycling specification requirements of MIL-T-27.
- DILESIL DO-T's have been approved and qualified by the Defense Electronic Supply Command and have appeared on QPL-27 for MIL-T-27C. DILESIL DO-T's are presently being requalified to MIL-T-27D.
- DILESIL construction is recommended for applications requiring extreme reliability under thermal stress. Thousands of these parts have been used in Hi-Rel Military and NASA applications for the past fifteen years.
- DILESIL DO-T and DI-T transformers are electrically identical to standard DO-T and DI-T parts. However, DILESIL parts are slightly larger than equivalent DO-T and DI-T parts.
- Contact the TRW Inductive Products engineering department for more detailed information.





TYPICAL DO-T PERFORMANCE
SOURCE: RATED PRI. IMP. AND D.C. LOAD : RATED SEC. IMP.

SPECIALS

For indication of possibilities of DO-T Family units custom built to your special requirements, contact the TRW Inductive Products engineering department.

The stock DO-T Family are Grade 5, Class R units, for a maximum operating temperature of 105°C in accordance with MIL-T-27D Specs. On special order they can be designed to Class S requirements of MIL-T-27D (130°C maximum operating temperature). No additional life expectancy is gained by ordering Class S insulation systems for applications in the vicinity of Class R temperatures. Where the operating temperatures are above 105°C, the use of Class S insulations will afford greater life expectancy.

Special units with electrical modifications of changed lead lengths, modified impedance ratios, and additions of electrostatic shields, etc., are available for all DO-T Family units.

Stock units cover general purpose applications. For specific applications cost reductions may be effected.

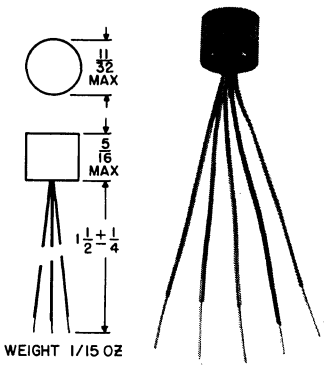
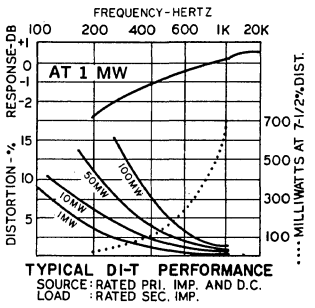
WEIGHT 1/10 OZ.

See Catalog page 29 for TRW/UTC's line of 400 cycle DO-T Transformers

‡ maDC shown is for single ended usage. For push-pull, maDC can be any balanced value taken by .5W transistors.
Where windings are listed as split, ¼ of the listed impedance is available by paralleling the winding.
* Includes electrostatic shield.
† DO-TSH2 fits over DO-TSH.

DI-T® Transistor Transformers and Inductors





TYPICAL DI-T PERFORMANCE
SOURCE: RATED PRI. IMP. AND D.C. LOAD : RATED SEC. IMP.

FREQUENCY RESPONSE ±3 db, 400 Hz to 100 kHz at 1 mW.

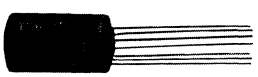
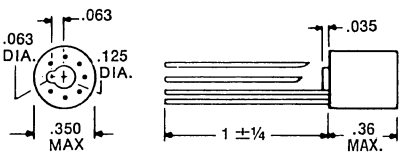
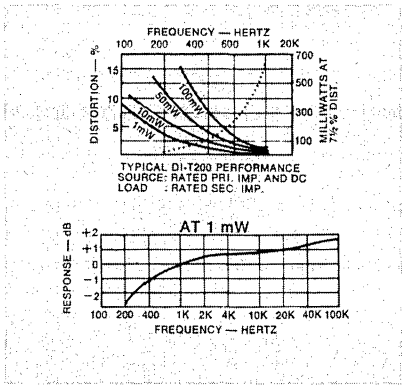
DO-T200 and DI-T200 Series Transformers and Inductors



HEIGHT 9/16 FOR DO-T

Weight: 1/15 OZ. DI-T
1/8 OZ. DO-T





PACKAGING Metal encased. DO-T family unit. See Catalog page 6.

MIL SPECS To complete MIL-T-27D Specs. Ruggedized, metal encased to MIL Grade 5, Class R.

FREQUENCY RESPONSE At 1 mW ±3 db, 300 Hz to 20 kHz, DO Type; ±3 db, 400 Hz to 100 kHz, DI Type.

TERMINALS Leads are .016 Dumet wire, tinned, and may be either welded or soldered. They are uninsulated and are spaced on a .1″ radius circle, conforming to the termination pattern of the "TO-76" cased semiconductors and micrologic elements.

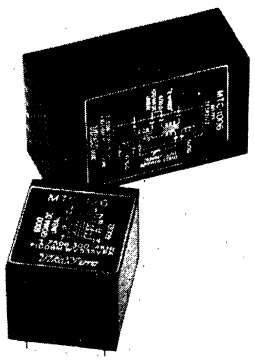
Telephone Interconnect Transformers

MTC Series



APPLICATIONS MTC (MIL-T-27D) transformers, designed for coupling applications feature unbalanced DC current ratings of up to 120 mA — higher than competitive units — while longitudinal balance per FCC 68.310 specification is greater than 60 dB.

The 2-wire to 4-wire hybrid transformer is noteworthy in that it can carry up to 100 mA unbalanced DC current through its primary, and has greater than 60 dB trans-hybrid loss over the 300-Hz to 4-kHz frequency band.

Dielectric strength exceeds 1500 volts AC.

HIGH-Q-TOROID MICROCRYSTALLINE WAX IMPREGNATED SUPPLIED WITH 4″ LEADS

APPLICATIONS The TC Series of plug-in transformers is ideally suited for telephone interconnection applications. These low-profile units meet or exceed all modem and voice transmission impedance-matching requirements. They feature low distortion and wide frequency response, and are specially designed for wave soldering to printed circuit boards.

Type No.	Application	Primary Impedance (Ohms)	Max Unbalanced DC Current (mA)	Secondary Impedance (Ohms)	Size

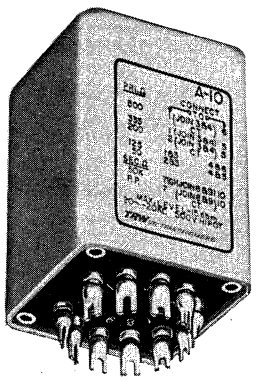
Ultra-Compact™ Audio Units



TYPE A CASE 1½" x 1½" x 2" h.
Unit Weight: ½ lb. Mounting Holes 1$\frac{3}{32}$" sq.
Screws: 4-40. Cutout: 1⅜" dia.

PACKAGING High quality rugged die cast zinc alloy case with both top and bottom mounting facilities. Asterisked items (see Type No.) have multiple alloy shield.

APPLICATIONS Compact commercial amplifiers and equipments.

APPLICATION NOTE Included in line are filament/transistor supply units.

FOR HERMETIC METAL CASED MIL TYPES See Catalog page 15.

NOTE All units except those carrying DC in primary employ a true humbucking coil structure, which provides electrical balance and effects good inductive shielding.

HIPERMALLOY MAGNETIC SHIELD

APPLICATION Ideal for ultra low level applications such as microphone input, instrumentation, low cross talk multi-channel mixing, and medical.

SHIELDING Provides approximately 20 db of shielding.

INSTALLATION Slips over standard "A"-line case.

SIZE 1$\frac{19}{32}$" sq x 2$\frac{1}{32}$" H

Subouncer™ Units

TYPES

SO — Open frame type with flexible leads.

PC-SO — Printed circuit board mounting open frame (new item).

SO-P — Hermetically sealed type to complete MIL-T-27D Specs, Grade 5, Class R.

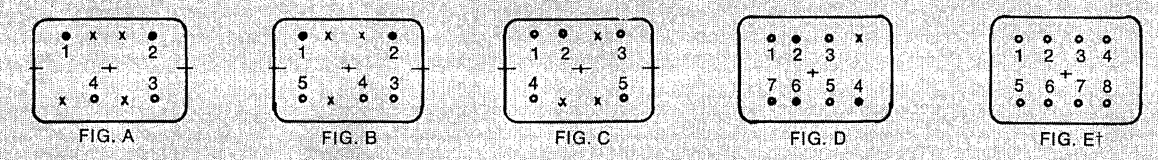
NOTES

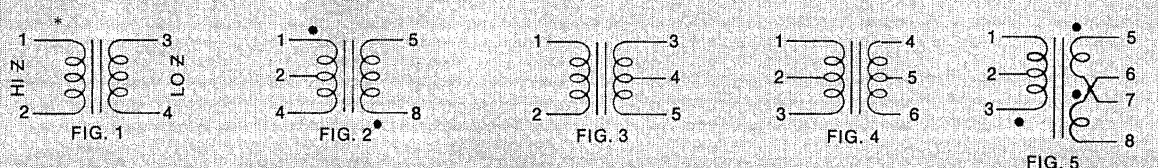
ON PERFORMANCE CHARACTERISTICS

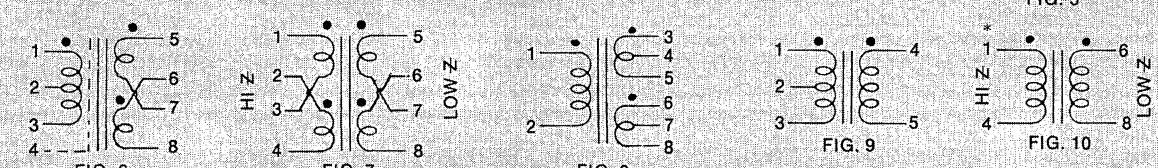
- To present the widest range of application, matching impedance values are listed in order of increasing impedance value without regard to the traditional designation of primary or secondary winding.
- The primary and secondary winding can be used arbitrarily as the input or output.
- Impedance values written one above the other indicate a range of matching impedances over which the parts will give satisfactory performance as long as the impedance ratio is maintained.
- Impedance values separated by a slash indicate the series and parallel connected impedance value of the windings.
- PC-SO Types have terminal arrangements that permit the connection of series or parallel windings by bridging adjacent terminals (see Fig. 14). This eliminates unwanted cross overs on the PC board when split is available.

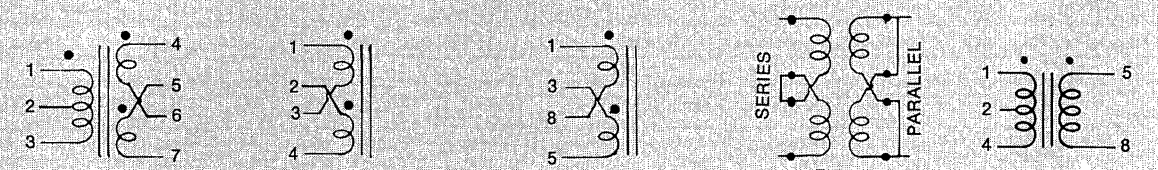
(E.T. is the maximum voltage, time product for a single pulse applied to the winding.)

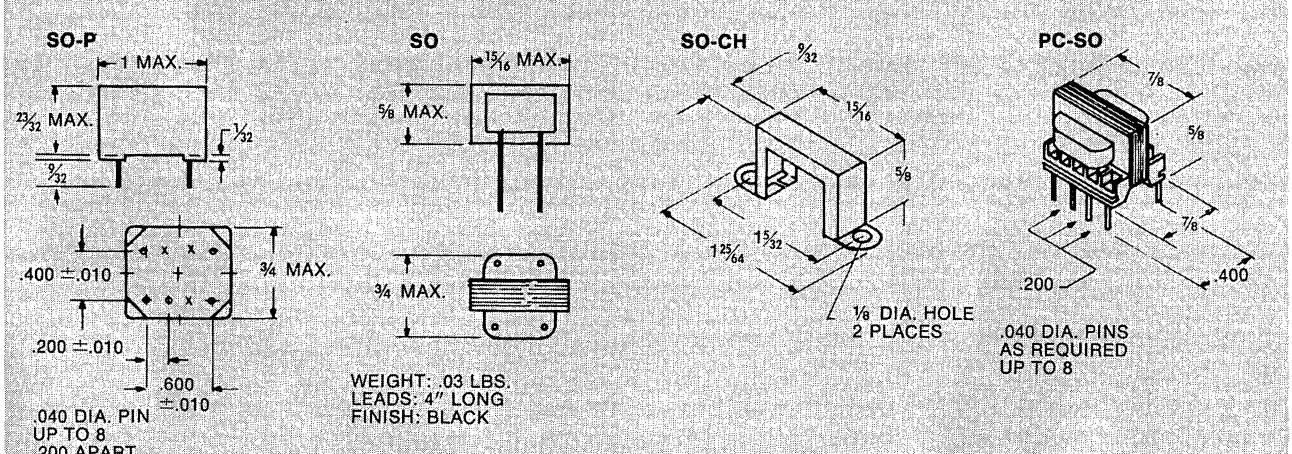
PIN ARRANGEMENT (Pins not used are removed. These are indicated by "x.")











† Pin numbers not shown in schematic will be missing. * On PC-SO-2 and SO-2P, Hi Z and Lo Z are reversed.

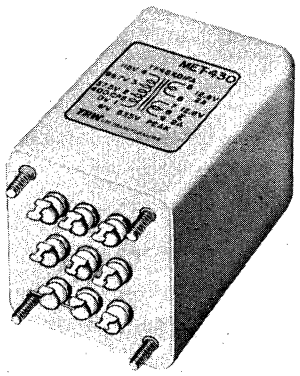
Universal Transistor Supply Transformers



PACKAGING Hermetically sealed. Drawn metal case to MIL Grade 4.

MIL SPECS To complete MIL-T-27D Specs. MIL Type TF4S03 plus two letter case code. H-915 is qualified as M27/184-01. H-935 is qualified as M27/157-01. H-925 is qualified as M27/156-01.

NOTES: Chart below shows the secondary AC voltages available, and the approximate DC voltages resulting, in typical capacitive filter silicon rectifier circuits (at the indicated currents). Since the capacitor following the rectifier affects the DC, voltage values used (in 1000 mfd) are shown in parenthesis ( ) after each current rating.

Primary taps can modify nominal AC voltages by −6%, +6%, and +12%.

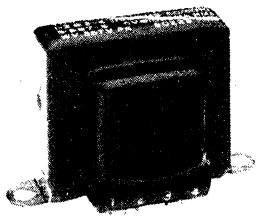
Plug-In IC Power Transformers

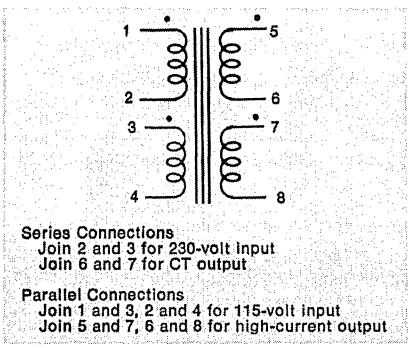
TPC Series



APPLICATIONS The TPC Series of plug-in power transformers is ideally suited for low-voltage, high-current IC feed applications. These units are also recommended for use in full-wave centertap and full-wave bridge rectifier circuits.

MIL SPECS To complete MIL-T-27D Specs, Grade 5, Class S.

RATINGS Based on approximately 20% regulation from no-load to full-load RMS conditions.



Series Connections
Join 2 and 3 for 230-volt input
Join 6 and 7 for CT output

Parallel Connections
Join 1 and 3, 2 and 4 for 115-volt input
Join 5 and 7, 6 and 8 for high-current output

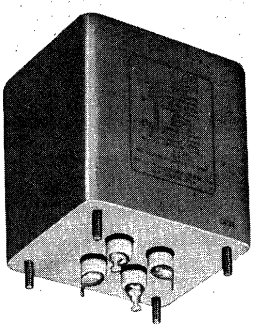
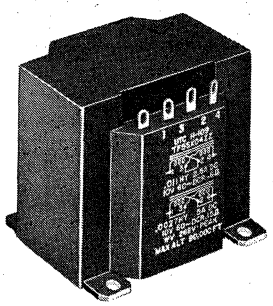
Filter Inductors

METAL CASED



MOLDED



PACKAGING Hermetically sealed. H-70 group — Metal encased. H-105 group — molded.

APPLICATIONS Transistor supply units have two windings for wide flexibility. All are swinging types to enhance power supply regulation.

CONSTRUCTION Grain-oriented core materials impart highest permeabilities, producing exceptionally high inductance for size.

MIL SPECS To complete MIL-T-27D Specs. H-70 group (metal cased) Grade 4, Class S. H-105 group (molded) Grade 5, Class S.

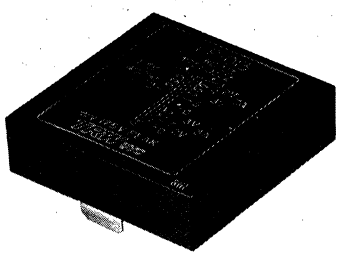
400 Hz Power Transformers
Low Profile MIL-T-27 Grade 5 Class S

FP Series



APPLICATION Offering significant cost and size advantages over competitive low-voltage, high-current toroids, FP Series 400 Hz power transformers are wide applicability types which will fit many modern circuit needs.

RATINGS Three power levels are available: 10, 20 and 30 watts. Within each power rating, three different winding and secondary tap arrangements are provided to cover a total voltage range from 2 to 30 volts. Since performance specifications are based on maximum-voltage, full-winding use, slight power derating is required when employing lower voltage taps, to keep current density normal.

CONSTRUCTION FP transformers feature a semi-toroidal, hum-bucking, self-shielding construction. Integral electrostatic shields are terminated in two unique mounting tabs. The units are of a low-profile design — .62 inches high — to fit "sandwich board" shallow drawer requirements. "PC" terminal types on all units.

MIL SPECS To complete MIL-T-27D specifications. MIL Type No. TF5SO3ZZ.

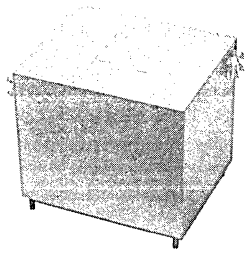
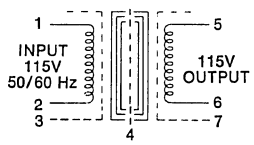
HIT™ Series Ultrashielded Power-Line Isolation Transformers





SIMULATES BATTERY OPERATION FOR CRITICAL CIRCUITS REQUIRING EXTREME ISOLATION FOR POWER LINE.

The effective capacity coupling between primary and secondary windings is less than 0.1 pf. Individually terminated shields allow maximum circuit design flexibility to further reduce this minute capacitance. Input and output terminals are on opposite sides of housing for excellent line/load isolation.

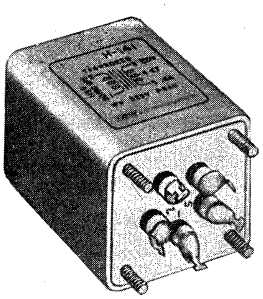
Transistor Supply Transformers



Primary 115 V 50/60 Hz (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.C.T.). Choke input DCV is based on 10% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding.

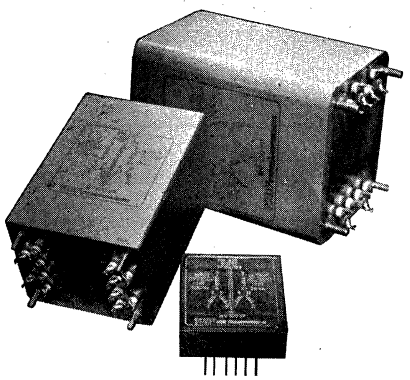
PH and PV Universal Three-Phase Transformers



PH Series three-phase transformers are electrostatically shielded isolation transformers constructed to MIL-T-27 specifications.

Two Grade 4 metal-cased PH units are intended for 50/60-Hz, 120/208-volt Wye or 120-volt Delta inputs. One is rated at 65 watts, the other at 360 watts.

A 25-watt, molded Grade 5 PH unit is designed for 400-Hz, 115/200-volt Wye or 115-volt Delta inputs. All PH Series primaries and secondaries can be connected in either Wye or Delta.

PV Series three-phase transformers are identically packaged and suggested for similar inputs, but feature windings arranged and tapped to provide low-voltage, high-current inputs for full-wave bridge circuits.

Two Grade 4 metal-cased PV units for 50/60-Hz inputs provide 3.1 to 48 volts DC in 27 different voltage combinations, at currents ranging from 1.25 to 12.5 amps DC.

A Grade 5 molded PV transformer for 400-Hz use has the same voltage capabilities, but yields bridge circuit currents from 0.5 to 0.87 amp DC.

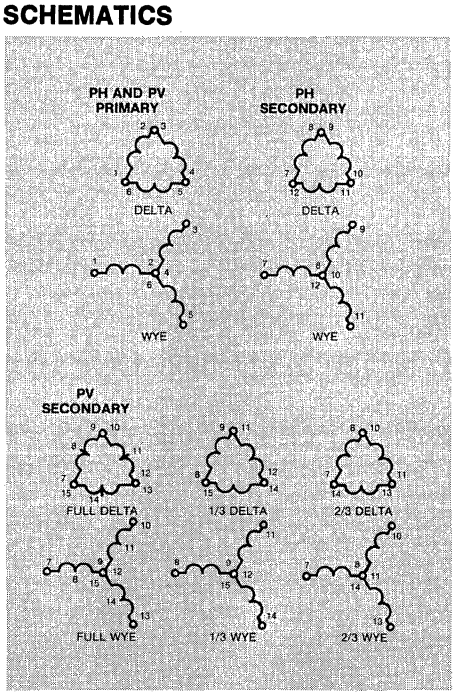
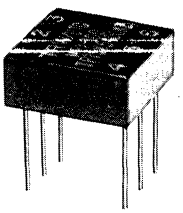
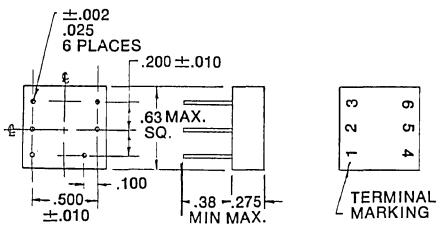
SCHEMATICS



Multiplex Data Bus MIL Std. 1553B Pulse Transformers





Type No.	Application	Ratio*
MPX-100	Isolation Transformer	1 CT: 1 CT
MPX-200	Coupling Transformer	1.41 CT: 1 CT
MPX-300	Coupling Transformer	1.25 CT: 1 CT

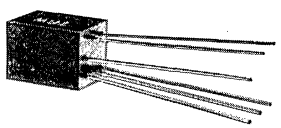
* Other ratios available on special order.

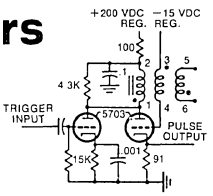
MIL SPECS MPX pulse transformers fully meet MIL STD 1553B Command/Response Multiplex Data Bus requirements. They also meet MIL-T-21038D Pulse Transformer Specs. MIL Type No. TP7SX( ) KZ.

PERFORMANCE MPX pulse transformers feature a high efficiency design for minimum losses. Common mode rejection ratio is greater than 45 db at 1 MHz. Input impedance is greater than 3000 ohms over the band from 75 KHz to 1 MHz at 1V rms. This series possesses exceptional waveform integrity: Rise time and fall time is less than 100 nanoseconds. Overshoot and ringing is less than ±1V peak. Droop is less than 20%.

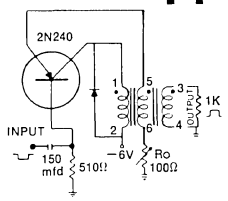
CONSTRUCTION All windings are centertapped for greater circuit application flexibility. The series is packaged in a printed circuit style configuration, with a low profile configuration of 0.275 inches maximum height.
Dielectric withstanding voltage is tested at 100 Vrms.

Plug-in Precision Miniature Wide Application Pulse Transformers





TEST CIRCUIT FOR PCH-45 TO PCH-57



TEST CIRCUIT FOR PCH-60 TO PCH-68

PCH pulse transformers are plug-in versions of our MIL-T-21038 line of pulse transformers H45 to H57 and H60 to H68.

PACKAGING Hermetically sealed. Epoxy cased.

CONSTRUCTION Designed to be used on PC boards with 0.1″ pin spacings. The pins are in a non-symmetrical pattern to provide foolproof insertion.

MIL SPECS Meet MIL-T-21038D Specs. All units are Grade 7, Class S, Life X.

APPLICATIONS Transistor blocking oscillators, SCR drivers, coupling and isolation. The PCH-45 through PCH-57 also can be used in transistor circuits.

NOTE The units are individually adjusted in the circuit shown for each group. Parameters are checked to give the required pulse widths.

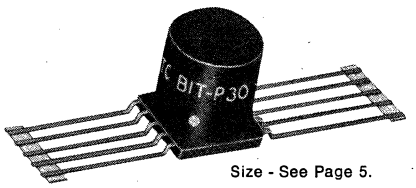
BIT-P™
High Performance Pulse Transformers



Size - See Page 5.

PACKAGING

Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions, and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

FLEXIBILITY

Stock units are designed for the standard blocking oscillator circuit shown as well as for coupling application. By interconnecting windings, a variety of primary to secondary ratios may be obtained.

NOTES

- **PULSE WIDTH** .05 μsec-100 μsec
- **DIELECTRIC STRENGTH** tested @ 200 VRMS
- **MIL SPECS** To complete MIL-T-21038D Metal encased, ruggedized Grade 6, Class R, Life X.
- **SHIELDED** All units electromagnetically self-shielded
- **LEAD MATERIAL** Ribbon-style, solderable to MIL-STD 1276C.

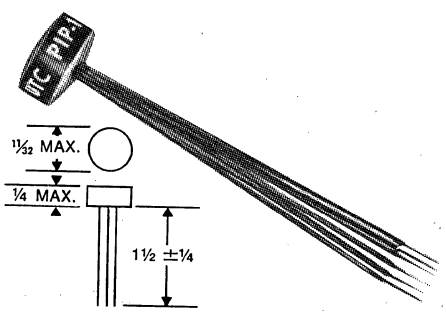
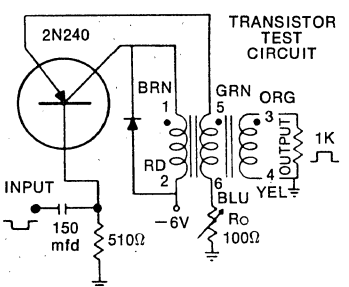
Precision Miniature Wide Application Pulse Transformers





PACKAGING

Hermetically sealed. DO-T family construction. See Catalog page 6.

MIL SPECS

To complete MIL-T-21038D Specs. Grade 6, Class R, Life X.

APPLICATION

Transistor. D.W.V. Test = 100V.

NOTE

All individually adjusted to parameters shown and checked in test circuit to give required pulse width.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet
